The 7 Habits of Highly Effective People

Stephen R. Covey

Powerful Lessons in Personal Change
To my colleagues,
Empowered
And Empowering
ACKNOWLEDGMENTS

Interdependence is a higher value than independence.

This work is a synergistic product of many minds. It began in the middle seventies as I was reviewing 200 years of success literature as part of a doctoral program. I am grateful for the inspiration and wisdom of many thinkers and for the trans-generational sources and roots of this wisdom.

I am also grateful for many students, friends, and colleagues at Brigham Young University and the Covey Leadership Center and for thousands of adults, parents, youth, executives, teachers, and other clients who have tested this material and have given feedback and encouragement. The material and arrangement has slowly evolved and has imbued those who have been sincerely and deeply immersed in it with the conviction that the Seven Habits represent a holistic, integrated approach to personal and interpersonal effectiveness, and that, more than in the individual habits themselves, the real key lies in the relationship among them and in how they are sequenced.

For the development and production of the book itself I feel a deep sense of gratitude:

—to Sandra and to each of our children and their spouses for living lives of integrity and service and for supporting my many travels and involvements outside the home. It’s easy to teach principles loved ones live.
—to my brother John for his constant love, interest, insights and purity of soul.

—to the happy memory of my father.

—to my mother for her devotion to her more than 87 living descendants and for her constant demonstrations of love.

—to my dear friends and colleagues in the business, especially:

—to Bill Marre, Ron McMillan, and Lex Watterson for feedback, encouragement, editorial suggestions, and production help.

—to Brad Anderson, who at great personal sacrifice for over a year, developed a Seven Habits video-based development program. Under his leadership this material has been tested and refined and is being implemented by thousands of people across a broad range of organizations. Almost without exception, after initial exposure to this material, our clients desire to make it available to greater numbers of employees, underscoring our confidence that it “works.”

—to Bob Thele for helping to create a system for our firm that gave me the peace of mind to enable me to really focus on the book.

—to David Conley for communicating the value and power of the Seven Habits to hundreds of business organizations so that my colleagues, Blaine Lee, Roice Krueger, Roger Merrill and Al Switzler, and I have the constant opportunity to share ideas in a large variety of settings.

—to my proactive literary agent Jan Miller, and my “can do” associate Greg Link and his assistant Stephanni Smith and Raleen Beckham Wahlin for their creative and courageous marketing leadership.
—to my Simon and Schuster editor Bob Asahina for his professional competence and project leadership, for his many excellent suggestions and for helping me to better understand the difference between writing and speaking.

—to my earlier devoted assistants Shirley and Heather Smith and to my present assistant Marilyn Andrews for a level of loyalty which is truly uncommon.

—to our Executive Excellence magazine editor Ken Shelton for his editing of the first manuscript years ago, for helping refine and test the material in several contexts, and for his integrity and sense of quality.

—to Rebecca Merrill for her invaluable editing and production assistance, for her inner commitment to the material, and for her skill, sensitivity, and carefulness in fulfilling that commitment, and to her husband, Roger, for his wise, synergistic help.

—and to Kay Swim and her son, Gaylord, for their much appreciated vision which contributed to our organization’s rapid growth.
FOREWORD

Twenty years ago when I wrote this book, I had no idea how the world would change and that people would be able to read The 7 Habits of Highly Effective People in this amazing way on this amazing product.

Since then, this book has been called “the most influential business book of the century” (by The Wall Street Journal). It stayed on The New York Times best-seller list for five years. A “must-read” translated into 38 languages, with 20 million copies in print (and is arguably the most pirated business book in the world). Google 7 Habits and you’ll get more than 12 million hits.

I’ve been humbled and gratified by the worldwide audience this book has reached. Presidents, prime ministers, and kings read the book, but so do college students, construction workers, and kitchen help. I’ve heard from literally thousands of people who say things like this:

- “I learned to focus on truly important things, not just urgent things.”
- “I listen-really listen-to other people for the first time.”
- “Since I started thinking win-win in a job that was killing me, I’ve found a new mission and purpose in my professional life.”

How will The 7 Habits impact you? My hope is that you will find new hope, a greater sense of purpose, more peace of mind, and far more rewarding relationships in both your personal and professional life.

PARADIGMS
and PRINCIPLES
INSIDE-OUT

There is no real excellence in all this world
which can be separated from right living.

DAVID STARR JORDAN

In more than 25 years of working with people in business, university,
and marriage and family settings, I have come in contact with many
individuals who have achieved an incredible degree of outward
success, but have found themselves struggling with an inner hunger, a
deep need for personal congruency and effectiveness and for healthy,
growing relationships with other people.

I suspect some of the problems they have shared with me may be familiar to you.

I’ve set and met my career goals and I’m having tremendous professional success. But it’s cost me my personal and family life. I don’t know my wife and children any more. I’m not even sure I know myself and what’s really important to me. I’ve had to ask myself—is it worth it?

I’ve started a new diet—for the fifth time this year. I know I’m overweight, and I really want to change. I read all the new
information, I set goals, I get myself all psyched up with a positive mental attitude and tell myself I can do it. But I don’t. After a few weeks, I fizzle. I just can’t seem to keep a promise I make to myself.

I’ve taken course after course on effective management training. I expect a lot out of my employees and I work hard to be friendly toward them and to treat them right. But I don’t feel any loyalty from them. I think if I were home sick for a day, they’d spend most of their time gabbing at the water fountain. Why can’t I train them to be independent and responsible—or find employees who can be?

My teenage son is rebellious and on drugs. No matter what I try, he won’t listen to me. What can I do?

There’s so much to do. And there’s never enough time. I feel pressured and hassled all day, every day, seven days a week. I’ve attended time management seminars and I’ve tried half a dozen different planning systems. They’ve helped some, but I still don’t feel I’m living the happy, productive, peaceful life I want to live.

I want to teach my children the value of work. But to get them to do anything, I have to supervise every move … and put up with complaining every step of the way. It’s so much easier to do it myself. Why can’t children do their work cheerfully and without being reminded?

I’m busy—really busy. But sometimes I wonder if what I’m doing will make any difference in the long run. I’d really like to think there was meaning in my life, that somehow things were different because I was here.

I see my friends or relatives achieve some degree of success or receive some recognition, and I smile and congratulate them enthusiastically. But inside, I’m eating my heart out. Why do I feel this way?
I have a forceful personality. I know, in almost any interaction, I can control the outcome. Most of the time, I can even do it by influencing others to come up with the solution I want. I think through each situation and I really feel the ideas I come up with are usually the best for everyone. But I feel uneasy. I always wonder what other people really think of me and my ideas.

My marriage has gone flat. We don’t fight or anything; we just don’t love each other anymore. We’ve gone to counseling; we’ve tried a number of things, but we just can’t seem to rekindle the feeling we used to have.

These are deep problems, painful problems—problems that quick fix approaches can’t solve.

A few years ago, my wife Sandra and I were struggling with this kind of concern. One of our sons was having a very difficult time in school. He was doing poorly academically; he didn’t even know how to follow the instructions on the tests, let alone do well on them. Socially he was immature, often embarrassing those closest to him. Athletically, he was small, skinny, and uncoordinated—swinging his baseball bat, for example, almost before the ball was even pitched. Others would laugh at him.

Sandra and I were consumed with a desire to help him. We felt that if “success” were important in any area of life, it was supremely important in our role as parents. So we worked on our attitudes and behavior toward him and we tried to work on his. We attempted to psych him up using positive mental attitude techniques. “Come on, son! You can do it! We know you can. Put your hands a little higher on the bat and keep your eye on the ball. Don’t swing till it gets close to you.” And if he did a little better, we would go to great lengths to reinforce him. “That’s good, son, keep it up.”

When others laughed, we reprimanded them. “Leave him alone. Get off his back. He’s just learning.” And our son would cry and insist that he’d never be any good and that he didn’t like baseball anyway.
Nothing we did seemed to help, and we were really worried. We could see the effect this was having on his self-esteem. We tried to be encouraging and helpful and positive, but after repeated failure, we finally drew back and tried to look at the situation on a different level.

At this time in my professional role I was involved in leadership development work with various clients throughout the country. In that capacity I was preparing bimonthly programs on the subject of communication and perception for IBM’s Executive Development Program participants.

As I researched and prepared these presentations, I became particularly interested in how perceptions are formed, how they govern the way we see, and how the way we see governs how we behave. This led me to a study of expectancy theory and self-fulfilling prophecies or the “Pygmalion effect,” and to a realization of how deeply imbedded our perceptions are. It taught me that we must look at the lens through which we see the world, as well as at the world we see, and that the lens itself shapes how we interpret the world.

As Sandra and I talked about the concepts I was teaching at IBM and about our own situation, we began to realize that what we were doing to help our son was not in harmony with the way we really saw him. When we honestly examined our deepest feelings, we realized that our perception was that he was basically inadequate, somehow “behind.” No matter how much we worked on our attitude and behavior, our efforts were ineffective because, despite our actions and our words, what we really communicated to him was, “You aren’t capable. You have to be protected.”

We began to realize that if we wanted to change the situation, we first had to change ourselves. And to change ourselves effectively, we first had to change our perceptions.
THE PERSONALITY AND CHARACTER ETHICS

At the same time, in addition to my research on perception, I was also deeply immersed in an in-depth study of the success literature published in the United States since 1776. I was reading or scanning literally hundreds of books, articles, and essays in fields such as self-improvement, popular psychology, and self-help. At my fingertips was the sum and substance of what a free and democratic people considered to be the keys to successful living.

As my study took me back through 200 years of writing about success, I noticed a startling pattern emerging in the content of the literature. Because of our own pain, and because of similar pain I had seen in the lives and relationships of many people I had worked with through the years, I began to feel more and more that much of the success literature of the past 50 years was superficial. It was filled with social image consciousness, techniques and quick fixes—with social band-aids and aspirin that addressed acute problems and sometimes even appeared to solve them temporarily, but left the underlying chronic problems untouched to fester and resurface time and again.

In stark contrast, almost all the literature in the first 150 years or so focused on what could be called the Character Ethic as the foundation of success—things like integrity, humility, fidelity, temperance, courage, justice, patience, industry, simplicity, modesty, and the Golden Rule. Benjamin Franklin’s autobiography is representative of that literature. It is, basically, the story of one man’s effort to integrate certain principles and habits deep within his nature.

The Character Ethic taught that there are basic principles of effective living, and that people can only experience true success and enduring happiness as they learn and integrate these principles into their basic character.

But shortly after World War I the basic view of success shifted from the Character Ethic to what we might call the Personality Ethic. Success became more a function of personality, of public image, of attitudes and behaviors, skills and techniques, that lubricate the processes of human interaction. This Personality Ethic essentially took two paths: one was human and public relations techniques, and the other was positive mental attitude (PMA). Some of this philosophy was expressed in inspiring and sometimes valid maxims such as “Your attitude determines your altitude,” “Smiling wins more friends than frowning,” and “Whatever the mind of man can conceive and believe it can
achieve.”

Other parts of the personality approach were clearly manipulative, even deceptive, encouraging people to use techniques to get other people to like them, or to fake interest in the hobbies of others to get out of them what they wanted, or to use the “power look,” or to intimidate their way through life.

Some of this literature acknowledged character as an ingredient of success, but tended to compartmentalize it rather than recognize it as foundational and catalytic. Reference to the Character Ethic became mostly lip service; the basic thrust was quick-fix influence techniques, power strategies, communication skills, and positive attitudes.

This Personality Ethic, I began to realize, was the subconscious source of the solutions Sandra and I were attempting to use with our son. As I thought more deeply about the difference between the Personality and Character Ethics, I realized that Sandra and I had been getting social mileage out of our children’s good behavior, and, in our eyes, this son simply didn’t measure up. Our image of ourselves, and our role as good, caring parents was even deeper than our image of our son and perhaps influenced it. There was a lot more wrapped up in the way we were seeing and handling the problem than our concern for our son’s welfare.

As Sandra and I talked, we became painfully aware of the powerful influence of our own character and motives and of our perception of him. We knew that social comparison motives were out of harmony with our deeper values and could lead to conditional love and eventually to our son’s lessened sense of self-worth. So we determined to focus our efforts on us—not on our techniques, but on our deepest motives and our perception of him. Instead of trying to change him, we tried to stand apart—to separate us from him—and to sense his identity, individuality, separateness, and worth.

Through deep thought and the exercise of faith and prayer, we began to see our son in terms of his own uniqueness. We saw within him layers and layers of potential that would be realized at his own pace and speed. We decided to relax and get out of his way and let his own personality emerge. We saw our natural role as being to affirm, enjoy, and value him. We also conscientiously worked on our motives and cultivated internal sources of security so that our own feelings of worth were not dependent on our children’s “acceptable” behavior.

As we loosened up our old perception of our son and developed value-based motives, new feelings began to emerge. We found ourselves enjoying him instead of comparing or judging him. We stopped trying to clone him in our own image or measure him against social expectations. We stopped trying to kindly, positively manipulate him into an acceptable social mold. Because we saw him
as fundamentally adequate and able to cope with life, we stopped protecting him against the ridicule of others.

He had been nurtured on this protection, so he went through some withdrawal pains, which he expressed and which we accepted, but did not necessarily respond to. “We don’t need to protect you,” was the unspoken message. “You’re fundamentally okay.”

