# PREFACE

**C**ivil Registration System is a continuous, permanent and compulsory recording of the occurrence and characteristics of vital events like Births, Deaths and Still Births. The main objective of the Civil Registration System is to record the annual change in population at National and State Level between two successive decennial Censuses. The registration of births and deaths has been made statutory through Registration of Births and Deaths Act 1969, which came into force in the State on 1<sup>st</sup> April 1970 vide Government of India Gazette Notification dated 21st March 1970 along with many other States.

The registering authorities at the local bodies are Secretaries of Grama Panchayats, Health Inspectors of Municipalities, Health Officers of Corporations and the Executive Officer of Kannur Cantonment. This report titled "Annual Vital Statistics Report 2021" provides an overview of the working of the Civil Registration System (CRS) in the state and presents a compilation of data on registered births, deaths, infant deaths and still births with rural-urban & sex-wise break-up based on Civil Registration Records.

The report was prepared by the Vital Statistics division of this office under the supervision and leadership of Smt. C. S. Lathakumari, Additional Director (General) & Additional Chief Registrar of Births & Deaths. The sincere efforts put in by Smt. Sindumol K.G, Statistical Assistant Gr.I, & Sri. Sabu B, Research Assistant and the timely advice and guidance given by Sri. C. Madhavan, Deputy Director and Sri. Anilkumar C, Assistant Director, Vital Statistics Division to bring out this publication is very much appreciated.

I would like to place on record my appreciation for the co-operation and valuable services rendered by the IKM, Local Registrars, District Registrars, Deputy Directors and staff of the District Offices of Economics & Statistics for bringing out this publication.

I hope that this report would immensely benefit to those who work in the Health sector and Researchers in the field. Suggestions for further improvement of the report will be highly appreciated.

# CHAPTER - I

## The Civil Registration System in Kerala

### Introduction

Registration of Births and Deaths is an important source for demographic data for socio-economic development and population planning. In India, the need for dependable demographic data was felt soon after independence heralding the era of Five Year planning. In the beginning, the registration of Births and Deaths started on voluntary basis and there was no uniformity in statistical returns resulting in both under registration and incomplete coverage. In order to unify the civil registration activities, the Civil Registration System (CRS) was introduced in India under the Registration of Births and Deaths Act (RBD Act), 1969. Civil Registration System may be defined as a continuous recording of vital events such as births, deaths and marriages occurring in a population. The basic uses of data from Civil Registration System are:

- Maintenance of permanent records on births and deaths as legal documents.
- Assessment of continuous changes in population.
- Evaluation of success of socio-economic programmes by indicators based on vital events and size of population.

As a matter of fact, requirement of this system as legal proof of births and deaths should in

itself be strong enough reason for any country to have a fully operational CRS. In India the registration of vital events and the administrative machinery for this purpose has been in existence for more than a century. It had been working under diversified Acts and executive instructions thus making it unsuitable for the independent India.

### 1.1 Registration of Births and Deaths Act 1969

This Act replaced the then existed laws and unified the system of registration throughout the country. Under the RBD Act 1969, registration of births and deaths is made compulsory. It has become mandatory on the part of head of house hold or his representative to report and register domiciliary vital events, for medical officers in charge of medical institution in respect of births and deaths occurring in these institutions. The Act also provided the statutory authority at Centre, State, District and local level. It prescribed definitions, principles, personnel and penalties connected with enforcement of the Act. It enabled Central Government to insist uniformity in registration procedures and bring out comparability in vital statistics registered in different parts of the country.

Statistics of births and deaths are compiled on the basis of Civil Registration System introduced under the Registration of Births and Deaths (RBD) Act, 1969. It is required under the Act that each vital event should be

reported within 21 days from the date of occurrence of the event. Registration of events beyond the prescribed period of 21 days is possible under the provisions of Section 13 of the Act.

### National Level

At national level the Registrar General of India (RGI) administers the CRS. He is empowered to issue general directions and take steps to co-ordinate and unify the activities of Chief Registrars of the States, who are the Chief Executive authority in the states for executing the provisions of RBD Act 1969 and the rules and orders made there under. They were responsible for coordinating, unifying and supervising the work of CRS within their respective State.

### State Level

The Registration of Births and Deaths Act 1969 (Central Act 18 of 1969) came into force in Kerala on 1<sup>st</sup> April 1970 by the Government of India Gazette notification dated 21<sup>st</sup> March 1970 along with many other states. The Kerala Registration of Births and Deaths Rules 1970 published in G.O.(P)No.7/70/LAD dated 29<sup>th</sup> June 1970 by S.R.O.No.262/70 Gazette dated 1<sup>st</sup> July 1970 have been approved by the Government of India under section 10(1) of the said Act.

As per the circular No.6/4/97/VS (CRS) dated 31/5/1999 of the office of the Registrar General of India, the revamped Civil Registration system was introduced with effect from 01/01/2000. In tune with the newly introduced system, the Registration of Births and Deaths Rules 1970 was replaced

with the new rules, viz Kerala Registration of Births and Deaths Rules 1999 and it was published as per the order G.O.(P)No.8/2000/LSGD dated 06/01/2000.

### 1.2 Organizational Setup in the State

- **Chief Registrar:** The Joint Director of Panchayats, Government of Kerala is the Chief Registrar of Births and Deaths.
- **Additional Chief Registrar:** The Additional Director (General) of Economics and Statistics Department is designated as the Additional Chief Registrar of Births and Deaths.
- **Deputy Chief Registrar:** Deputy Chief Registrar assists the Chief Registrar in the day-to-day affairs relating to the registration of Births and Deaths at the State level. Deputy Director of Economics and Statistics, Vital Statistics division has been designated as Deputy Chief Registrar to assist Additional Chief Registrar to release timely birth & death statistics.
- **District Registrars:** The Deputy Director of Panchayats of the 14 districts in the State are functioning as the District Registrars. The Secretaries of Corporations, Municipalities and the Executive Officer of Kannur Cantonment area are exercising the powers of District Registrars.
- **Additional District Registrars:** The Deputy Directors of the 14 District Statistical Offices are functioning as the Additional District Registrars of Births

and Deaths of respective revenue districts.

- **Registrars:** The Secretaries of Grama Panchayats, Health Officers of Corporations, Health Inspectors of Municipalities and Executive Officer of Kannur Cantonment area are functioning as the Registrars of births and deaths.