As the weeks and months passed, he began to feel a quiet confidence and affirmed himself. He began to blossom, at his own pace and speed. He became outstanding as measured by standard social criteria—academically, socially and athletically—at a rapid clip, far beyond the so-called natural developmental process. As the years passed, he was elected to several student body leadership positions, developed into an all-state athlete and started bringing home straight A report cards. He developed an engaging and guileless personality that has enabled him to relate in nonthreatening ways to all kinds of people.

Sandra and I believe that our son’s “socially impressive” accomplishments were more a serendipitous expression of the feelings he had about himself than merely a response to social reward. This was an amazing experience for Sandra and me, and a very instructional one in dealing with our other children and in other roles as well. It brought to our awareness on a very personal level the vital difference between the Personality Ethic and the Character Ethic of success. The Psalmist expressed our conviction well: “Search your own heart with all diligence for out of it flow the issues of life.”
My experience with my son, my study of perception and my reading of the success literature coalesced to create one of those “Aha!” experiences in life when suddenly things click into place. I was suddenly able to see the powerful impact of the Personality Ethic and to clearly understand those subtle, often consciously unidentified discrepancies between what I knew to be true—some things I had been taught many years ago as a child and things that were deep in my own inner sense of value—and the quick fix philosophies that surrounded me every day. I understood at a deeper level why, as I had worked through the years with people from all walks of life, I had found that the things I was teaching and knew to be effective were often at variance with these popular voices.

I am not suggesting that elements of the Personality Ethic—personality growth, communication skill training, and education in the field of influence strategies and positive thinking—are not beneficial, in fact sometimes essential for success. I believe they are. But these are secondary, not primary traits. Perhaps, in utilizing our human capacity to build on the foundation of generations before us, we have inadvertently become so focused on our own building that we have forgotten the foundation that holds it up; or in reaping for so long where we have not sown, perhaps we have forgotten the need to sow.

If I try to use human influence strategies and tactics of how to get other people to do what I want, to work better, to be more motivated, to like me and each other—while my character is fundamentally flawed, marked by duplicity and insincerity—then, in the long run, I cannot be successful. My duplicity will breed distrust, and everything I do—even using so-called good human relations techniques—will be perceived as manipulative. It simply makes no difference how good the rhetoric is or even how good the intentions are; if there is little or no trust, there is no foundation for permanent success. Only basic goodness gives life to technique.

To focus on technique is like cramming your way through school. You sometimes get by, perhaps even get good grades, but if you don’t pay the price day in and day out, you never achieve true mastery of the subjects you study or develop an educated mind.

Did you ever consider how ridiculous it would be to try to cram on a farm—to forget to plant in the spring, play all summer and then cram in the fall to bring in
the harvest? The farm is a natural system. The price must be paid and the process followed. You always reap what you sow; there is no shortcut.

This principle is also true, ultimately, in human behavior, in human relationships. They, too, are natural systems based on the law of the harvest. In the short run, in an artificial social system such as school, you may be able to get by if you learn how to manipulate the man-made rules, to “play the game.” In most one-shot or short-lived human interactions, you can use the Personality Ethic to get by and to make favorable impressions through charm and skill and pretending to be interested in other people’s hobbies. You can pick up quick, easy techniques that may work in short-term situations. But secondary traits alone have no permanent worth in long-term relationships. Eventually, if there isn’t deep integrity and fundamental character strength, the challenges of life will cause true motives to surface and human relationship failure will replace short-term success.

Many people with secondary greatness—that is, social recognition for their talents—lack primary greatness or goodness in their character. Sooner or later, you’ll see this in every long-term relationship they have, whether it is with a business associate, a spouse, a friend, or a teenage child going through an identity crisis. It is character that communicates most eloquently. As Emerson once put it, “What you are shouts so loudly in my ears I cannot hear what you say.”

There are, of course, situations where people have character strength but they lack communication skills, and that undoubtedly affects the quality of relationships as well. But the effects are still secondary.

In the last analysis, what we are communicates far more eloquently than anything we say or do. We all know it. There are people we trust absolutely because we know their character. Whether they’re eloquent or not, whether they have the human relations techniques or not, we trust them, and we work successfully with them.

In the words of William George Jordan, “Into the hands of every individual is given a marvelous power for good or evil—the silent, unconscious, unseen influence of his life. This is simply the constant radiation of what man really is, not what he pretends to be.”
The Power of a Paradigm

The Seven Habits of Highly Effective People embody many of the fundamental principles of human effectiveness. These habits are basic; they are primary. They represent the internalization of correct principles upon which enduring happiness and success are based.

But before we can really understand these Seven Habits, we need to understand our own “paradigms” and how to make a “paradigm shift.”

Both the Character Ethic and the Personality Ethic are examples of social paradigms. The word paradigm comes from the Greek. It was originally a scientific term, and is more commonly used today to mean a model, theory, perception, assumption, or frame of reference. In the more general sense, it’s the way we “see” the world—not in terms of our visual sense of sight, but in terms of perceiving, understanding, interpreting.

For our purposes, a simple way to understand paradigms is to see them as maps. We all know that “the map is not the territory.” A map is simply an explanation of certain aspects of the territory. That’s exactly what a paradigm is. It is a theory, an explanation, or model of something else.

Suppose you wanted to arrive at a specific location in central Chicago. A street map of the city would be a great help to you in reaching your destination. But suppose you were given the wrong map. Through a printing error, the map labeled “Chicago” was actually a map of Detroit. Can you imagine the frustration, the ineffectiveness of trying to reach your destination?

You might work on your behavior—you could try harder, be more diligent, double your speed. But your efforts would only succeed in getting you to the wrong place faster.

You might work on your attitude—you could think more positively. You still wouldn’t get to the right place, but perhaps you wouldn’t care. Your attitude would be so positive, you’d be happy wherever you were.

The point is, you’d still be lost. The fundamental problem has nothing to do with your behavior or your attitude. It has everything to do with having a wrong map.

If you have the right map of Chicago, then diligence becomes important, and when you encounter frustrating obstacles along the way, then attitude can make a real difference. But the first and most important requirement is the accuracy of
the map.

Each of us has many, many maps in our head, which can be divided into two main categories: maps of the way things are, or realities, and maps of the way things should be, or values. We interpret everything we experience through these mental maps. We seldom question their accuracy; we’re usually even unaware that we have them. We simply assume that the way we see things is the way they really are or the way they should be.

And our attitudes and behaviors grow out of those assumptions. The way we see things is the source of the way we think and the way we act.

Before going any further, I invite you to have an intellectual and emotional experience. Take a few seconds and just look at the picture on the following page.

Now look at the picture and carefully describe what you see.

Do you see a woman? How old would you say she is? What does she look like? What is she wearing? In what kind of roles do you see her?

You probably would describe the woman in the second picture to be about 25 years old—very lovely, rather fashionable with a petite nose and a demure presence. If you were a single man you might like to take her out. If you were in retailing, you might hire her as a fashion model.

But what if I were to tell you that you’re wrong? What if I said this picture is of a woman in her 60’s or 70’s who looks sad, has a huge nose, and is certainly no model. She’s someone you probably would help across the street.

Who’s right? Look at the picture again. Can you see the old woman? If you can’t, keep trying. Can you see her big hook nose? Her shawl?

If you and I were talking face to face, we could discuss the picture. You could describe what you see to me, and I could talk to you about what I see. We could continue to communicate until you clearly showed me what you see in the picture and I clearly showed you what I see.

Because we can’t do that, and study the picture there and then look at this picture again. Can you see the old woman now? It’s important that you see her before you continue reading.
I first encountered this exercise many years ago at the Harvard Business School. The instructor was using it to demonstrate clearly and eloquently that two people can see the same thing, disagree, and yet both be right. It’s not logical; its psychological.

He brought into the room a stack of large cards, half of which had the image of the young woman you saw and the other half of which had the image of the old woman.

He passed them out to the class, the picture of the young woman to one side of the room and the picture of the old woman to the other. He asked us to look at the cards, concentrate on them for about ten seconds and then pass them back in.
He then projected upon the screen the picture you saw combining both images and asked the class to describe what they saw. Almost every person in that class who had first seen the young woman’s image on a card saw the young woman in the picture. And almost every person who had first seen the old woman’s image on a card saw an old woman in the picture.

The professor then asked one student to explain what he saw to a student on the opposite side of the room. As they talked back and forth, communication problems flared up.

“What do you mean, ‘old lady’? She couldn’t be more than 20 or 22 years old!”

“Oh, come on. You have to be joking. She’s 70—could be pushing 80!”

“What’s the matter with you? Are you blind? This lady is young, good looking. I’d like to take her out. She’s lovely.”

“Lovely? She’s an old hag.”

The arguments went back and forth, each person sure of, and adamant in, his or her position. All of this occurred in spite of one exceedingly important advantage the students had—most of them knew early in the demonstration that another point of view did, in fact, exist—something many of us would never admit. Nevertheless, at first, only a few students really tried to see this picture from another frame of reference.

After a period of futile communication, one student went up to the screen and pointed to a line on the drawing. “There is the young woman’s necklace.” The other one said, “No, that is the old woman’s mouth.” Gradually, they began to calmly discuss specific points of difference, and finally one student, and then another, experienced sudden recognition when the images of both came into focus. Through continued calm, respectful, and specific communication, each of us in the room was finally able to see the other point of view. But when we looked away and then back, most of us would immediately see the image we had been conditioned to see in the ten-second period of time.

I frequently use this perception demonstration in working with people and organizations because it yields so many deep insights into both personal and interpersonal effectiveness. It shows, first of all, how powerfully conditioning affects our perceptions, our paradigms. If ten seconds can have that kind of impact on the way we see things, what about the conditioning of a lifetime? The influences in our lives—family, school, church, work environment, friends, associates, and current social paradigms such as the Personality Ethic—all have made their silent unconscious impact on us and help shape our frame of reference, our paradigms, our maps.

It also shows that these paradigms are the source of our attitudes and
behaviors. We cannot act with integrity outside of them. We simply cannot maintain wholeness if we talk and walk differently than we see. If you were among the 90 percent who typically see the young woman in the composite picture when conditioned to do so, you undoubtedly found it difficult to think in terms of having to help her cross the street. Both your attitude about her and your behavior toward her had to be congruent with the way you saw her.

This brings into focus one of the basic flaws of the Personality Ethic. To try to change outward attitudes and behaviors does very little good in the long run if we fail to examine the basic paradigms from which those attitudes and behaviors flow.

This perception demonstration also shows how powerfully our paradigms affect the way we interact with other people. As clearly and objectively as we think we see things, we begin to realize that others see them differently from their own apparently equally clear and objective point of view. “Where we stand depends on where we sit.”

Each of us tends to think we see things as they are, that we are objective. But this is not the case. We see the world, not as it is, but as we are—or, as we are conditioned to see it. When we open our mouths to describe what we see, we in effect describe ourselves, our perceptions, our paradigms. When other people disagree with us, we immediately think something is wrong with them. But, as the demonstration shows, sincere, clearheaded people see things differently, each looking through the unique lens of experience.

This does not mean that there are no facts. In the demonstration, two individuals who initially have been influenced by different conditioning pictures look at the third picture together. They are now both looking at the same identical facts—black lines and white spaces—and they would both acknowledge these as facts. But each person’s interpretation of these facts represents prior experiences, and the facts have no meaning whatsoever apart from the interpretation.

The more aware we are of our basic paradigms, maps, or assumptions, and the extent to which we have been influenced by our experience, the more we can take responsibility for those paradigms, examine them, test them against reality, listen to others and be open to their perceptions, thereby getting a larger picture and a far more objective view.
The Power of a Paradigm Shift

Perhaps the most important insight to be gained from the perception demonstration is in the area of paradigm shifting, what we might call the “Aha!” experience when someone finally “sees” the composite picture in another way. The more bound a person is by the initial perception, the more powerful the “Aha!” experience is. It’s as though a light were suddenly turned on inside.

The term paradigm shift was introduced by Thomas Kuhn in his highly influential landmark book, The Structure of Scientific Revolutions. Kuhn shows how almost every significant breakthrough in the field of scientific endeavor is first a break with tradition, with old ways of thinking, with old paradigms.

For Ptolemy, the great Egyptian astronomer, the earth was the center of the universe. But Copernicus created a paradigm shift, and a great deal of resistance and persecution as well, by placing the sun at the center. Suddenly, everything took on a different interpretation.

The Newtonian model of physics was a clockwork paradigm and is still the basis of modern engineering. But it was partial, incomplete. The scientific world was revolutionized by the Einsteinian paradigm, the relativity paradigm, which had much higher predictive and explanatory value.

Until the germ theory was developed, a high percentage of women and children died during childbirth, and no one could understand why. In military skirmishes, more men were dying from small wounds and diseases than from the major traumas on the front lines. But as soon as the germ theory was developed, a whole new paradigm, a better, improved way of understanding what was happening made dramatic, significant medical improvement possible.

The United States today is the fruit of a paradigm shift. The traditional concept of government for centuries had been a monarchy, the divine right of kings. Then a different paradigm was developed—government of the people, by the people, and for the people. And a constitutional democracy was born, unleashing tremendous human energy and ingenuity, and creating a standard of living, of freedom and liberty, of influence and hope unequaled in the history of the world.

Not all paradigm shifts are in positive directions. As we have observed, the shift from the Character Ethic to the Personality Ethic has drawn us away from the very roots that nourish true success and happiness.
But whether they shift us in positive or negative directions, whether they are instantaneous or developmental, paradigm shifts move us from one way of seeing the world to another. And those shifts create powerful change. Our paradigms, correct or incorrect, are the sources of our attitudes and behaviors, and ultimately our relationships with others.

I remember a mini-paradigm shift I experienced one Sunday morning on a subway in New York. People were sitting quietly—some reading newspapers, some lost in thought, some resting with their eyes closed. It was a calm, peaceful scene.

Then suddenly, a man and his children entered the subway car. The children were so loud and rambunctious that instantly the whole climate changed.

The man sat down next to me and closed his eyes, apparently oblivious to the situation. The children were yelling back and forth, throwing things, even grabbing people’s papers. It was very disturbing. And yet, the man sitting next to me did nothing.

It was difficult not to feel irritated. I could not believe that he could be so insensitive as to let his children run wild like that and do nothing about it, taking no responsibility at all. It was easy to see that everyone else on the subway felt irritated, too. So finally, with what I felt was unusual patience and restraint, I turned to him and said, “Sir, your children are really disturbing a lot of people. I wonder if you couldn’t control them a little more?”

The man lifted his gaze as if to come to a consciousness of the situation for the first time and said softly, “Oh, you’re right. I guess I should do something about it. We just came from the hospital where their mother died about an hour ago. I don’t know what to think, and I guess they don’t know how to handle it either.”

Can you imagine what I felt at that moment? My paradigm shifted. Suddenly I saw things differently, and because I saw differently, I thought differently, I felt differently, I behaved differently. My irritation vanished. I didn’t have to worry about controlling my attitude or my behavior; my heart was filled with the man’s pain. Feelings of sympathy and compassion flowed freely. “Your wife just died? Oh, I’m so sorry! Can you tell me about it? What can I do to help?” Everything changed in an instant.

Many people experience a similar fundamental shift in thinking when they face a life-threatening crisis and suddenly see their priorities in a different light,
or when they suddenly step into a new role, such as that of husband or wife, parent or grandparent, manager or leader.

We could spend weeks, months, even years laboring with the Personality Ethic trying to change our attitudes and behaviors and not even begin to approach the phenomenon of change that occurs spontaneously when we see things differently.

It becomes obvious that if we want to make relatively minor changes in our lives, we can perhaps appropriately focus on our attitudes and behaviors. But if we want to make significant, quantum change, we need to work on our basic paradigms.

In the words of Thoreau, “For every thousand hacking at the leaves of evil, there is one striking at the root.” We can only achieve quantum improvements in our lives as we quit hacking at the leaves of attitude and behavior and get to work on the root, the paradigms from which our attitudes and behaviors flow.
SEEING AND BEING

Of course, not all paradigm shifts are instantaneous. Unlike my instant insight on the subway, the paradigm-shifting experience Sandra and I had with our son was a slow, difficult, and deliberate process. The approach we had first taken with him was the outgrowth of years of conditioning and experience in the Personality Ethic. It was the result of deeper paradigms we held about our own success as parents as well as the measure of success of our children. And it was not until we changed those basic paradigms, until we saw things differently, that we were able to create quantum change in ourselves and in the situation.

In order to see our son differently, Sandra and I had to be differently. Our new paradigm was created as we invested in the growth and development of our own character.

Paradigms are inseparable from character. Being is seeing in the human dimension. And what we see is highly interrelated to what we are. We can’t go very far to change our seeing without simultaneously changing our being, and vice versa.

Even in my apparently instantaneous paradigm-shifting experience that morning on the subway, my change of vision was a result of—and limited by—my basic character.

I’m sure there are people who, even suddenly understanding the true situation, would have felt no more than a twinge of regret or vague guilt as they continued to sit in embarrassed silence beside the grieving, confused man. On the other hand, I am equally certain there are people who would have been far more sensitive in the first place, who may have recognized that a deeper problem existed and reached out to understand and help before I did.

Paradigms are powerful because they create the lens through which we see the world. The power of a paradigm shift is the essential power of quantum change, whether that shift is an instantaneous or a slow and deliberate process.
The Principle-Centered Paradigm

The Character Ethic is based on the fundamental idea that there are principles that govern human effectiveness—natural laws in the human dimension that are just as real, just as unchanging and unarguably “there” as laws such as gravity are in the physical dimension.

An idea of the reality—and the impact—of these principles can be captured in another paradigm-shifting experience as told by Frank Koch in Proceedings, the magazine of the Naval Institute.

Two battleships assigned to the training squadron had been at sea on maneuvers in heavy weather for several days. I was serving on the lead battleship and was on watch on the bridge as night fell. The visibility was poor with patchy fog, so the captain remained on the bridge keeping an eye on all activities.

Shortly after dark, the lookout on the wing of the bridge reported, “Light, bearing on the starboard bow.”

“Is it steady or moving astern?” the captain called out.

Lookout replied, “Steady, captain,” which meant we were on a dangerous collision course with that ship.

The captain then called to the signalman, “Signal that ship: We are on a collision course, advise you change course 20 degrees.”

Back came a signal, “Advisable for you to change course 20 degrees.”

The captain said, “Send, I’m a captain, change course 20 degrees.”

“I’m a seaman second class,” came the reply. “You had better change course 20 degrees.”

By that time, the captain was furious. He spat out, “Send, I’m a battleship. Change course 20 degrees.”

Back came the flashing light, “I’m a lighthouse.”

We changed course.

The paradigm shift experienced by the captain—and by us as we read this account—puts the situation in a totally different light. We can see a reality that is superceded by his limited perception—a reality that is as critical for us to
understand in our daily lives as it was for the captain in the fog.

Principles are like lighthouses. They are natural laws that cannot be broken. As Cecil B. deMille observed of the principles contained in his monumental movie, *The Ten Commandments*, “It is impossible for us to break the law. We can only break ourselves against the law.”

While individuals may look at their own lives and interactions in terms of paradigms or maps emerging out of their experience and conditioning, these maps are not the territory. They are a “subjective reality,” only an attempt to describe the territory.

The “objective reality,” or the territory itself, is composed of “lighthouse” principles that govern human growth and happiness—natural laws that are woven into the fabric of every civilized society throughout history and comprise the roots of every family and institution that has endured and prospered. The degree to which our mental maps accurately describe the territory does not alter its existence.

The reality of such principles or natural laws becomes obvious to anyone who thinks deeply and examines the cycles of social history. These principles surface time and time again, and the degree to which people in a society recognize and live in harmony with them moves them toward either survival and stability or disintegration and destruction.

The principles I am referring to are not esoteric, mysterious, or “religious” ideas. There is not one principle taught in this book that is unique to any specific faith or religion, including my own. These principles are a part of most every major enduring religion, as well as enduring social philosophies and ethical systems. They are self-evident and can easily be validated by any individual. It’s almost as if these principles or natural laws are part of the human condition, part of the human consciousness, part of the human conscience. They seem to exist in all human beings, regardless of social conditioning and loyalty to them, even though they might be submerged or numbed by such conditions or disloyalty.

I am referring, for example, to the principle of *fairness*, out of which our whole concept of equity and justice is developed. Little children seem to have an innate sense of the idea of fairness even apart from opposite conditioning experiences. There are vast differences in how fairness is defined and achieved, but there is almost universal awareness of the idea.

Other examples would include *integrity* and *honesty*. They create the foundation of trust which is essential to cooperation and long-term personal and interpersonal growth.

Another principle is *human dignity*. The basic concept in the United States Declaration of Independence bespeaks this value or principle. “We hold these
truths to be self-evident: that all men are created equal and endowed by their Creator with certain inalienable rights, that among these are life, liberty and the pursuit of happiness.”

Another principle is service, or the idea of making a contribution. Another is quality or excellence.

There is the principle of potential, the idea that we are embryonic and can grow and develop and release more and more potential, develop more and more talents. Highly related to potential is the principle of growth—the process of releasing potential and developing talents, with the accompanying need for principles such as patience, nurturance, and encouragement.

Principles are not practices. A practice is a specific activity or action. A practice that works in one circumstance will not necessarily work in another, as parents who have tried to raise a second child exactly like they did the first can readily attest.

While practices are situationally specific, principles are deep, fundamental truths that have universal application. They apply to individuals, to marriages, to families, to private and public organizations of every kind. When these truths are internalized into habits, they empower people to create a wide variety of practices to deal with different situations.

Principles are not values. A gang of thieves can share values, but they are in violation of the fundamental principles we’re talking about. Principles are the territory. Values are maps. When we value correct principles, we have truth—a knowledge of things as they are.

Principles are guidelines for human conduct that are proven to have enduring, permanent value. They’re fundamental. They’re essentially unarguable because they are self-evident. One way to quickly grasp the self-evident nature of principles is to simply consider the absurdity of attempting to live an effective life based on their opposites. I doubt that anyone would seriously consider unfairness, deceit, baseness, uselessness, mediocrity, or degeneration to be a solid foundation for lasting happiness and success. Although people may argue about how these principles are defined or manifested or achieved, there seems to be an innate consciousness and awareness that they exist.

The more closely our maps or paradigms are aligned with these principles or natural laws, the more accurate and functional they will be. Correct maps will infinitely impact our personal and interpersonal effectiveness far more than any amount of effort expended on changing our attitudes and behaviors.
PRINCIPLES OF GROWTH AND CHANGE

The glitter of the Personality Ethic, the massive appeal, is that there is some quick and easy way to achieve quality of life—personal effectiveness and rich, deep relationships with other people—without going through the natural process of work and growth that makes it possible.

It’s symbol without substance. It’s the “get rich quick” scheme promising “wealth without work.” And it might even appear to succeed—but the schemer remains.

The Personality Ethic is illusory and deceptive. And trying to get high quality results with its techniques and quick fixes is just about as effective as trying to get to some place in Chicago using a map of Detroit.

In the words of Erich Fromm, an astute observer of the roots and fruits of the Personality Ethic:

Today we come across an individual who behaves like an automaton, who does not know or understand himself, and the only person that he knows is the person that he is supposed to be, whose meaningless chatter has replaced communicative speech, whose synthetic smile has replaced genuine laughter, and whose sense of dull despair has taken the place of genuine pain. Two statements may be said concerning this individual. One is that he suffers from defects of spontaneity and individuality which may seem to be incurable. At the same time it may be said of him he does not differ essentially from the millions of the rest of us who walk upon this earth.

In all of life, there are sequential stages of growth and development. A child learns to turn over, to sit up, to crawl, and then to walk and run. Each step is important and each one takes time. No step can be skipped.

This is true in all phases of life, in all areas of development, whether it be learning to play the piano or communicate effectively with a working associate. It is true with individuals, with marriages, with families, and with organizations.

We know and accept this fact or principle of process in the area of physical things, but to understand it in emotional areas, in human relations, and even in the area of personal character is less common and more difficult. And even if we
understand it, to accept it and to live in harmony with it are even less common and more difficult. Consequently, we sometimes look for a shortcut, expecting to be able to skip some of these vital steps in order to save time and effort and still reap the desired result.

But what happens when we attempt to shortcut a natural process in our growth and development? If you are only an average tennis player but decide to play at a higher level in order to make a better impression, what will result? Would positive thinking alone enable you to compete effectively against a professional? What if you were to lead your friends to believe you could play the piano at concert hall level while your actual present skill was that of a beginner?

The answers are obvious. It is simply impossible to violate, ignore, or shortcut this development process. It is contrary to nature, and attempting to seek such a shortcut only results in disappointment and frustration.

On a ten-point scale, if I am at level two in any field, and desire to move to level five, I must first take the step toward level three. “A thousand-mile journey begins with the first step” and can only be taken one step at a time.

If you don’t let a teacher know at what level you are—by asking a question, or revealing your ignorance—you will not learn or grow. You cannot pretend for long, for you will eventually be found out. Admission of ignorance is often the first step in our education. Thoreau taught, “How can we remember our ignorance, which our growth requires, when we are using our knowledge all the time?”

I recall one occasion when two young women, daughters of a friend of mine, came to me tearfully, complaining about their father’s harshness and lack of understanding. They were afraid to open up with their parents for fear of the consequences. And yet they desperately needed their parents’ love, understanding, and guidance.

I talked with the father and found that he was intellectually aware of what was happening. But while he admitted he had a temper problem, he refused to take responsibility for it and to honestly accept the fact that his emotional development level was low. It was more than his pride could swallow to take the first step toward change.

To relate effectively with a wife, a husband, children, friends, or working associates, we must learn to listen. And this requires emotional strength. Listening involves patience, openness, and the desire to understand—highly developed qualities of character. It’s so much easier to operate from a low emotional level and to give high-level advice.

Our level of development is fairly obvious with tennis or piano playing, where it is impossible to pretend. But it is not so obvious in the areas of character and
emotional development. We can “pose” and “put on” for a stranger or an associate. We can pretend. And for a while we can get by with it—at least in public. We might even deceive ourselves. Yet I believe that most of us know the truth of what we really are inside; and I think many of those we live with and work with do as well.

I have seen the consequences of attempting to shortcut this natural process of growth often in the business world, where executives attempt to “buy” a new culture of improved productivity, quality, morale, and customer service with strong speeches, smile training, and external interventions, or through mergers, acquisitions, and friendly or unfriendly takeovers. But they ignore the low-trust climate produced by such manipulations. When these methods don’t work, they look for other Personality Ethic techniques that will—all the time ignoring and violating the natural principles and processes on which a high-trust culture is based.

I remember violating this principle myself as a father many years ago. One day I returned home to my little girl’s third-year birthday party to find her in the corner of the front room, defiantly clutching all of her presents, unwilling to let the other children play with them. The first thing I noticed was several parents in the room witnessing this selfish display. I was embarrassed, and doubly so because at the time I was teaching university classes in human relations. And I knew, or at least felt, the expectation of these parents.