### 1.3 The Process

The data reporting forms contain details of birth, death and still birth. Birth Registration form contains information on date of occurrence/registration, usual residence of mother, place of birth, sex and weight of the child, order of birth, type of medical attention at birth, type of delivery and characteristics of the parents including their name, age, religion, educational status, occupation etc. In the case of death, information includes name, sex, age, marital status, religion, occupation, usual residence of the deceased, place of occurrence, date of occurrence/registration, cause of death, whether medically certified or not and kind of medical attention received at the time of death and characteristics of the mother, pregnancy period etc. in the case of still births. These forms have two parts: legal and

statistical. The statistical part of the vital events registered in the registration units are entered in to the Sevana software developed by IKM, Kerala. The Vital Statistics Division of the DES prepares this report as per the methodology and instructions issued by the Registrar General of India (RGI) from time to time. The report contains district-wise statistics of births, deaths, infant deaths, still births and the related vital rates.

### 1.4 Status of Reporting

The local bodies, viz., the Grama Panchayats, Municipalities and Corporations function as the registration units of vital events in the State. Place of Occurrence of events and Year of Registration are the criteria used in the report for compiling vital events. Total Registration units in the State are 1035 units. But the data of Kochi Corporation included in this report is from 07.09.2021 because the details of Birth and Death events in Kochi Corporation is available only from that date in 'Sevana Software'. The details of registration units (Rural & Urban) are given in Table A1. Utmost care has been given for the above process avoiding duplications and omissions, and eventually a cent percent reporting was achieved both in rural as well as urban areas.

## CHAPTER - II

### Analysis of Vital Events – Live Births

#### 2.1 Registered Live Births

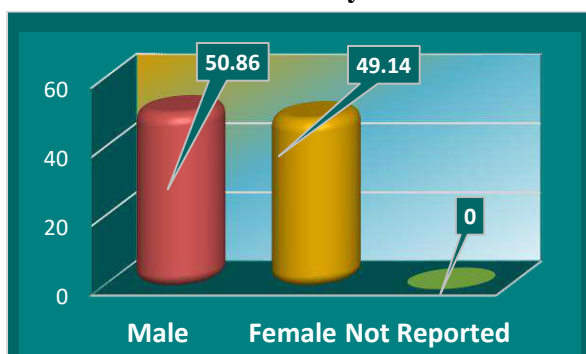

Total number of live births registered during the year 2021 was 419767. Out of the total live births registered, 213500 are male births, 206250 are female births and the remaining 17 cases are not reported its sex. It is seen that more males (50.86%) were born than females (49.14%) which resulted to a sex ratio at birth of 966 females per 1000 males.

The following Table 2.1(i) shows the registered live births by sex. Also the chart 2.1(i) presents the pictorial presentation of percentage of live births registered by sex.

**Table- 2.1(i) Live Births by Sex**

Sex	No. of Births registered	%
Male	213500	50.86
Female	206250	49.14
Not Reported	17	0.00
<b>Total</b>	<b>419767</b>	<b>100.00</b>

**Chart 2.1(i) - Percentage Distribution of Live Births by Sex**

According to the number of live births registered by area, 136759 births (32.58%) were reported from rural areas and 283008 births (67.42%) from urban areas. The following Table 2.1(ii) shows the percentage of area wise registered live births and the chart 2.1(ii) shows the pictorial presentation of percentage of live births registered by area. It is observed that the percentage share of live births registered in rural area is lower than that of urban area.

**Table- 2.1(ii) Live births by Area**

## 2.2 Time Gap in Registration of Birth

The registered births have been classified in four categories depending upon their period of registration. The four time periods considered for the purpose are: i) within prescribed time limit (up to 21 days), ii) After 21 days but within 30 days, iii) After 30 days but within 1 year, iv) More than 1 year. Under the RBD Act 1969, all vital events are to be registered within 21 days from the date of occurrence of the event. Even though there exists a system of birth registration at the place of delivery (hospital) through the institution concerned, there were delayed registrations still prevails. The percentage of registration achieved out of total registration undertaken in the year 2021 within the prescribed time limit (up to 21 days) is 79.88%. As per area wise, it is 72.20% in rural area and 83.59% in urban areas. During the year 2021, 20.12% births registered were reported as delayed registration. In the case of rural area, it is 27.80%, where as in urban area, delayed registration reported is 16.41%. District wise details of time gap in registration of live births are given in Table B3(i), B3(ii) and B3(iii).

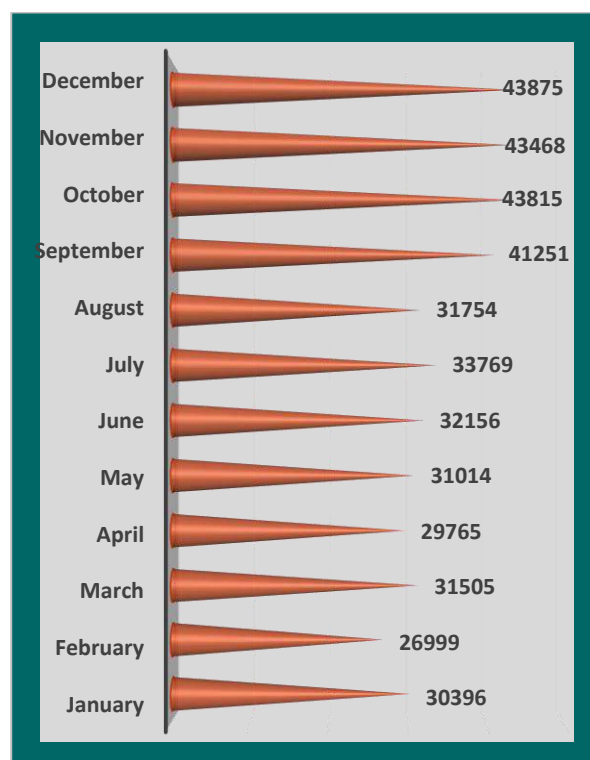

## 2.3 Live births by month wise Registration

In 2021, highest number of births registered in December with 43875 (10.45%) of the total births in the State. It was followed by the months of October (10.44%), November (10.36%) & September (9.83%). The month of February (6.43%) had the least number of births registered in 2021. The month wise live births registered during 2021 are shown in the following table 2.3 and chart 2.3

**Table – 2.3 Month-wise distribution of Live Births**

## 2.4 Sex Ratio at Births by Month and District wise

The Sex Ratio (Number of females per thousand males) at birth is an important indicator to map the sex differential of the population at the beginning of their life. The sex ratio at birth has been calculated by month and district wise for the year 2021 is shown below in the following table 2.4(1) & 2.4(2) while analyzing the month wise Sex Ratio at birth, the highest Sex Ratio at birth reported during the month of December and the lowest during the month of March. In the case of district wise births reported, it is seen that sex ratio at birth is highest in Wayanad and Malappuram followed by Idukki and Ernakulam and the lowest in Pathanamthitta District. Chart 2.4(i) & 2.4(ii) gives the pictorial presentation of sex ratio at birth by month wise & district wise.