The atmosphere in the room was really charged—the children were crowding around my little daughter with their hands out, asking to play with the presents they had just given, and my daughter was adamantly refusing. I said to myself, “Certainly I should teach my daughter to share. The value of sharing is one of the most basic things we believe in.”

So I first tried a simple request. “Honey, would you please share with your friends the toys they’ve given you?”

“No,” she replied flatly.

My second method was to use a little reasoning. “Honey, if you learn to share your toys with them when they are at your home, then when you go to their homes they will share their toys with you.”

Again, the immediate reply was “No!”

I was becoming a little more embarrassed, for it was evident I was having no influence. The third method was bribery. Very softly I said, “Honey, if you share, I’ve got a special surprise for you. I’ll give you a piece of gum.”

“I don’t want gum!” she exploded.

Now I was becoming exasperated. For my fourth attempt, I resorted to fear and threat. “Unless you share, you will be in real trouble!”
“I don’t care!” she cried. “These are my things. I don’t have to share!”

Finally, I resorted to force. I merely took some of the toys and gave them to the other kids. “Here, kids, play with these.”

Perhaps my daughter needed the experience of possessing the things before she could give them. (In fact, unless I possess something, can I ever really give it?) She needed me as her father to have a higher level of emotional maturity to give her that experience.

But at that moment, I valued the opinion those parents had of me more than the growth and development of my child and our relationship together. I simply made an initial judgment that I was right; she should share, and she was wrong in not doing so.

Perhaps I superimposed a higher-level expectation on her simply because on my own scale I was at a lower level. I was unable or unwilling to give patience or understanding, so I expected her to give things. In an attempt to compensate for my deficiency, I borrowed strength from my position and authority and forced her to do what I wanted her to do.

But borrowing strength builds weakness. It builds weakness in the borrower because it reinforces dependence on external factors to get things done. It builds weakness in the person forced to acquiesce, stunting the development of independent reasoning, growth, and internal discipline. And finally, it builds weakness in the relationship. Fear replaces cooperation, and both people involved become more arbitrary and defensive.

And what happens when the source of borrowed strength—be it superior size or physical strength, position, authority, credentials, status symbols, appearance, or past achievements—changes or is no longer there?

Had I been more mature, I could have relied on my own intrinsic strength—my understanding of sharing and of growth and my capacity to love and nurture—and allowed my daughter to make a free choice as to whether she wanted to share or not to share. Perhaps after attempting to reason with her, I could have turned the attention of the children to an interesting game, taking all that emotional pressure off my child. I’ve learned that once children gain a sense of real possession, they share very naturally, freely, and spontaneously.

My experience has been that there are times to teach and times not to teach. When relationships are strained and the air charged with emotion, an attempt to teach is often perceived as a form of judgment and rejection. But to take the child alone, quietly, when the relationship is good and to discuss the teaching or the value seems to have much greater impact. It may have been that the emotional maturity to do that was beyond my level of patience and internal control at the time.
Perhaps a sense of possessing needs to come before a sense of genuine sharing. Many people who give mechanically or refuse to give and share in their marriages and families may never have experienced what it means to possess themselves, their own sense of identity and self-worth. Really helping our children grow may involve being patient enough to allow them the sense of possession as well as being wise enough to teach them the value of giving and providing the example ourselves.
**The Way We See the Problem Is the Problem**

People are intrigued when they see good things happening in the lives of individuals, families, and organizations that are based on solid principles. They admire such personal strength and maturity, such family unity and teamwork, such adaptive synergistic organizational culture.

And their immediate request is very revealing of their basic paradigm. “How do you do it? Teach me the techniques.” What they’re really saying is, “Give me some quick fix advice or solution that will relieve the pain in my own situation.”

They will find people who will meet their wants and teach these things; and for a short time, skills and techniques may appear to work. They may eliminate some of the cosmetic or acute problems through social aspirin and band-aids.

But the underlying chronic condition remains, and eventually new acute symptoms will appear. The more people are into quick fix and focus on the acute problems and pain, the more that very approach contributes to the underlying chronic condition.

The way we see the problem is the problem.

Look again at some of the concerns that introduced this chapter, and at the impact of Personality Ethic thinking.

*I’ve taken course after course on effective management training. I expect a lot out of my employees and I work hard to be friendly toward them and to treat them right. But I don’t feel any loyalty from them. I think if I were home sick for a day, they’d spend most of their time gabbing at the water fountain. Why can’t I train them to be independent and responsible—or find employees who can be?*

The Personality Ethic tells me I could take some kind of dramatic action—shake things up, make heads roll—that would make my employees shape up and appreciate what they have. Or that I could find some motivational training program that would get them committed. Or even that I could hire new people that would do a better job.

But is it possible that under that apparently disloyal behavior, these employees question whether I really act in their best interest? Do they feel like I’m treating
them as mechanical objects? Is there some truth to that?

Deep inside, is that really the way I see them? Is there a chance the way I look at the people who work for me is part of the problem?

There’s so much to do. And there’s never enough time. I feel pressured and hassled all day, every day, seven days a week. I’ve attended time management seminars and I’ve tried half a dozen different planning systems. They’ve helped some, but I still don’t feel I’m living the happy, productive, peaceful life I want to live.

The Personality Ethic tells me there must be something out there—some new planner or seminar that will help me handle all these pressures in a more efficient way.

But is there a chance that efficiency is not the answer? Is getting more things done in less time going to make a difference—or will it just increase the pace at which I react to the people and circumstances that seem to control my life?

Could there be something I need to see in a deeper, more fundamental way—some paradigm within myself that affects the way I see my time, my life, and my own nature?

My marriage has gone flat. We don’t fight or anything; we just don’t love each other anymore. We’ve gone to counseling; we’ve tried a number of things, but we just can’t seem to rekindle the feeling we used to have.

The Personality Ethic tells me there must be some new book or some seminar where people get all their feelings out that would help my wife understand me better. Or maybe that it’s useless, and only a new relationship will provide the love I need.

But is it possible that my spouse isn’t the real problem? Could I be empowering my spouse’s weaknesses and making my life a function of the way I’m treated?

Do I have some basic paradigm about my spouse, about marriage, about what love really is, that is feeding the problem?
Can you see how fundamentally the paradigms of the Personality Ethic affect the very way we see our problems as well as the way we attempt to solve them? Whether people see it or not, many are becoming disillusioned with the empty promises of the Personality Ethic. As I travel around the country and work with organizations, I find that long-term thinking executives are simply turned off by psych up psychology and “motivational” speakers who have nothing more to share than entertaining stories mingled with platitudes. They want substance; they want process. They want more than aspirin and band-aids. They want to solve the chronic underlying problems and focus on the principles that bring long-term results.
A New Level of Thinking

Albert Einstein observed, “The significant problems we face cannot be solved at the same level of thinking we were at when we created them.”

As we look around us and within us and recognize the problems created as we live and interact within the Personality Ethic, we begin to realize that these are deep, fundamental problems that cannot be solved on the superficial level on which they were created.

We need a new level, a deeper level of thinking—a paradigm based on the principles that accurately describe the territory of effective human being and interacting—to solve these deep concerns.

This new level of thinking is what Seven Habits of Highly Effective People is about. It’s a principle-centered, character-based, “inside-out” approach to personal and interpersonal effectiveness.

“Inside-out” means to start first with self; even more fundamentally, to start with the most inside part of self—with your paradigms, your character, and your motives.

It says if you want to have a happy marriage, be the kind of person who generates positive energy and sidesteps negative energy rather than empowering it. If you want to have a more pleasant, cooperative teenager, be a more understanding, empathic, consistent, loving parent. If you want to have more freedom, more latitude in your job, be a more responsible, a more helpful, a more contributing employee. If you want to be trusted, be trustworthy. If you want the secondary greatness of recognized talent, focus first on primary greatness of character.

The inside-out approach says that private victories precede public victories, that making and keeping promises to ourselves precedes making and keeping promises to others. It says it is futile to put personality ahead of character, to try to improve relationships with others before improving ourselves.

Inside-out is a process—a continuing process of renewal based on the natural laws that govern human growth and progress. It’s an upward spiral of growth that leads to progressively higher forms of responsible independence and effective interdependence.

I have had the opportunity to work with many people—wonderful people, talented people, people who deeply want to achieve happiness and success,
people who are searching, people who are hurting. I’ve worked with business executives, college students, church and civic groups, families and marriage partners. And in all of my experience, I have never seen lasting solutions to problems, lasting happiness and success, that came from the outside in.

What I have seen result from the outside-in paradigm is unhappy people who feel victimized and immobilized, who focus on the weaknesses of other people and the circumstances they feel are responsible for their own stagnant situation. I’ve seen unhappy marriages where each spouse wants the other to change, where each is confessing the other’s “sins,” where each is trying to shape up the other. I’ve seen labor management disputes where people spend tremendous amounts of time and energy trying to create legislation that would force people to act as though the foundation of trust were really there.

Members of our family have lived in three of the “hottest” spots on earth—South Africa, Israel, and Ireland—and I believe the source of the continuing problems in each of these places has been the dominant social paradigm of outside-in. Each involved group is convinced the problem is “out there” and if “they” (meaning others) would “shape up” or suddenly “ship out” of existence, the problem would be solved.

Inside-out is a dramatic paradigm shift for most people, largely because of the powerful impact of conditioning and the current social paradigm of the Personality Ethic.

But from my own experience—both personal and in working with thousands of other people—and from careful examination of successful individuals and societies throughout history, I am persuaded that many of the principles embodied in the Seven Habits are already deep within us, in our conscience and our common sense. To recognize and develop them and to use them in meeting our deepest concerns, we need to think differently, to shift our paradigms to a new, deeper, “inside-out” level.

As we sincerely seek to understand and integrate these principles into our lives, I am convinced we will discover and rediscover the truth of T. S. Eliot’s observation:

_We must not cease from exploration and the end of all our exploring will be to arrive where we began and to know the place for the first time._
THE SEVEN HABITS—
AN OVERVIEW

We are what we repeatedly do.
Excellence, then, is not an act, but a habit.

ARISTOTLE

Our character, basically, is a composite of our habits. “Sow a thought, reap an action; sow an action, reap a habit; sow a habit, reap a character; sow a character, reap a destiny,” the maxim goes.

Habits are powerful factors in our lives. Because they are consistent, often unconscious patterns, they constantly, daily, express our character and produce our effectiveness … or ineffectiveness.

As Horace Mann, the great educator, once said, “Habits are like a cable. We weave a strand of it everyday and soon it cannot be broken.” I personally do not agree with the last part of his expression. I know they can be broken. Habits can be learned and unlearned. But I also know it isn’t a quick fix. It involves a process and a tremendous commitment.

Those of us who watched the lunar voyage of Apollo 11 were transfixed as we saw the first men walk on the moon and return to earth. Superlatives such as “fantastic” and “incredible” were inadequate to describe those eventful days. But to get there, those
astronauts literally had to break out of the tremendous gravity pull of the earth. More energy was spent in the first few minutes of lift-off, in the first few miles of travel, than was used over the next several days to travel half a million miles.

Habits, too, have tremendous gravity pull—more than most people realize or would admit. Breaking deeply imbedded habitual tendencies such as procrastination, impatience, criticalness, or selfishness that violate basic principles of human effectiveness involves more than a little willpower and a few minor changes in our lives. “Lift off” takes a tremendous effort, but once we break out of the gravity pull, our freedom takes on a whole new dimension.

Like any natural force, gravity pull can work with us or against us. The gravity pull of some of our habits may currently be keeping us from going where we want to go. But it is also gravity pull that keeps our world together, that keeps the planets in their orbits and our universe in order. It is a powerful force, and if we use it effectively, we can use the gravity pull of habit to create the cohesiveness and order necessary to establish effectiveness in our lives.
“Habits” Defined

For our purposes, we will define a habit as the intersection of knowledge, skill, and desire.

Knowledge is the theoretical paradigm, the what to do and the why. Skill is the how to do. And desire is the motivation, the want to do. In order to make something a habit in our lives, we have to have all three.

I may be ineffective in my interactions with my work associates, my spouse, or my children because I constantly tell them what I think, but I never really listen to them. Unless I search out correct principles of human interaction, I may not even know I need to listen.

Even if I do know that in order to interact effectively with others I really need to listen to them, I may not have the skill. I may not know how to really listen deeply to another human being.

But knowing I need to listen and knowing how to listen is not enough. Unless I want to listen, unless I have the desire, it won’t be a habit in my life. Creating a habit requires work in all three dimensions.

The being/seeing change is an upward process—being changing seeing, which in turn changes being, and so forth, as we move in an upward spiral of growth. By working on knowledge, skill, and desire, we can break through to new levels of personal and interpersonal effectiveness as we break with old paradigms that may have been a source of pseudo-security for years.

It’s sometimes a painful process. It’s a change that has to be motivated by a higher purpose, by the willingness to subordinate what you think you want now for what you want later. But this process produces happiness, “the object and design of our existence.” Happiness can be defined, in part at least, as the fruit of the desire and ability to sacrifice what we want now for what we want eventually.
EFFECTIVE HABITS
Internalized principles and patterns of behavior
The Maturity Continuum

The Seven Habits are not a set of separate or piecemeal psych-up formulas. In harmony with the natural laws of growth, they provide an incremental, sequential, highly integrated approach to the development of personal and interpersonal effectiveness. They move us progressively on a Maturity Continuum from dependence to independence to interdependence.