**2.5 Medical attention received at the time of delivery**

The percentage distribution of medical attention received at the time of delivery has been given in the following table 2.5(i). The data shows that majority of births have been occurred in an institution, either in Government or private hospitals. Out of total births registered during 2021, Institutional births occurs in 98.81% of cases, 0.48% of the cases were attended by Physicians/Nurse/Midwife. However, about 0.38% of the events were still attended by traditional birth attendant and another 0.31% by Relatives and others.

**Chart 2.5(i)-Percentage distribution of Live Birth by Medical attention at Birth**

The following Table 2.5(ii) represents the percentage distribution of live birth by type of medical attention received at the time of delivery in rural/urban area separately. It is seen that out of 136759 live births in rural area, 96.80 % events are reported as institutional birth and in the case

of urban area, the corresponding rate is 99.78%. In spite of having enough medical facilities across the State, a small percentage of live births (1.05%) is still attended by traditional birth attendant/relatives in rural area and 0.05% in urban area.

## 2.6. Live birth by Type of institution and Method of delivery

Delivery or childbirth can be categorized on the basis of place of delivery, type of delivery (normal/caesarean section) and the personnel conducting delivery. These factors affect the chances of survival and subsequent health of mother and child.

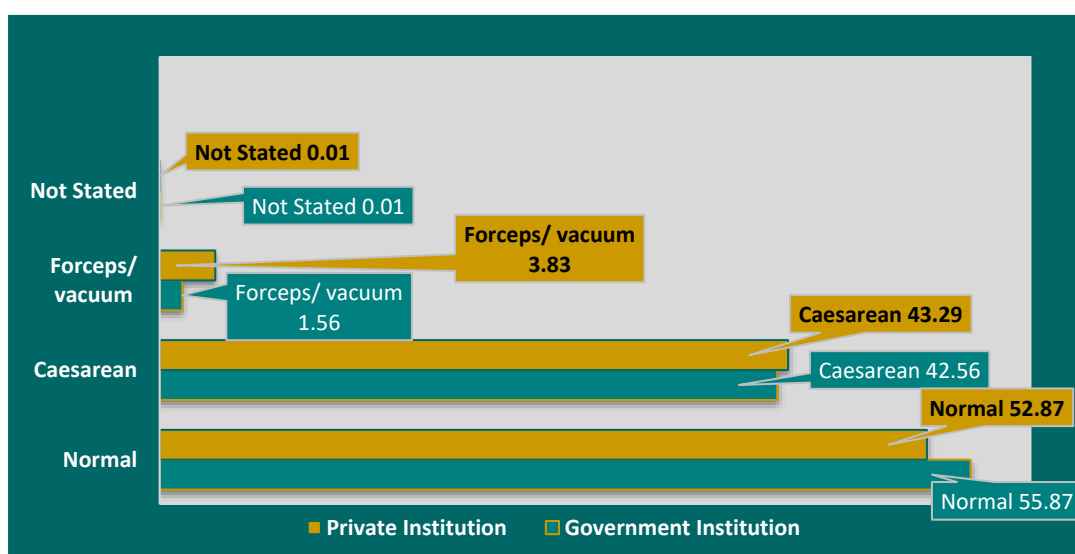

The following Table 2.6 gives the percentage distribution of registered live births occurred in institutions by method of delivery. During 2021, the percentage share of institutional deliveries to total live birth is 98.81%. While considering the

institutional wise, it is seen that out of the 133288 Live births occurred in Govt. Hospitals, 55.87% are normal deliveries and 42.56% are caesarians. But in the case of private hospitals, out of 281475 live births occurred, the percentage of normal deliveries and caesarians are 52.87% and 43.29% respectively. It is also noted that in both the type of institutions, percentage of normal deliveries are more than that of caesarian. The pictorial presentation of percentage distribution of institutional live births by method of delivery is given in the following charts 2.6(i), 2.6(ii) & 2.6(iii).

**Table – 2.6 Percentage distribution of Live Births by Type of institutions and Method of Delivery**

## 2.7. Live Birth by method of Delivery and Age of Mother

The following Table 2.7 presents the Percentage distribution of live birth by method of delivery and age group of mother. As per the percentage of live birth registered by type of attention at delivery, 54.21% are normal deliveries and 42.67% are of Caesarean. The highest percentage

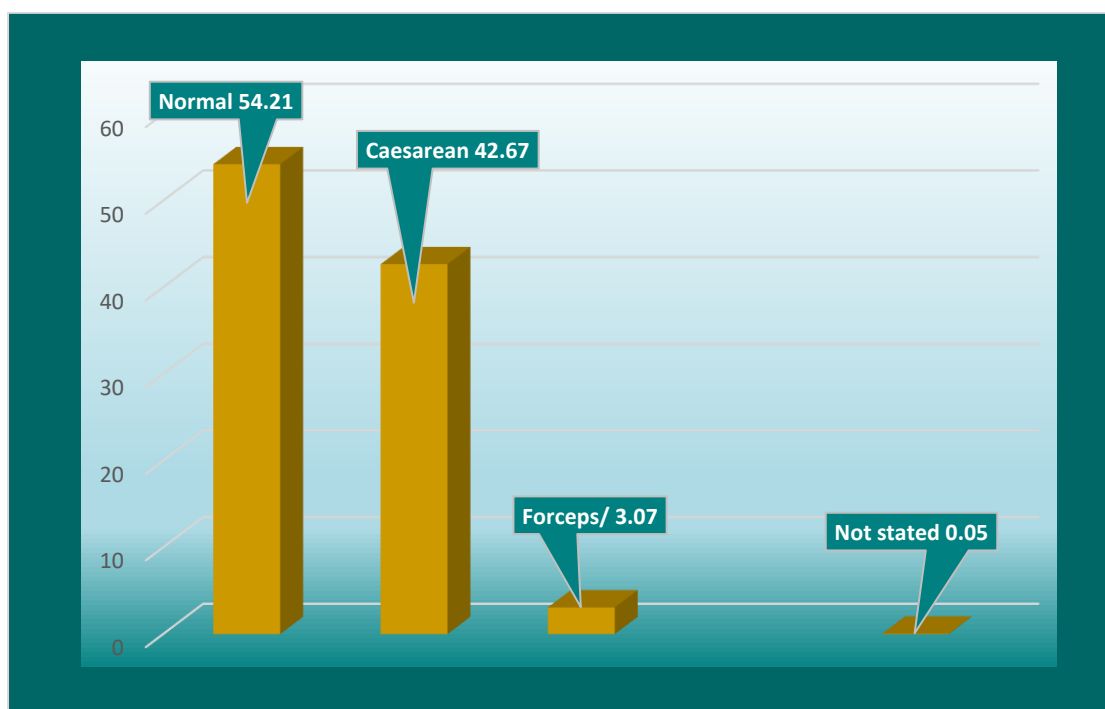

of live births (36.35%) belongs to mothers in the age group 25-29, followed by the age group 20-24. In addition to this, highest percentage of normal (19.36%) as well as caesarean (15.90%) deliveries are also belongs to the 25-29 age group.