We each begin life as an infant, totally dependent on others. We are directed, nurtured, and sustained by others. Without this nurturing, we would only live for a few hours or a few days at the most.

Then gradually, over the ensuing months and years, we become more and more independent—physically, mentally, emotionally, and financially—until eventually we can essentially take care of ourselves, becoming inner-directed and self-reliant.

As we continue to grow and mature, we become increasingly aware that all of nature is interdependent, that there is an ecological system that governs nature, including society. We further discover that the higher reaches of our nature have to do with our relationships with others—that human life also is interdependent.

Our growth from infancy to adulthood is in accordance with natural law. And there are many dimensions to growth. Reaching our full physical maturity, for example, does not necessarily assure us of simultaneous emotional or mental maturity. On the other hand, a person’s physical dependence does not mean that he or she is mentally or emotionally immature.

On the maturity continuum, dependence is the paradigm of you—you take care of me; you come through for me; you didn’t come through; I blame you for the results.

Independence is the paradigm of I—I can do it; I am responsible; I am self-reliant; I can choose.

Interdependence is the paradigm of we—we can do it; we can cooperate; we can combine our talents and abilities and create something greater together.

Dependent people need others to get what they want. Independent people can get what they want through their own effort. Interdependent people combine their own efforts with the efforts of others to achieve their greatest success.

If I were physically dependent—paralyzed or disabled or limited in some physical way—I would need you to help me. If I were emotionally dependent,
my sense of worth and security would come from your opinion of me. If you didn’t like me, it could be devastating. If I were intellectually dependent, I would count on you to do my thinking for me, to think through the issues and problems of my life.

If I were independent, physically, I could pretty well make it on my own. Mentally, I could think my own thoughts, I could move from one level of abstraction to another. I could think creatively and analytically and organize and express my thoughts in understandable ways. Emotionally, I would be validated from within. I would be inner directed. My sense of worth would not be a function of being liked or treated well.

It’s easy to see that independence is much more mature than dependence. Independence is a major achievement in and of itself. But independence is not supreme.

Nevertheless, the current social paradigm enthrones independence. It is the avowed goal of many individuals and social movements. Most of the self-improvement material puts independence on a pedestal, as though communication, teamwork, and cooperation were lesser values.

But much of our current emphasis on independence is a reaction to dependence—to having others control us, define us, use us, and manipulate us.

The little understood concept of interdependence appears to many to smack of dependence, and therefore, we find people, often for selfish reasons, leaving their marriages, abandoning their children, and forsaking all kinds of social responsibility—all in the name of independence.

The kind of reaction that results in people “throwing off their shackles,” becoming “liberated,” “asserting themselves,” and “doing their own thing” often reveals more fundamental dependencies that cannot be run away from because they are internal rather than external—dependencies such as letting the weaknesses of other people ruin our emotional lives or feeling victimized by people and events out of our control.

Of course, we may need to change our circumstances. But the dependence problem is a personal maturity issue that has little to do with circumstances. Even with better circumstances, immaturity and dependence often persist.

True independence of character empowers us to act rather than be acted upon. It frees us from our dependence on circumstances and other people and is a worthy, liberating goal. But it is not the ultimate goal in effective living.

Independent thinking alone is not suited to interdependent reality. Independent people who do not have the maturity to think and act interdependently may be good individual producers, but they won’t be good leaders or team players. They’re not coming from the paradigm of interdependence necessary to succeed
in marriage, family, or organizational reality.

Life is, by nature, highly interdependent. To try to achieve maximum effectiveness through independence is like trying to play tennis with a golf club—the tool is not suited to the reality.

Interdependence is a far more mature, more advanced concept. If I am physically interdependent, I am self-reliant and capable, but I also realize that you and I working together can accomplish far more than, even at my best, I could accomplish alone. If I am emotionally interdependent, I derive a great sense of worth within myself, but I also recognize the need for love, for giving, and for receiving love from others. If I am intellectually interdependent, I realize that I need the best thinking of other people to join with my own.

As an interdependent person, I have the opportunity to share myself deeply, meaningfully, with others, and I have access to the vast resources and potential of other human beings.

Interdependence is a choice only independent people can make. Dependent people cannot choose to become interdependent. They don’t have the character to do it; they don’t own enough of themselves.

That’s why Habits 1, 2, and 3 in the following chapters deal with self-mastery. They move a person from dependence to independence. They are the “Private Victories,” the essence of character growth. Private victories precede public victories. You can’t invert that process anymore than you can harvest a crop before you plant it. It’s inside-out.

As you become truly independent, you have the foundation for effective interdependence. You have the character base from which you can effectively work on the more personality-oriented “Public Victories” of teamwork, cooperation, and communication in Habits 4, 5, and 6.

That does not mean you have to be perfect in Habits 1, 2, and 3 before working on Habits 4, 5, and 6. Understanding the sequence will help you manage your growth more effectively, but I’m not suggesting that you put yourself in isolation for several years until you fully develop Habits 1, 2, and 3.

As part of an interdependent world, you have to relate to that world every day. But the acute problems of that world can easily obscure the chronic character causes. Understanding how what you are impacts every interdependent interaction will help you to focus your efforts sequentially, in harmony with the natural laws of growth.

Habit 7 is the habit of renewal—a regular, balanced renewal of the four basic dimensions of life. It circles and embodies all the other habits. It is the habit of continuous improvement that creates the upward spiral of growth that lifts you to new levels of understanding and living each of the habits as you come around to
them on a progressively higher plane.*

The diagram on the next page is a visual representation of the sequence and the interdependence of the Seven Habits, and will be used throughout this book as we explore both the sequential relationship between the habits and also their synergy—how, in relating to each other, they create bold new forms of each other that add even more to their value. Each concept or habit will be highlighted as it is introduced.
Effectiveness Defined

The Seven Habits are habits of effectiveness. Because they are based on principles, they bring the maximum long-term beneficial results possible. They become the basis of a person’s character, creating an empowering center of correct maps from which an individual can effectively solve problems, maximize opportunities, and continually learn and integrate other principles in an upward spiral of growth.

They are also habits of effectiveness because they are based on a paradigm of effectiveness that is in harmony with a natural law, a principle I call the “P/PC Balance,” which many people break themselves against. This principle can be easily understood by remembering Aesop’s fable of the goose and the golden egg.

This fable is the story of a poor farmer who one day discovers in the nest of his pet goose a glittering golden egg. At first, he thinks it must be some kind of trick. But as he starts to throw the egg aside, he has second thoughts and takes it in to be appraised instead.

The egg is pure gold! The farmer can’t believe his good fortune. He becomes even more incredulous the following day when the experience is repeated. Day after day, he awakens to rush to the nest and find another golden egg. He becomes fabulously wealthy; it all seems too good to be true.
But with his increasing wealth comes greed and impatience. Unable to wait day after day for the golden eggs, the farmer decides he will kill the goose and get them all at once. But when he opens the goose, he finds it empty. There are no golden eggs—and now there is no way to get any more. The farmer has destroyed the goose that produced them.

I suggest that within this fable is a natural law, a principle—the basic definition of effectiveness. Most people see effectiveness from the golden egg paradigm: the more you produce, the more you do, the more effective you are.

But as the story shows, true effectiveness is a function of two things: what is produced (the golden eggs) and the producing asset or capacity to produce (the goose).

If you adopt a pattern of life that focuses on golden eggs and neglects the goose, you will soon be without the asset that produces golden eggs. On the other hand, if you only take care of the goose with no aim toward the golden eggs, you soon won’t have the wherewithal to feed yourself or the goose.
Effectiveness lies in the balance—what I call the P/PC Balance. \( P \) stands for \textit{production} of desired results, the golden eggs. \( PC \) stands for \textit{production capability}, the ability or asset that produces the golden eggs.
THREE KINDS OF ASSETS

Basically, there are three kinds of assets: physical, financial, and human. Let’s look at each one in turn.

A few years ago, I purchased a physical asset—a power lawnmower. I used it over and over again without doing anything to maintain it. The mower worked well for two seasons, but then it began to break down. When I tried to revive it with service and sharpening, I discovered the engine had lost over half its original power capacity. It was essentially worthless.

Had I invested in PC—in preserving and maintaining the asset—I would still be enjoying its P—the mowed lawn. As it was, I had to spend far more time and money replacing the mower than I ever would have spent, had I maintained it. It simply wasn’t effective.

In our quest for short-term returns, or results, we often ruin a prized physical asset—a car, a computer, a washer or dryer, even our body or our environment. Keeping P and PC in balance makes a tremendous difference in the effective use of physical assets.

It also powerfully impacts the effective use of financial assets. How often do people confuse principal with interest? Have you ever invaded principal to increase your standard of living, to get more golden eggs? The decreasing principal has decreasing power to produce interest or income. And the dwindling capital becomes smaller and smaller until it no longer supplies even basic needs.

Our most important financial asset is our own capacity to earn. If we don’t continually invest in improving our own PC, we severely limit our options. We’re locked into our present situation, running scared of our corporation or our boss’s opinion of us, economically dependent and defensive. Again, it simply isn’t effective.

In the human area, the P/PC Balance is equally fundamental, but even more important, because people control physical and financial assets.

When two people in a marriage are more concerned about getting the golden eggs, the benefits, than they are in preserving the relationship that makes them possible, they often become insensitive and inconsiderate, neglecting the little kindnesses and courtesies so important to a deep relationship. They begin to use control levers to manipulate each other, to focus on their own needs, to justify their own position and look for evidence to show the wrongness of the other
person. The love, the richness, the softness and spontaneity begin to deteriorate. The goose gets sicker day by day.

And what about a parent’s relationship with a child? When children are little, they are very dependent, very vulnerable. It becomes so easy to neglect the PC work—the training, the communicating, the relating, the listening. It’s easy to take advantage, to manipulate, to get what you want the way you want it—right now! You’re bigger, you’re smarter, and you’re right! So why not just tell them what to do? If necessary, yell at them, intimidate them, insist on your way.

Or you can indulge them. You can go for the golden egg of popularity, of pleasing them, giving them their way all the time. Then they grow up without any internal sense of standards or expectations, without a personal commitment to being disciplined or responsible.

Either way—authoritarian or permissive—you have the golden egg mentality. You want to have your way or you want to be liked. But what happens, meantime, to the goose? What sense of responsibility, of self-discipline, of confidence in the ability to make good choices or achieve important goals is a child going to have a few years down the road? And what about your relationship? When he reaches those critical teenage years, the identity crises, will he know from his experience with you that you will listen without judging, that you really, deeply care about him as a person, that you can be trusted, no matter what? Will the relationship be strong enough for you to reach him, to communicate with him, to influence him?

Suppose you want your daughter to have a clean room—that’s P, production, the golden egg. And suppose you want her to clean it—that’s PC, production capability. Your daughter is the goose, the asset, that produces the golden egg.

If you have P and PC in balance, she cleans the room cheerfully, without being reminded, because she is committed and has the discipline to stay with the commitment. She is a valuable asset, a goose that can produce golden eggs.

But if your paradigm is focused on production, on getting the room clean, you might find yourself nagging her to do it. You might even escalate your efforts to threatening or yelling, and in your desire to get the golden egg, you undermine the health and welfare of the goose.

Let me share with you an interesting PC experience I had with one of my daughters. We were planning a private date, which is something I enjoy regularly with each of my children. We find that the anticipation of the date is as satisfying as the realization.

So I approached my daughter and said, “Honey, tonight’s your night. What do
you want to do?”
“Oh, Dad, that’s okay,” she replied.
“No, really,” I said. “What would you like to do?”
“Well,” she finally said, “what I want to do, you don’t really want to do.”
“Really, honey,” I said earnestly, “I want to do it. No matter what, it’s your choice.”
“I want to go see Star Wars,” she replied. “But I know you don’t like Star Wars. You slept through it before. You don’t like these fantasy movies. That’s okay, Dad.”
“No, honey, if that’s what you’d like to do, I’d like to do it.”
“Dad, don’t worry about it. We don’t always have to have this date.” She paused and then added, “But you know why you don’t like Star Wars? It’s because you don’t understand the philosophy and training of a Jedi Knight.”
“What?”
“You know the things you teach, Dad? Those are the same things that go into the training of a Jedi Knight.”
“Really? Let’s go to Star Wars!”
And we did. She sat next to me and gave me the paradigm. I became her student, her learner. It was totally fascinating. I could begin to see out of a new paradigm the whole way a Jedi Knight’s basic philosophy in training is manifested in different circumstances.
That experience was not a planned P experience; it was the serendipitous fruit of a PC investment. It was bonding and very satisfying. But we enjoyed golden eggs, too, as the goose—the quality of the relationship—was significantly fed.
One of the immensely valuable aspects of any correct principle is that it is valid and applicable in a wide variety of circumstances. Throughout this book, I would like to share with you some of the ways in which these principles apply to organizations, including families, as well as to individuals.

When people fail to respect the P/PC Balance in their use of physical assets in organizations, they decrease organizational effectiveness and often leave others with dying geese.

For example, a person in charge of a physical asset, such as a machine, may be eager to make a good impression on his superiors. Perhaps the company is in a rapid growth stage and promotions are coming fast. So he produces at optimum levels—no downtime, no maintenance. He runs the machine day and night. The production is phenomenal, costs are down, and profits skyrocket. Within a short time, he’s promoted. Golden eggs!

But suppose you are his successor on the job. You inherit a very sick goose, a machine that, by this time, is rusted and starts to break down. You have to invest heavily in downtime and maintenance. Costs skyrocket; profits nose-dive. And who gets blamed for the loss of golden eggs? You do. Your predecessor liquidated the asset, but the accounting system only reported unit production, costs, and profit.