## 2.8. Live births by age of mother and birth order

Table 2.8 below presents the distribution of live births by age of mother and birth order. In the reproductive age group of 15-49, highest number of live births were reported for the mothers in the age group of 25-29 (36.35%), followed by the age group 20-24 (31.55%) and there after it declined gradually with increase in age.

### 2.9. Live births by Educational level of mother and father

Table 2.9 shown below the percentage distribution of live births according to the level of education of father and mother. While considering the educational level of mother, highest percentage of birth registered is in the category “Metric but below graduates”, followed by “Graduate and

above” and there after “Primary but below metric”. In the case of educational level of father also, the same pattern is following. In both the case of educational level of mother and father, percentage is very small in all other categories.

### 2.10. Live birth by occupation of Father and Mother

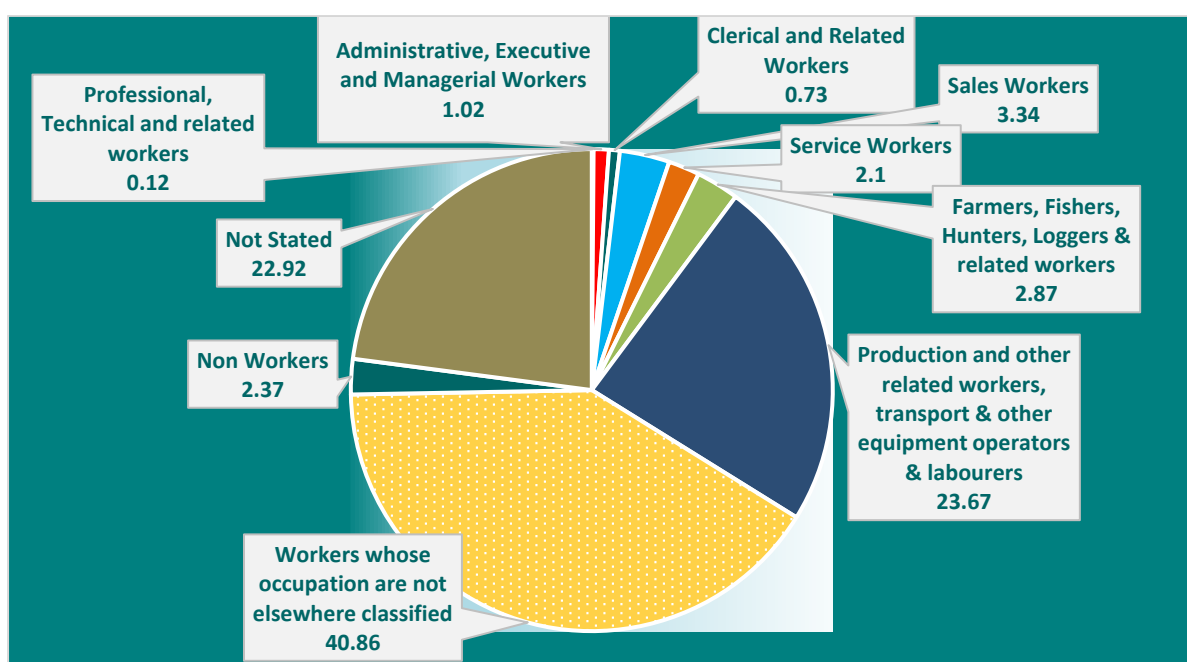

The following table 2.10 shows the Percentage distribution of Live Birth by occupation of Mother & Father. Specific jobs like administrative, executive and managerial jobs require relatively

higher educational qualification, which in turn have impact on family size. Table B16 and B17 gives the details of Live birth by occupation of Mother & Father.

**2.11. Live birth by duration of marriage and birth order**

Following Table 2.11 presents the percentage distribution of live birth by duration of marriage of mother and birth order. It reveals that 53.92% of births were occurred to young couples having duration of marriage 0-4 years and 29.89 % of live births within 5-9 years after marriage. Obviously higher proportion of births (41.53%) was of first order for the young couples having duration of marriage 0-4 years.

**2.12. Live Births by duration of pregnancy and Birth weight**

One of the important causes of still birth and infant death is due to premature delivery. Again premature babies having low birth weight (less than 2.5kg) are susceptible to diseases. Out of the total live birth registered, 14.82% were born with

low birth weight. A clear association between duration of pregnancy and birth weight can be observed in the following Table 2.12. It is seen that 38.36% of babies having birth weight between 2.500-3.000 kg and 45.71% of babies

having weight between 3.000 - 4.000 kg and only 1.05% of babies having birth weight above 4kg. 76.83% deliveries were occurred within the

pregnancy period of 37-39 weeks and 0.76% of deliveries occurred below the pregnancy period of 32 weeks.

### 2.13. Live Births by age of Mother and Birth weight

The following Table 2.13 presents the percentage distribution of live birth by age of mother and birth weight. It is observed that out of total births occurred, 14.82% of infants had a low birth weight of less than 2.5 kg and it is more in the mother's age group 25-29 (5.02%), followed by

the age group 20-24 and 30-34. It is also observed that highest percentage of babies (45.71%) have the weight of 3.000 - 4.000 kg and in this category, it is more in the mothers age group 25-29 (17.19%).

## Analysis of Vital Events

### 3.1 Registered Deaths

In 2021, a total of 339648 deaths were registered in the state. The following Table 3.1(i) provides the percentage distribution of registered deaths in the state by sex. Out of the total registered deaths, males constitute 54.76% (185980) and females constitute 45.24% (153656) which shows that male deaths registered is more than that of female death.