The P/PC Balance is particularly important as it applies to the human assets of an organization—the customers and the employees.

I know of a restaurant that served a fantastic clam chowder and was packed with customers every day at lunchtime. Then the business was sold, and the new owner focused on golden eggs—he decided to water down the chowder. For about a month, with costs down and revenues constant, profits zoomed. But little by little, the customers began to disappear. Trust was gone, and business dwindled to almost nothing. The new owner tried desperately to reclaim it, but he had neglected the customers, violated their trust, and lost the asset of customer loyalty. There was no more goose to produce the golden egg.

There are organizations that talk a lot about the customer and then completely neglect the people that deal with the customer—the employees. The PC principle is to always treat your employees exactly as you want them to treat your best customers.
You can buy a person’s hand, but you can’t buy his heart. His heart is where his enthusiasm, his loyalty is. You can buy his back, but you can’t buy his brain. That’s where his creativity is, his ingenuity, his resourcefulness.

PC work is treating employees as volunteers just as you treat customers as volunteers, because that’s what they are. They volunteer the best part—their hearts and minds.

I was in a group once where someone asked, “How do you shape up lazy and incompetent employees?” One man responded, “Drop hand grenades!” Several others cheered that kind of macho management talk, that “shape up or ship out” supervision approach.

But another person in the group asked, “Who picks up the pieces?”

“No pieces.”

“Well, why don’t you do that to your customers?” the other man replied. “Just say, ‘Listen, if you’re not interested in buying, you can just ship out of this place.’”

He said, “You can’t do that to customers.”

“Well, how come you can do it to employees?”

“Because they’re in your employ.”

“I see. Are your employees devoted to you? Do they work hard? How’s the turnover?”

“Are you kidding? You can’t find good people these days. There’s too much turnover, absenteeism, moonlighting. People just don’t care anymore.”

That focus on golden eggs—that attitude, that paradigm—is totally inadequate to tap into the powerful energies of the mind and heart of another person. A short-term bottom line is important, but it isn’t all-important.

Effectiveness lies in the balance. Excessive focus on P results in ruined health, worn-out machines, depleted bank accounts, and broken relationships. Too much focus on PC is like a person who runs three or four hours a day, bragging about the extra ten years of life it creates, unaware he’s spending them running. Or a person endlessly going to school, never producing, living on other people’s golden eggs—the eternal student syndrome.

To maintain the P/PC Balance, the balance between the golden egg (production) and the health and welfare of the goose (production capability) is often a difficult judgment call. But I suggest it is the very essence of effectiveness. It balances short term with long term. It balances going for the
grade and paying the price to get an education. It balances the desire to have a room clean and the building of a relationship in which the child is internally committed to do it—cheerfully, willingly, without external supervision.

It’s a principle you can see validated in your own life when you burn the candle at both ends to get more golden eggs and wind up sick or exhausted, unable to produce any at all; or when you get a good night’s sleep and wake up ready to produce throughout the day.

You can see it when you press to get your own way with someone and somehow feel an emptiness in the relationship; or when you really take time to invest in a relationship and you find the desire and ability to work together, to communicate, takes a quantum leap.

The P/PC Balance is the very essence of effectiveness. It’s validated in every arena of life. We can work with it or against it, but it’s there. It’s a lighthouse. It’s the definition and paradigm of effectiveness upon which the Seven Habits in this book are based.
HOW TO USE THIS BOOK

Before we begin work on the Seven Habits of Highly Effective People, I would like to suggest two paradigm shifts that will greatly increase the value you will receive from this material.

First, I would recommend that you not “see” this material as a book, in the sense that it is something to read once and put on a shelf.

You may choose to read it completely through once for a sense of the whole. But the material is designed to be a companion in the continual process of change and growth. It is organized incrementally and with suggestions for application at the end of each habit so that you can study and focus on any particular habit as you are ready.

As you progress to deeper levels of understanding and implementation, you can go back time and again to the principles contained in each habit and work to expand your knowledge, skill, and desire.

Second, I would suggest that you shift your paradigm of your own involvement in this material from the role of learner to that of teacher. Take an inside-out approach, and read with the purpose in mind of sharing or discussing what you learn with someone else within 48 hours after you learn it.

If you had known, for example, that you would be teaching the material on the P/PC Balance principle to someone else within 48 hours, would it have made a difference in your reading experience? Try it now as you read the final section in this chapter. Read as though you are going to teach it to your spouse, your child, a business associate, or a friend today or tomorrow, while it is still fresh, and notice the difference in your mental and emotional process.

I guarantee that if you approach the material in each of the following chapters in this way, you will not only better remember what you read, but your perspective will be expanded, your understanding deepened, and your motivation to apply the material increased.

In addition, as you openly, honestly share what you’re learning with others, you may be surprised to find that negative labels or perceptions others may have of you tend to disappear. Those you teach will see you as a changing, growing person, and will be more inclined to be helpful and supportive as you work, perhaps together, to integrate the Seven Habits into your lives.
WHAT YOU CAN EXPECT

In the last analysis, as Marilyn Ferguson observed, “No one can persuade another to change. Each of us guards a gate of change that can only be opened from the inside. We cannot open the gate of another, either by argument or by emotional appeal.”

If you decide to open your “gate of change” to really understand and live the principles embodied in the Seven Habits, I feel comfortable in assuring you several positive things will happen.

First, your growth will be evolutionary, but the net effect will be revolutionary. Would you not agree that the P/PC Balance principle alone, if fully lived, would transform most individuals and organizations?

The net effect of opening the “gate of change” to the first three habits—the habits of Private Victory—will be significantly increased self-confidence. You will come to know yourself in a deeper, more meaningful way—your nature, your deepest values and your unique contribution capacity. As you live your values, your sense of identity, integrity, control, and inner-directedness will infuse you with both exhilaration and peace. You will define yourself from within, rather than by people’s opinions or by comparisons to others. “Wrong” and “right” will have little to do with being found out.

Ironically, you’ll find that as you care less about what others think of you, you will care more about what others think of themselves and their worlds, including their relationship with you. You’ll no longer build your emotional life on other people’s weaknesses. In addition, you’ll find it easier and more desirable to change because there is something—some core deep within—that is essentially changeless.

As you open yourself to the next three habits—the habits of Public Victory—you will discover and unleash both the desire and the resources to heal and rebuild important relationships that have deteriorated, or even broken. Good relationships will improve—become deeper, more solid, more creative, and more adventuresome.

The seventh habit, if deeply internalized, will renew the first six and will make you truly independent and capable of effective interdependence. Through it, you can charge your own batteries.

Whatever your present situation, I assure you that you are not your habits. You
can replace old patterns of self-defeating behavior with new patterns, new habits of effectiveness, happiness, and trust-based relationships.

With genuine caring, I encourage you to open the gate of change and growth as you study these habits. Be patient with yourself. Self-growth is tender; it’s holy ground. There’s no greater investment.

It’s obviously not a quick fix. But I assure you, you will feel benefits and see immediate payoffs that will be encouraging. In the words of Thomas Paine, “That which we obtain too easily, we esteem too lightly. It is dearness only which gives everything its value. Heaven knows how to put a proper price on its goods.”
Part Two

PRIVATE VICTORY
Habit 1
Be Proactive
PRINCIPLES OF PERSONAL VISION

I know of no more encouraging fact than the unquestionable ability of man to elevate his life by conscious endeavor.

HENRY DAVID THOREAU

AS YOU READ THIS BOOK, try to stand apart from yourself. Try to project your consciousness upward into a corner of the room and see yourself, in your mind’s eye, reading. Can you look at yourself almost as though you were someone else?

Now try something else. Think about the mood you are now in. Can you identify it? What are you feeling? How would you describe your present mental state?

Now think for a minute about how your mind is working. Is it quick and alert? Do you sense that you are torn between doing this mental exercise and evaluating the point to be made out of it?

Your ability to do what you just did is uniquely human. Animals do not possess this ability. We call it “self-awareness” or the ability to think about your very thought process. This is the reason why man has dominion over all things in the world and why he can make significant advances from generation to generation.
This is why we can evaluate and learn from others’ experiences as well as our own. This is also why we can make and break our habits.

We are not our feelings. We are not our moods. We are not even our thoughts. The very fact that we can think about these things separates us from them and from the animal world. Self-awareness enables us to stand apart and examine even the way we “see” ourselves—our self-paradigm, the most fundamental paradigm of effectiveness. It affects not only our attitudes and behaviors, but also how we see other people. It becomes our map of the basic nature of mankind.

In fact, until we take how we see ourselves (and how we see others) into account, we will be unable to understand how others see and feel about themselves and their world. Unaware, we will project our intentions on their behavior and call ourselves objective.

This significantly limits our personal potential and our ability to relate to others as well. But because of the unique human capacity of self-awareness, we can examine our paradigms to determine whether they are reality-or principle-based or if they are a function of conditioning and conditions.
THE SOCIAL MIRROR

If the only vision we have of ourselves comes from the social mirror—from the current social paradigm and from the opinions, perceptions, and paradigms of the people around us—our view of ourselves is like the reflection in the crazy mirror room at the carnival.

“You’re never on time.”

“Why can’t you ever keep things in order?”

“You must be an artist!”

“You eat like a horse!”

“I can’t believe you won!”

“This is so simple. Why can’t you understand?”

These visions are disjointed and out of proportion. They are often more projections than reflections, projecting the concerns and character weaknesses of people giving the input rather than accurately reflecting what we are.

The reflection of the current social paradigm tells us we are largely determined by conditioning and conditions. While we have acknowledged the tremendous power of conditioning in our lives, to say that we are determined by it, that we have no control over that influence, creates quite a different map.

There are actually three social maps—three theories of determinism widely accepted, independently or in combination, to explain the nature of man. Genetic determinism basically says your grandparents did it to you. That’s why you have such a temper. Your grandparents had short tempers and it’s in your DNA. It just goes through the generations and you inherited it. In addition, you’re Irish, and that’s the nature of Irish people.

Psychic determinism basically says your parents did it to you. Your upbringing, your childhood experience essentially laid out your personal tendencies and your character structure. That’s why you’re afraid to be in front of a group. It’s the way your parents brought you up. You feel terribly guilty if you make a mistake because you “remember” deep inside the emotional scripting when you were very vulnerable and tender and dependent. You “remember” the emotional punishment, the rejection, the comparison with somebody else when you didn’t perform as well as expected.

Environmental determinism basically says your boss is doing it to you—or your spouse, or that bratty teenager, or your economic situation, or national
policies. Someone or something in your environment is responsible for your situation.

Each of these maps is based on the stimulus/response theory we most often think of in connection with Pavlov’s experiments with dogs. The basic idea is that we are conditioned to respond in a particular way to a particular stimulus.

How accurately and functionally do these deterministic maps describe the territory? How clearly do these mirrors reflect the true nature of man? Do they become self-fulfilling prophecies? Are they based on principles we can validate within ourselves?
**Between Stimulus and Response**

In answer to those questions, let me share with you the catalytic story of Viktor Frankl.

Frankl was a determinist raised in the tradition of Freudian psychology, which postulates that whatever happens to you as a child shapes your character and personality and basically governs your whole life. The limits and parameters of your life are set, and, basically, you can’t do much about it.

Frankl was also a psychiatrist and a Jew. He was imprisoned in the death camps of Nazi Germany, where he experienced things that were so repugnant to our sense of decency that we shudder to even repeat them.

His parents, his brother, and his wife died in the camps or were sent to the gas ovens. Except for his sister, his entire family perished. Frankl himself suffered torture and innumerable indignities, never knowing from one moment to the next if his path would lead to the ovens or if he would be among the “saved” who would remove the bodies or shovel out the ashes of those so fated.

One day, naked and alone in a small room, he began to become aware of what he later called “the last of the human freedoms”—the freedom his Nazi captors could not take away. They could control his entire environment, they could do what they wanted to his body, but Viktor Frankl himself was a self-aware being who could look as an observer at his very involvement. His basic identity was intact. *He could decide within himself how all of this was going to affect him.*

Between what happened to him, or the stimulus, and his response to it, was his freedom or power to choose that response.

In the midst of his experiences, Frankl would project himself into different circumstances, such as lecturing to his students after his release from the death camps. He would describe himself in the classroom, in his mind’s eye, and give his students the lessons he was learning during his very torture.

Through a series of such disciplines—mental, emotional, and moral, principally using memory and imagination—he exercised his small, embryonic freedom until it grew larger and larger, until he had more freedom than his Nazi captors. They had more liberty, more options to choose from in their environment; but he had more freedom, more internal power to exercise his options. He became an inspiration to those around him, even to some of the guards. He helped others find meaning in their suffering and dignity in their
In the midst of the most degrading circumstances imaginable, Frankl used the human endowment of self-awareness to discover a fundamental principle about the nature of man: *Between stimulus and response, man has the freedom to choose.*

Within the freedom to choose are those endowments that make us uniquely human. In addition to *self-awareness,* we have *imagination*—the ability to create in our minds beyond our present reality. We have *conscience*—a deep inner awareness of right and wrong, of the principles that govern our behavior, and a sense of the degree to which our thoughts and actions are in harmony with them. And we have *independent will*—the ability to act based on our self-awareness, free of all other influences.

Even the most intelligent animals have none of these endowments. To use a computer metaphor, they are programmed by instinct and/or training. They can be trained to be responsible, but they can’t take responsibility for that training; in other words, they can’t direct it. They can’t change the programming. They’re not even aware of it.

But because of our unique human endowments, we can write new programs for ourselves totally apart from our instincts and training. This is why an animal’s capacity is relatively limited and man’s is unlimited. But if we live like animals, out of our own instincts and conditioning and conditions, out of our collective memory, we too will be limited.

The deterministic paradigm comes primarily from the study of animals—rats, monkeys, pigeons, dogs—and neurotic and psychotic people. While this may meet certain criteria of some researchers because it seems measurable and predictable, the history of mankind and our own self-awareness tell us that this map doesn’t describe the territory at all!

Our unique human endowments lift us above the animal world. The extent to which we exercise and develop these endowments empowers us to fulfill our uniquely human potential. Between stimulus and response is our greatest power—the freedom to choose.
“**PROACTIVITY**” **DEFINED**

In discovering the basic principle of the nature of man, Frankl described an accurate self-map from which he began to develop the first and most basic habit of a highly effective person in any environment, the habit of *proactivity*.

While the word *proactivity* is now fairly common in management literature, it is a word you won’t find in most dictionaries. It means more than merely taking initiative. It means that as human beings, we are responsible for our own lives. Our behavior is a function of our decisions, not our conditions. We can subordinate feelings to values. We have the initiative and the responsibility to make things happen.

![PROACTIVE MODEL Diagram](image)

**PROACTIVE MODEL**

Look at the word *responsibility*—“response-ability”—the ability to choose your response. Highly proactive people recognize that responsibility. They do not blame circumstances, conditions, or conditioning for their behavior. Their behavior is a product of their own conscious choice, based on values, rather than a product of their conditions, based on feeling.

Because we are, by nature, proactive, if our lives are a function of
conditioning and conditions, it is because we have, by conscious decision or by default, chosen to empower those things to control us.

In making such a choice, we become reactive. Reactive people are often affected by their physical environment. If the weather is good, they feel good. If it isn’t, it affects their attitude and their performance. Proactive people can carry their own weather with them. Whether it rains or shines makes no difference to them. They are value driven; and if their value is to produce good quality work, it isn’t a function of whether the weather is conducive to it or not.

Reactive people are also affected by their social environment, by the “social weather.” When people treat them well, they feel well; when people don’t, they become defensive or protective. Reactive people build their emotional lives around the behavior of others, empowering the weaknesses of other people to control them.

The ability to subordinate an impulse to a value is the essence of the proactive person. Reactive people are driven by feelings, by circumstances, by conditions, by their environment. Proactive people are driven by values—carefully thought about, selected and internalized values.

Proactive people are still influenced by external stimuli, whether physical, social, or psychological. But their response to the stimuli, conscious or unconscious, is a value-based choice or response.

As Eleanor Roosevelt observed, “No one can hurt you without your consent.” In the words of Gandhi, “They cannot take away our self respect if we do not give it to them.” It is our willing permission, our consent to what happens to us, that hurts us far more than what happens to us in the first place.

I admit this is very hard to accept emotionally, especially if we have had years and years of explaining our misery in the name of circumstance or someone else’s behavior. But until a person can say deeply and honestly, “I am what I am today because of the choices I made yesterday,” that person cannot say, “I choose otherwise.”

Once in Sacramento when I was speaking on the subject of proactivity, a woman in the audience stood up in the middle of my presentation and started talking excitedly. It was a large audience, and as a number of people turned to look at her, she suddenly became aware of what she was doing, grew embarrassed and sat back down. But she seemed to find it difficult to restrain herself and started talking to the people around her. She seemed so happy.

I could hardly wait for a break to find out what had happened. When it finally came, I immediately went to her and asked if she would be willing to share her
“You just can’t imagine what’s happened to me!” she exclaimed. “I’m a full-time nurse to the most miserable, ungrateful man you can possibly imagine. Nothing I do is good enough for him. He never expresses appreciation; he hardly even acknowledges me. He constantly harps at me and finds fault with everything I do. This man has made my life miserable and I often take my frustration out on my family. The other nurses feel the same way. We almost pray for his demise.

“And for you to have the gall to stand up there and suggest that nothing can hurt me, that no one can hurt me without my consent, and that I have chosen my own emotional life of being miserable—well, there was just no way I could buy into that.

“But I kept thinking about it. I really went inside myself and began to ask, ‘Do I have the power to choose my response?’

“When I finally realized that I do have that power, when I swallowed that bitter pill and realized that I had chosen to be miserable, I also realized that I could choose not to be miserable.

“At that moment I stood up. I felt as though I was being let out of San Quentin. I wanted to yell to the whole world, ‘I am free! I am let out of prison! No longer am I going to be controlled by the treatment of some person.’ ”

It’s not what happens to us, but our response to what happens to us that hurts us. Of course, things can hurt us physically or economically and can cause sorrow. But our character, our basic identity, does not have to be hurt at all. In fact, our most difficult experiences become the crucibles that forge our character and develop the internal powers, the freedom to handle difficult circumstances in the future and to inspire others to do so as well.

Frankl is one of many who have been able to develop the personal freedom in difficult circumstances to lift and inspire others. The autobiographical accounts of Vietnam prisoners of war provide additional persuasive testimony of the transforming power of such personal freedom and the effect of the responsible use of that freedom on the prison culture and on the prisoners, both then and now.

We have all known individuals in very difficult circumstances, perhaps with a terminal illness or a severe physical handicap who maintain magnificent emotional strength. How inspired we are by their integrity! Nothing has a greater, longer lasting impression upon another person than the awareness that someone has transcended suffering, has transcended circumstance, and is
embodying and expressing a value that inspires and ennobles and lifts life.

One of the most inspiring times Sandra and I have ever had took place over a four-year period with a dear friend of ours named Carol, who had a wasting cancer disease. She had been one of Sandra’s bridesmaids, and they had been best friends for over 25 years.

When Carol was in the very last stages of the disease, Sandra spent time at her bedside helping her write her personal history. She returned from those protracted and difficult sessions almost transfixed by admiration for her friend’s courage and her desire to write special messages to be given to her children at different stages in their lives.

Carol would take as little pain-killing medication as possible, so that she had full access to her mental and emotional faculties. Then she would whisper into a tape recorder or to Sandra directly as she took notes. Carol was so proactive, so brave, and so concerned about others that she became an enormous source of inspiration to many people around her.

I’ll never forget the experience of looking deeply into Carol’s eyes the day before she passed away and sensing out of that deep hollowed agony a person of tremendous intrinsic worth. I could see in her eyes a life of character, contribution, and service as well as love and concern and appreciation.

Many times over the years, I have asked groups of people how many have ever experienced being in the presence of a dying individual who had a magnificent attitude and communicated love and compassion and served in unmatchable ways to the very end. Usually, about one-fourth of the audience respond in the affirmative. I then ask how many of them will never forget these individuals—how many were transformed, at least temporarily, by the inspiration of such courage, and were deeply moved and motivated to more noble acts of service and compassion. The same people respond again, almost inevitably.

Viktor Frankl suggests that there are three central values in life—the experiential, or that which happens to us; the creative, or that which we bring into existence; and the attitudinal, or our response in difficult circumstances such as terminal illness.

My own experience with people confirms the point Frankl makes—that the highest of the three values is attitudinal, in the paradigm or reframing sense. In other words, what matters most is how we respond to what we experience in life.
Difficult circumstances often create paradigm shifts, whole new frames of reference by which people see the world and themselves and others in it, and what life is asking of them. Their larger perspective reflects the attitudinal values that lift and inspire us all.
Taking the Initiative

Our basic nature is to act, and not be acted upon. As well as enabling us to choose our response to particular circumstances, this empowers us to create circumstances.

Taking initiative does not mean being pushy, obnoxious, or aggressive. It does mean recognizing our responsibility to make things happen.

Over the years, I have frequently counseled people who wanted better jobs to show more initiative—to take interest and aptitude tests, to study the industry, even the specific problems the organizations they are interested in are facing, and then to develop an effective presentation showing how their abilities can help solve the organization’s problem. It’s called “solution selling,” and is a key paradigm in business success.

The response is usually agreement—most people can see how powerfully such an approach would affect their opportunities for employment or advancement. But many of them fail to take the necessary steps, the initiative, to make it happen.

“I don’t know where to go to take the interest and aptitude tests.”

“How do I study industry and organizational problems? No one wants to help me.”

“I don’t have any idea how to make an effective presentation.”

Many people wait for something to happen or someone to take care of them. But people who end up with the good jobs are the proactive ones who are solutions to problems, not problems themselves, who seize the initiative to do whatever is necessary, consistent with correct principles, to get the job done.

Whenever someone in our family, even one of the younger children, takes an irresponsible position and waits for someone else to make things happen or provide a solution, we tell them, “Use your R and I!” (resourcefulness and initiative). In fact, often before we can say it, they answer their own complaints, “I know—use my R and I!”

Holding people to the responsible course is not demeaning; it is affirming. Proactivity is part of human nature, and, although the proactive muscles may be dormant, they are there. By respecting the proactive nature of other people, we provide them with at least one clear, undistorted reflection from the social mirror.
Of course, the maturity level of the individual has to be taken into account. We can’t expect high creative cooperation from those who are deep into emotional dependence. But we can, at least, affirm their basic nature and create an atmosphere where people can seize opportunities and solve problems in an increasingly self-reliant way.
The difference between people who exercise initiative and those who don’t is literally the difference between night and day. I’m not talking about a 25 to 50 percent difference in effectiveness; I’m talking about a 5000-plus percent difference, particularly if they are smart, aware, and sensitive to others.

It takes initiative to create the P/PC Balance of effectiveness in your life. It takes initiative to develop the Seven Habits. As you study the other six habits, you will see that each depends on the development of your proactive muscles. Each puts the responsibility on you to act. If you wait to be acted upon, you will be acted upon. And growth and opportunity consequences attend either road.

At one time I worked with a group of people in the home improvement industry, representatives from twenty different organizations who met quarterly to share their numbers and problems in an uninhibited way.

This was during a time of heavy recession, and the negative impact on this particular industry was even heavier than on the economy in general. These people were fairly discouraged as we began.

The first day, our discussion question was “What’s happening to us? What’s the stimulus?” Many things were happening. The environmental pressures were powerful. There was widespread unemployment, and many of these people were laying off friends just to maintain the viability of their enterprises. By the end of the day, everyone was even more discouraged.

The second day, we addressed the question, “What’s going to happen in the future?” We studied environmental trends with the underlying reactive assumption that those things would create their future. By the end of the second day, we were even more depressed. Things were going to get worse before they got better, and everyone knew it.

So on the third day, we decided to focus on the proactive question, “What is our response? What are we going to do? How can we exercise initiative in this situation?” In the morning we talked about managing and reducing costs. In the afternoon we discussed increasing market share. We brainstormed both areas, then concentrated on several very practical, very doable things. A new spirit of excitement, hope, and proactive awareness concluded the meetings.
At the very end of the third day, we summarized the results of the conference in a three-part answer to the question, “How’s business?”

Part one: What’s happening to us is not good, and the trends suggest that it will get worse before it gets better.

Part two: But what we are causing to happen is very good, for we are better managing and reducing our costs and increasing our market share.

Part three: Therefore, business is better than ever.

Now what would a reactive mind say to that? “Oh, come on. Face facts. You can only carry this positive thinking and self-psych approach so far. Sooner or later you have to face reality.”

But that’s the difference between positive thinking and proactivity. We did face reality. We faced the reality of the current circumstance and of future projections. But we also faced the reality that we had the power to choose a positive response to those circumstances and projections. Not facing reality would have been to accept the idea that what’s happening in our environment had to determine us.

Businesses, community groups, organizations of every kind—including families—can be proactive. They can combine the creativity and resourcefulness of proactive individuals to create a proactive culture within the organization. The organization does not have to be at the mercy of the environment; it can take the initiative to accomplish the shared values and purposes of the individuals involved.
LISTENING TO OUR LANGUAGE

Because our attitudes and behaviors flow out of our paradigms, if we use our self-awareness to examine them, we can often see in them the nature of our underlying maps. Our language, for example, is a very real indicator of the degree to which we see ourselves as proactive people.

The language of reactive people absolves them of responsibility.

“That’s me. That’s just the way I am.” I am determined. There’s nothing I can do about it.

“He makes me so mad!” I’m not responsible. My emotional life is governed by something outside my control.

“I can’t do that. I just don’t have the time.” Something outside me—limited time—is controlling me.

“If only my wife were more patient.” Someone else’s behavior is limiting my effectiveness.

“I have to do it.” Circumstances or other people are forcing me to do what I do. I’m not free to choose my own actions.
Reactive Language
**Proactive Language**

There’s nothing I can do. Let’s look at our alternatives.  
That’s just the way I am. I can choose a different approach.  
He makes me so mad. I control my own feelings.  
They won’t allow that. I can create an effective presentation.  
I have to do that. I will choose an appropriate response.  
I can’t. I choose.  
I must. I prefer.  
If only. I will.  

That language comes from a basic paradigm of determinism. And the whole spirit of it is the transfer of responsibility. *I am not responsible, not able to choose my response.*

One time a student asked me, “Will you excuse me from class? I have to go on a tennis trip.”