The Rural /Urban classification reveals that out of total deaths registered during the year 2021, rural area represents 62.51% and that of urban area is 37.49%. Table 3.1(ii) shows the percentage distribution of deaths by the area of registration.

**Table - 3. 1(i)**

### 3.2. Time Gap in Registration

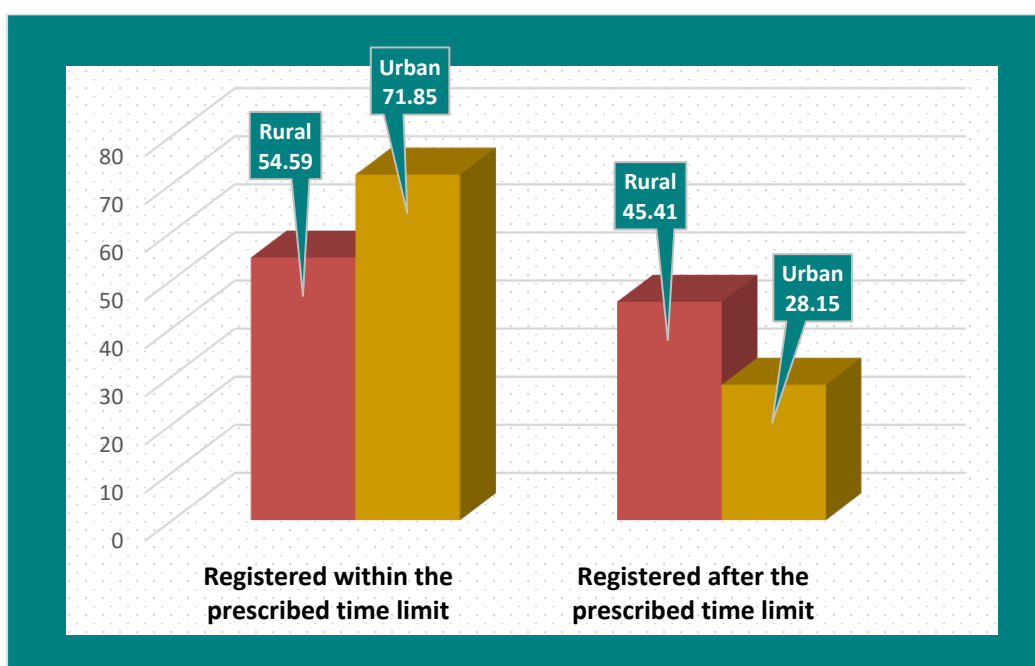

During the year 2021 out of 339648 deaths registered, 207390 deaths (61.06%) were registered within the prescribed time limit (within 21 days of occurrence) and the remaining 132258 deaths (38.94%) registered after the

prescribed time period. Percentage of registration within the prescribed time limits of 21 days in Rural and urban areas are 54.59% and 71.85% respectively. Similarly the percentage of delayed registration in rural and urban areas is 45.41% and 28.15% respectively. Detailed report is presented in Tables D3(i), D3(ii) & D3(iii).

### 3.3. Deaths by month of occurrence

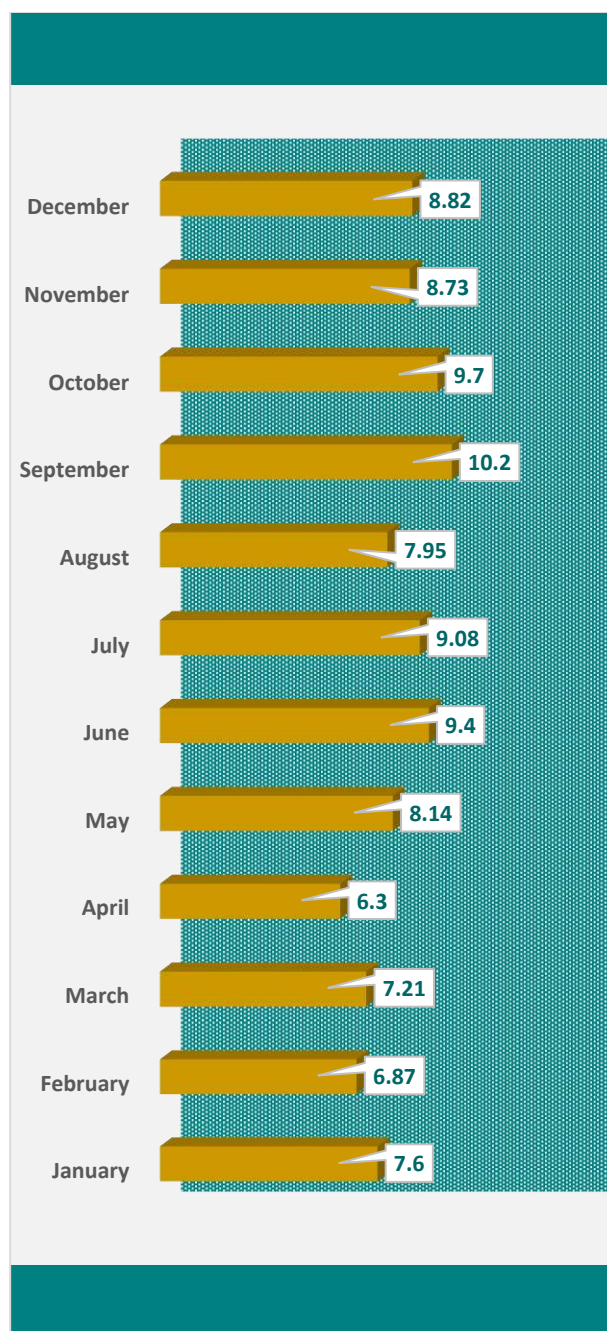

In 2021, highest number of deaths registered in the month of September with 34646 (10.20%) of the total deaths in the State. It was followed by the months of October (9.70%), June (9.40%), and July (9.08%). The month of April had the least number of deaths registered (6.30%).

Following Table 3.3 gives the number and percentage of month wise registered deaths during 2021.

### 3.4. Medical attention received at the time of death

Table 3.4(i) and 3.4(ii) shows the percentage distribution of medical attention, received by the deceased at the time of death. It is evident from the Table 3.4(i) is that 60.41% of total registered deaths have occurred in institutions and 15.62% in Non Institutions. Out of 60.41% of institutional deaths, 31.53% of deaths were reported from rural

areas and 28.88% deaths from urban areas. Similarly in the case of 15.62% of Non-institutional deaths, share of rural and urban sectors are 12.03% and 3.59% respectively. It is also seen that percentage of events in rural area is higher than that of urban area. Another feature observed is that 23.96% of deceased have not received any medical attention at the time of death.

**Table - 3.4(i)**  
**Percentage Distribution of deaths by type of Medical attention received at the time of death**

The following table 3.4(ii) and Chart 3.4.ii(a) and 3.4.ii (b) presents the percentage distribution of deaths by type of medical attention at the time of death for rural and urban sector separately. It is seen that out of 212323 deaths in rural areas, 50.44 per cent of deaths occurred at institutions and 19.24 per cent at non institutions. Similarly out of

127325 deaths in urban areas, share of deaths in institutions and non-institutions are 77.03 % and 9.57% respectively. Also, 30.31 per cent of deaths in rural areas and 13.38% of deaths in urban areas have no medical attention received at the time of death.

### 3.5. Deaths by age and sex

The table -3.5 given below shows the percentage of death in different age group by sex. Among different age groups, highest percentage of death (57.78%) was in the age group 70+ years followed by 15.86% in the age group 55-64 years and

11.61% in the age group 65-69 years. It can be seen that percentage of male deaths is higher than that of females in all the age groups except in 70+ age group where in this category, percentage of female deaths is higher than that of male deaths.

### 3.6. Maternal Deaths by age of Mother

Maternal Death means death of a woman while pregnant or within 42 days of termination of pregnancy, irrespective of the duration and site of the pregnancy, from any cause related to or aggravated by the pregnancy or its management but not from accidental or incidental causes. While considering the maternal death occurred in different age groups, it reveals that out of total maternal deaths registered, highest percentage (31.64%) of maternal deaths have been reported in the age group “45+” during the year 2021.

**3.7. Cause of Deaths by age and sex**

The following table 3.7 presents the details of top 10 leading causes of death in the State during the year 2021. Overall, the leading cause of death is Heart attacks, followed by Asthma and Cancer. Out of 339648 deaths registered, percentage of deaths due to Heart attacks is 21.39%, followed

by Asthma (7.48%), Cancer (6.47%), Paralysis (2.01%), Kidney Trouble (1.92%) & Suicide (1.87%). It can be observed that percentages of suicidal deaths are higher for males than that of females. The Percentage of registered deaths due to accident was 0.70%.

### Analysis of Vital Events – Infant Deaths

#### 4.1. Registered Infant deaths

The infant deaths (death of a child less than one year old) registered by place of occurrence (Rural/Urban) of the event for the year 2021 has been given in Table 4.1(i). It may be observed that the share of rural area is 38.38% while that of urban area is 61.62% in total registered infant deaths during the year. At the state level, the percentage share of infant deaths to total deaths in the year 2021 is 0.62%

Also, the Table 4.1(ii) shows the Percentage distribution of infant deaths by sex. It is seen that out of 2121 infant deaths, male death is 1211 (57.10%), where as that of female death is 904 (42.62%) and the remaining 6 deaths (0.28%), sex is not reported. The share of female infant deaths in total female deaths is 0.59% while the same for male is 0.65%.

#### 4.2. Infant Deaths by age

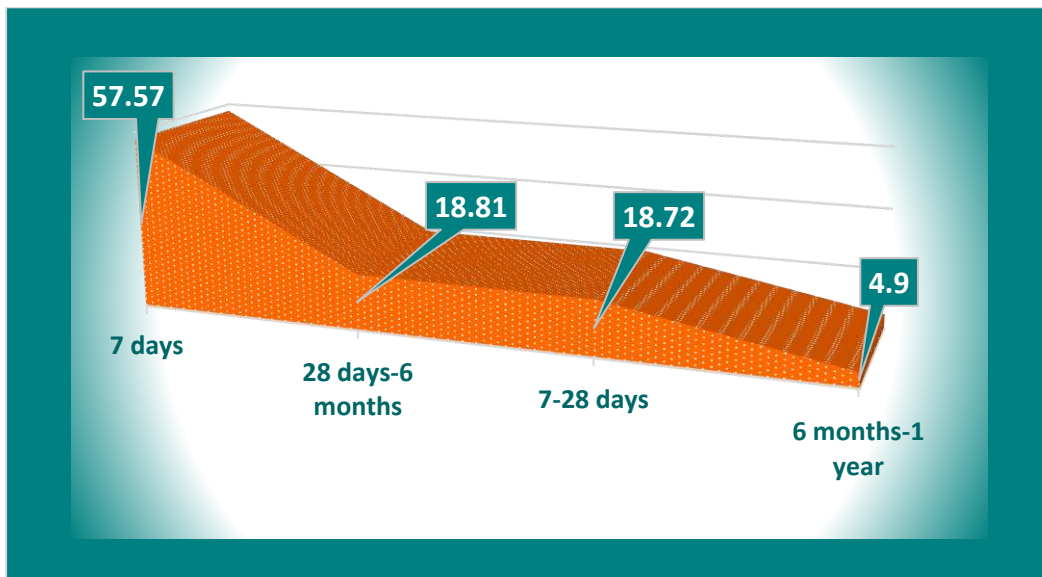

Percentage distribution of infant death by age group is presented below in Table 4.2. The data reveals that 57.57% of infant deaths have been occurred to the infants aged less than seven days.

18.72% of infant death belongs to the age group 7-28 days and 18.81% belongs to the age group 28 days to 6 months. Majority of infant death occurred within 7 days of age. The similar pattern could be observed in rural and urban areas also.

### Analysis of Vital Events – Still Births

#### 5.1. Registered Still births

The World Health Organization (WHO) defines a still birth as a baby born with no signs of life at or after 28 weeks' gestation. During the year 2021, a total of 1991 still births comprising of 1095 males, 877 female and 19 sex not reported were registered. The following table 5.1(i) shows the percentage distribution of registered still births by

**Table - 5.1(i)**

sex and the pictorial presentation is given in chart 5.1(i). Also the Table 5.1(ii) given below presents the still births registered by place of occurrence (Rural / Urban) of the event for the year 2021. It may be observed that out of total registered still births, 30.89% is in rural areas and 69.11% in urban areas.

### 5.2. Still births by age of mother

The following Table 5.2 shows the distribution of still births by age of mother at birth. It is seen that the highest percentage of still birth has been reported in the age group 25-29, followed by the age group 20-24, 30-34, 35-39 and for all other age groups, the number of still births are very low.

**Table - 5.2**

### 5.3 Still births by duration of pregnancy

Percentage distribution of still births by duration of pregnancy is given below in Table 5.3. Highest percentage of still birth is reported under the category of pregnancy duration of less than 32 weeks(40.63%), followed by the period of 32-36 weeks(31.79%) and lowest in the pregnancy period of 40 or more weeks(5.48%). This data

reveals that one of the predominant causes for still birth is due to premature delivery.

## CHAPTER - VI

### Analysis of Vital Rates

#### 6.1 Sex Ratio at Birth (SRB)

The Sex Ratio at Birth is defined as the number of female live births per 1,000 male live births and it is an important indicator to map the sex differential of the population at the beginning of their life. Sex Ratio at birth for the year 2021 is 966 whereas it was 968 for the year 2020. Among the districts, highest SRB has been reported in Wayanad & Malappuram districts (977) and the lowest in Pathanamthitta district (952).

#### 6.2 Crude Birth Rate (CBR)

The Crude Birth Rate is the number of live births occurring among the population of a given geographical area during a given year, per 1,000 population of the given geographical area during the same year. CBR is the number of live births in a year per 1000 population and it shows the growth or decline of population in a region. During the year 2021, the CBR is 11.94, whereas it was 12.77 during 2020 which shows a marginal decrease of 0.83. Generally, Crude Birth Rate in the State shows a decreasing tendency. A declining trend has been observed from the chart given below.

Chart-6.2(i)-Trend in Crude Birth Rate –Kerala (2010-2021)

The graphical representation of birth rate of districts in the State during the year 2021 is depicted in the following chart-6.2(ii). The District wise analysis of the vital events shows that the highest birth rate was recorded in respect

of Malappuram district (18.44), followed by Wayanad (14.43), Kozhikode (13.39), Kannur (13.36) and the lowest in Alappuzha district (8.00).

**Chart 6.2(ii):- District wise Birth Rate**

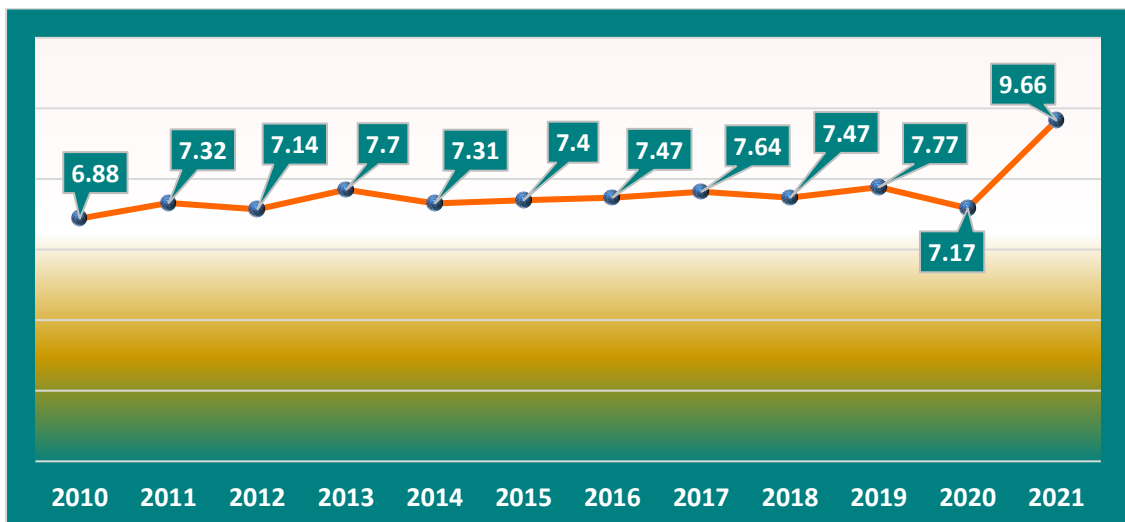

**6.3 Crude Death Rate (CDR)**

Crude Death Rate (CDR) is the total number of deaths per year per 1,000 population. The Crude Death Rate (CDR) of the State during past 12

years is presented in the chart given below. From the below chart, it is observed that the CDR shows an increasing trend when compared with the year 2010.

**Chart-6.3-Crude Death Rate (2010-2021)**

### 6.4 District Wise Death Rate

District wise death rates are shown in the chart below. Among the districts the highest death rate 12.96 was recorded in Pathanamthitta followed by

Kottayam (12.86), Thiruvananthapuram (12.42) and the lowest in Malappuram (6.26).

**Chart-6.4- District Wise Death Rate**

### 6.5 Infant Mortality Rate (IMR)

Infant Mortality Rate is defined as the infant deaths (deaths of a child less than one year old) per thousand live births. Infant mortality rate is a widely used indicator as it provides valuable insights into the health infrastructure and health status of a country. Infant Mortality of the State

during 2021 was 5.05 whereas it is 5.13 during 2020. IMR of the state during the past 12 years is given in the chart. It is evident from the chart that IMR has decreased from 7.42 in 2010 to 5.05 in 2021.

**Chart-6.5-Infant Mortality Rates (2010-2021)**

### 6.5.1 Infant Mortality Rate-District wise

The Table 6.5.1 given below presents the District wise and Sex wise Infant Mortality Rate for the year 2021 .Among the districts, it varies from 1.38 in Kollam to 11.31 in Kozhikode. It is seen that IMR of Male is higher than female in all districts except in Palakkad & Kasaragod.

**Table – 6.5.1 District wise IMR by Sex**

### 6.6. Maternal Mortality Ratio (MMR)

As per World Health Organization, “Maternal death is the death of a woman while pregnant or within 42 days of termination of pregnancy, irrespective of the duration and site of the pregnancy, from any cause related to or aggravated by the pregnancy or its management but not from accidental or incidental causes”. One of the key indicators of maternal mortality is the Maternal Mortality Ratio (MMR) which is defined as the number of maternal deaths during a given time period per 1, 00,000 live births during the same time period. The MMR is used as a measure of the quality of a health care system. Maternal Mortality Ratio at state level for the year 2021 was computed as 19 where as it was 30 during 2010.

**Chart 6.6. Maternal Mortality Ratio (MMR)-(2010-2021)**

### 6.7 Still Birth Rate (SBR)

The World Health Organization (WHO) defines a still birth as a baby born with no signs of life at or after 28 weeks' gestation. Still Birth Rate is estimated as the ratio of number of still births per one thousand live births and still births during the year. The SBR for the year 2021 was computed as 4.72 where as it was 5.30 during 2010.

**Chart 6.7 Still Birth Rate (SBR) - (2010-2021)**

### 6.7. Conclusion

It is worthwhile to mention that CRS is the only source, which can provide vital rates below state level. Even though cent percentage registration has attained in the case of births, under registration of deaths still exist. Level of registration of maternal deaths and infant deaths are comparatively better. There is also need to correctly identify the maternal deaths for estimating the vital indicator MMR. All events of maternal deaths and infant deaths has to be registered to ensure accuracy of rates such as IMR, MMR etc., which are essential for health

planning. Hence more care should be given to the proper implementation and monitoring of Civil Registration System.

## DEFINITIONS USED IN THIS REPORT

1. **Sex ratio** is defined as the number of females per 1000 males in a population

$$\text{Sex Ratio} = \frac{\text{Number of females} \times 1000}{\text{Number of males}}$$

2. **Sex Ratio at birth** =  $\frac{\text{Number of female birth registered during the year} \times 1000}{\text{Number of male birth registered during the year}}$

3. **Masculinity proportion** is the proportion of males in the total population.

$$\text{Masculinity proportion} = \frac{\text{Number of males in the Mid year population}}{\text{Total Mid year population}} \times 1000$$

4. **Aged – Child ratio** indicates whether or not a population is young or ageing

$$\text{Aged child ratio} = \frac{\text{Population of above 60 years}}{\text{Population of below 15 years}} \times 100$$

5. **(Total) Dependency ratio** is an age-population ratio of those typically not in the labour force (the dependent part) and those typically in the labour force (the productive part). It is used to measure the pressure on productive population. The dependent part usually includes those under the age of 15 and over the age of 64. The productive part makes up the population in between, ages 15 – 64. It is normally expressed as a percentage. The **(total) dependency ratio** can be decomposed into the **child dependency ratio** and the **aged dependency ratio**.

$$\text{Total dependency ratio} = \frac{(\text{Population of 0-14 years} + \text{Population of above 65 years})}{\text{Population of 15-64 years}} \times 100$$

$$\text{Young (child) dependency ratio} = \frac{\text{Population of 0-14 years}}{\text{Population of 15-64 years}} \times 100$$

$$\text{Old (aged) dependency ratio} = \frac{\text{Population of above 65 years}}{\text{Population of 15-64 years}} \times 100$$

6. **Crude Birth Rate (CBR)** is the number of live births in a year per thousand of population.

$$\text{Crude Birth Rate} = \frac{\text{Number of Live births during the year}}{\text{Mid-year population}} \times 1000$$

7. **General Fertility Rate (GFR)** is the total number of live births per 1,000 women of childbearing age (ages 15 to 49 years old) in a year.

$$\text{General Fertility Rate} = \frac{\text{Number of live births in a year}}{\text{Mid-year female population in the age group (15-49) years}} \times 1000$$

8. **Age Specific Fertility Rate (ASFR)** is the number of live births per 1,000 women in a particular age groups (usually age 15-19, 20-24 etc.) in a year

$$\text{Age Specific Fertility Rate} = \frac{\text{Number of live birth in a particular age group}}{\text{Mid-year female population of the same age group}} \times 1000$$

9. **Total Fertility Rate (TFR)** may be defined as average number of children that would be born to a woman if she experiences the current fertility pattern throughout her reproductive span (15-49 years).

$$\text{Total fertility rate} = \frac{5 \times \sum_{15-49} \text{ASFR}}{1000}$$

10. **Gross Reproduction Rate (GRR)** is the average number of daughters that would be born to a woman (or a group of women) if she survived at least to the age of 45 and conformed to the age-specific fertility rate of a given year. It is often regarded as the extent to which the generation of daughters replaces the preceding generation of females.

$$\text{Gross reproduction rate} = \frac{5 \times \sum_{15-19}^{45-49} \text{ASFR for female live births}}{1000}$$

**11. Child-woman ratio** is the number of children aged 0 to 4 per 1,000 women of childbearing age. It is used as an index of fertility when reliable birth statistics are not available.

$$\text{Child-women ratio} = \frac{\text{Population of (0-4) age group}}{\text{Female population in the age group of (15-49)}} \times 1000$$

**12. Crude Death Rate (CDR)** is the total number of deaths per year per 1000 people

$$\text{Crude death rate} = \frac{\text{Number of deaths during the year}}{\text{Mid-year population}} \times 1000$$

**13. Infant Mortality Rate (IMR)** is the number of deaths of children less than 1 year old per 1000 live births.

$$\text{Infant mortality rate} = \frac{\text{Number of infant deaths during the year}}{\text{Number of live births during the year}} \times 1000$$

**14. Neo-natal Mortality Rate (NMR)** is the number of deaths during the first 28 completed days of life per 1,000 live births in a given year or period. **Neo-natal deaths** may be subdivided into **early neo-natal deaths**, occurring during the first seven days of life, and **late neo-natal deaths**, occurring after the seventh day but before the 28 completed days of life. **Post neo-natal mortality rate** is the number of deaths after 28 days of life but before one year per 1,000 live births in a given year or period. **Perineo-natal mortality rate** is the number of deaths between the fetal viability (22 weeks gestation) and the end of the 7th day after delivery per 1,000 live births in a given year or period.

$$\text{Neo-natal mortality rate} = \frac{\text{Number of infant deaths} < \text{than 29 days during the year}}{\text{Number of live births during the year}} \times 1000$$

$$\text{Early neo-natal mortality rate} = \frac{\text{Number of infant deaths} < \text{than 7 days during the year}}{\text{Number of live births during the year}} \times 1000$$

$$\text{Late neo-natal mortality rate} = \frac{\text{Number of infant deaths of 7 days to} < \text{than 29 days during the year}}{\text{Number of live births during the year}} \times 1000$$

$$\text{Post neo-natal mortality rate} = \frac{\text{Number of infant deaths of 29 days to} < \text{than one year during the year}}{\text{Number of live births during the year}} \times 1000$$

$$\text{Peri neo-natal mortality rate} = \frac{\text{Number of still births and infant deaths of} < \text{than 7 days during the year}}{\text{Number of live births and still births during the year}} \times 1000$$

**15. Still Birth Rate (SBR)** is the number of fetal deaths (still births) per 1,000 live births plus fetal deaths (still births).

$$\text{Still birth rate} = \frac{\text{Number of still births during the year}}{\text{Number of live births and still births during the year}} \times 1000$$

**16. Maternal Mortality Ratio (MMR)** is the number of maternal deaths per 100000 live births.

$$\text{Maternal Mortality Ratio} = \frac{\text{Number of Maternal Deaths during the year}}{\text{Number of live births during the year}} \times 100000$$