“You *have* to go, or you *choose* to go?” I asked.  
“I really *have* to,” he exclaimed.  
“What will happen if you don’t?”  
“Why, they’ll kick me off the team.”  
“How would you like that consequence?”  
“I wouldn’t.”  
“In other words, you *choose* to go because you want the consequence of staying on the team. What will happen if you miss my class?”  
“I don’t know.”  
“Think hard. What do you think would be the natural consequence of not coming to class?”  
“You wouldn’t kick me out, would you?”  
“That would be a social consequence. That would be artificial. If you don’t participate on the tennis team, you don’t play. That’s natural. But if you don’t come to class, what would be the natural consequence?”  
“I guess I’ll miss the learning.”  
“That’s right. So you have to weigh that consequence against the other consequence and make a choice. I know if it were me, I’d choose to go on the tennis trip. But never say you *have* to do anything.”  
“I *choose* to go on the tennis trip,” he meekly replied.  
“And miss my class?” I replied in mock disbelief.
A serious problem with reactive language is that it becomes a self-fulfilling prophecy. People become reinforced in the paradigm that they are determined, and they produce evidence to support the belief. They feel increasingly victimized and out of control, not in charge of their life or their destiny. They blame outside forces—other people, circumstances, even the stars—for their own situation.

At one seminar where I was speaking on the concept of proactivity, a man came up and said, “Stephen, I like what you’re saying. But every situation is so different. Look at my marriage. I’m really worried. My wife and I just don’t have the same feelings for each other we used to have. I guess I just don’t love her anymore and she doesn’t love me. What can I do?”

“The feeling isn’t there anymore?” I asked.

“That’s right,” he reaffirmed. “And we have three children we’re really concerned about. What do you suggest?”

“Love her,” I replied.

“I told you, the feeling just isn’t there anymore.”

“Love her.”

“You don’t understand. The feeling of love just isn’t there.”

“Then love her. If the feeling isn’t there, that’s a good reason to love her.”

“But how do you love when you don’t love?”

“My friend, love is a verb. Love—the feeling—is a fruit of love, the verb. So love her. Serve her. Sacrifice. Listen to her. Empathize. Appreciate. Affirm her. Are you willing to do that?”

In the great literature of all progressive societies, love is a verb. Reactive people make it a feeling. They’re driven by feelings. Hollywood has generally scripted us to believe that we are not responsible, that we are a product of our feelings. But the Hollywood script does not describe the reality. If our feelings control our actions, it is because we have abdicated our responsibility and empowered them to do so.

Proactive people make love a verb. Love is something you do: the sacrifices you make, the giving of self, like a mother bringing a newborn into the world. If you want to study love, study those who sacrifice for others, even for people who offend or do not love in return. If you are a parent, look at the love you have for the children you sacrificed for. Love is a value that is actualized through loving actions. Proactive people subordinate feelings to values. Love, the
feeling, can be recaptured.
No Concern
Another excellent way to become more self-aware regarding our own degree of proactivity is to look at where we focus our time and energy. We each have a wide range of concerns—our health, our children, problems at work, the national debt, nuclear war. We could separate those from things in which we have no particular mental or emotional involvement by creating a “Circle of Concern.”
PROACTIVE FOCUS
(Positive energy enlarges the Circle of Influence)

As we look at those things within our Circle of Concern, it becomes apparent that there are some things over which we have no real control and others that we can do something about. We could identify those concerns in the latter group by circumscribing them within a smaller Circle of Influence.

By determining which of these two circles is the focus of most of our time and energy, we can discover much about the degree of our proactivity.
**REACTIVE FOCUS**  
*(Negative energy reduces the Circle of Influence)*

Proactive people focus their efforts in the Circle of Influence. They work on the things they can do something about. The nature of their energy is positive, enlarging and magnifying, causing their Circle of Influence to increase.

Reactive people, on the other hand, focus their efforts in the Circle of Concern. They focus on the weakness of other people, the problems in the environment, and circumstances over which they have no control. Their focus results in blaming and accusing attitudes, reactive language, and increased feelings of victimization. The negative energy generated by that focus, combined with neglect in areas they could do something about, causes their Circle of Influence to shrink.

As long as we are working in our Circle of Concern, we empower the things within it to control us. We aren’t taking the proactive initiative necessary to effect positive change.

Earlier, I shared with you the story of my son who was having serious problems in school. Sandra and I were deeply concerned about his apparent weaknesses and about the way other people were treating him.

But those things were in our Circle of Concern. As long as we focused our efforts on those things, we accomplished nothing, except to increase our own feelings of inadequacy and helplessness and to reinforce our son’s dependence.

It was only when we went to work in our Circle of Influence, when we
focused on our own paradigms, that we began to create a positive energy that changed ourselves and eventually influenced our son as well. By working on ourselves instead of worrying about conditions, we were able to influence the conditions.

Because of position, wealth, role, or relationships, there are some circumstances in which a person’s Circle of Influence is larger than his or her Circle of Concern.

This situation reflects a self-inflicted emotional myopia—another reactive selfish life-style focused in the Circle of Concern.

Though they may have to prioritize the use of their influence, proactive people have a Circle of Concern that is at least as big as their Circle of Influence, accepting the responsibility to use their influence effectively.
Direct, Indirect, and No Control

The problems we face fall in one of three areas: direct control (problems involving our own behavior); indirect control (problems involving other people’s behavior); or no control (problems we can do nothing about, such as our past or situational realities). The proactive approach puts the first step in the solution of all three kinds of problems within our present Circle of Influence.

Direct control problems are solved by working on our habits. They are obviously within our Circle of Influence. These are the “Private Victories” of Habits 1, 2, and 3.

Indirect control problems are solved by changing our methods of influence. These are the “Public Victories” of Habits 4, 5, and 6. I have personally identified over 30 separate methods of human influence—as separate as empathy is from confrontation, as separate as example is from persuasion. Most people have only three or four of these methods in their repertoire, starting usually with reasoning, and, if that doesn’t work, moving to flight or fight. How liberating it is to accept the idea that I can learn new methods of human influence instead of constantly trying to use old ineffective methods to “shape up” someone else!

No control problems involve taking the responsibility to change the line on the bottom on our face—to smile, to genuinely and peacefully accept these problems and learn to live with them, even though we don’t like them. In this way, we do not empower these problems to control us. We share in the spirit embodied in the Alcoholics Anonymous prayer, “Lord, give me the courage to change the things which can and ought to be changed, the serenity to accept the things which cannot be changed, and the wisdom to know the difference.”

Whether a problem is direct, indirect, or no control, we have in our hands the first step to the solution. Changing our habits, changing our methods of influence and changing the way we see our no control problems are all within our Circle of Influence.
EXPANDING THE CIRCLE OF INFLUENCE

It is inspiring to realize that in choosing our response to circumstance, we powerfully affect our circumstance. When we change one part of the chemical formula, we change the nature of the results.

I worked with one organization for several years that was headed by a very dynamic person. He could read trends. He was creative, talented, capable, and brilliant—and everyone knew it. But he had a very dictatorial style of management. He tended to treat people like “gofers,” as if they didn’t have any judgment. His manner of speaking to those who worked in the organization was, “Go for this … go for that… now do this … now do that—I’ll make the decisions.”

The net effect was that he alienated almost the entire executive team surrounding him. They would gather in the corridors and complain to each other about him. Their discussion was all very sophisticated, very articulate, as if they were trying to help the situation. But they did it endlessly, absolving themselves of responsibility in the name of the president’s weaknesses.

“You can’t imagine what’s happened this time,” someone would say. “The other day he went into my department. I had everything all laid out. But he came in and gave totally different signals. Everything I’d done for months was shot, just like that. I don’t know how I’m supposed to keep working for him. How long will it be until he retires?”

“He’s only fifty-nine,” someone else would respond. “Do you think you can survive for six more years?”

“I don’t know. He’s the kind of person they probably won’t retire anyway.”

But one of the executives was proactive. He was driven by values, not feelings. He took the initiative—he anticipated, he empathized, he read the situation. He was not blind to the president’s weaknesses; but instead of criticizing them, he would compensate for them. Where the president was weak in his style, he’d try to buffer his own people and make such weaknesses irrelevant. And he’d work with the president’s strengths—his vision, talent, creativity.

This man focused on his Circle of Influence. He was treated like a gofer, also.
But he would do more than what was expected. He anticipated the president’s need. He read with empathy the president’s underlying concern, so when he presented information, he also gave his analysis and his recommendations based on that analysis.

As I sat one day with the president in an advisory capacity, he said, “Stephen, I just can’t believe what this man has done. He’s not only given me the information I requested, but he’s provided additional information that’s exactly what we needed. He even gave me his analysis of it in terms of my deepest concerns, and a list of his recommendations.

“The recommendations are consistent with the analysis, and the analysis is consistent with the data. He’s remarkable! What a relief not to have to worry about this part of the business.”

At the next meeting, it was “go for this” and “go for that” to all the executives … but one. To this man, it was “What’s your opinion?” His Circle of Influence had grown.

This caused quite a stir in the organization. The reactive minds in the executive corridors began shooting their vindictive ammunition at this proactive man.

It’s the nature of reactive people to absolve themselves of responsibility. It’s so much safer to say, “I am not responsible.” If I say “I am responsible,” I might have to say, “I am irresponsible.” It would be very hard for me to say that I have the power to choose my response and that the response I have chosen has resulted in my involvement in a negative, collusive environment, especially if for years I have absolved myself of responsibility for results in the name of someone else’s weaknesses.

So these executives focused on finding more information, more ammunition, more evidence as to why they weren’t responsible.

But this man was proactive toward them, too. Little by little, his Circle of Influence toward them grew also. It continued to expand to the extent that eventually no one made any significant moves in the organization without that man’s involvement and approval, including the president. But the president did not feel threatened because this man’s strength complemented his strength and compensated for his weaknesses. So he had the strength of two people, a complementary team.

This man’s success was not dependent on his circumstances. Many others were in the same situation. It was his chosen response to those circumstances, his focus on his Circle of Influence, that made the difference.
There are some people who interpret “proactive” to mean pushy, aggressive, or insensitive; but that isn’t the case at all. Proactive people aren’t pushy. They’re smart, they’re value driven, they read reality, and they know what’s needed.

Look at Gandhi. While his accusers were in the legislative chambers criticizing him because he wouldn’t join in their Circle of Concern Rhetoric condemning the British Empire for their subjugation of the Indian people, Gandhi was out in the rice paddies, quietly, slowly, imperceptibly expanding his Circle of Influence with the field laborers. A ground swell of support, of trust, of confidence followed him through the countryside. Though he held no office or political position, through compassion, courage, fasting, and moral persuasion he eventually brought England to its knees, breaking political domination of three hundred million people with the power of his greatly expanded Circle of Influence.
THE “HAVE’S” AND THE “BE’S”

One way to determine which circle our concern is in is to distinguish between the have’s and the be’s. The Circle of Concern is filled with the have’s:
“I’ll be happy when I have my house paid off.”
“If only I had a boss who wasn’t such a dictator….”
“If only I had a more patient husband….”
“If I had more obedient kids….”
“If I had my degree….”
“If I could just have more time to myself….”
The Circle of Influence is filled with the be’s—I can be more patient, be wise, be loving. It’s the character focus.

Anytime we think the problem is “out there,” that thought is the problem. We empower what’s out there to control us. The change paradigm is “outside-in”—what’s out there has to change before we can change.

The proactive approach is to change from the inside-out: to be different, and by being different, to effect positive change in what’s out there—I can be more resourceful, I can be more diligent, I can be more creative, I can be more cooperative.

One of my favorite stories is one in the Old Testament, part of the fundamental fabric of the Judeo-Christian tradition. It’s the story of Joseph, who was sold into slavery in Egypt by his brothers at the age of seventeen. Can you imagine how easy it would have been for him to languish in self-pity as a servant of Potiphar, to focus on the weaknesses of his brothers and his captors and on all he didn’t have? But Joseph was proactive. He worked on be. And within a short period of time, he was running Potiphar’s household. He was in charge of all that Potiphar had because the trust was so high.

Then the day came when Joseph was caught in a difficult situation and refused to compromise his integrity. As a result, he was unjustly imprisoned for thirteen years. But again he was proactive. He worked on the inner circle, on being instead of having, and soon he was running the prison and eventually the entire nation of Egypt, second only to the Pharaoh.

I know this idea is a dramatic paradigm shift for many people. It is so much easier to blame other people, conditioning, or conditions for our own stagnant situation. But we are responsible—“responseable”—to control our lives and to
powerfully influence our circumstances by working on *be*, on what we are.

If I have a problem in my marriage, what do I really gain by continually confessing my wife’s sins? By saying I’m not responsible, I make myself a powerless victim; I immobilize myself in a negative situation. I also diminish my ability to influence her—my nagging, accusing, critical attitude only makes her feel validated in her own weakness. My criticism is worse than the conduct I want to correct. My ability to positively impact the situation withers and dies.

If I really want to improve my situation, I can work on the one thing over which I have control—myself. I can stop trying to shape up my wife and work on my own weaknesses. I can focus on being a great marriage partner, a source of unconditional love and support. Hopefully, my wife will feel the power of proactive example and respond in kind. But whether she does or doesn’t, the most positive way I can influence my situation is to work on myself, on my *being*.

There are so many ways to work in the Circle of Influence—to *be* a better listener, to *be* a more loving marriage partner, to *be* a better student, to *be* a more cooperative and dedicated employee. Sometimes the most proactive thing we can do is to *be* happy, just to genuinely smile. Happiness, like unhappiness, is a proactive choice. There are things, like the weather, that our Circle of Influence will never include. But as proactive people, we can carry our own physical or social weather with us. We can be happy and accept those things that at present we can’t control, while we focus our efforts on the things that we can.
Before we totally shift our life focus to our Circle of Influence, we need to consider two things in our Circle of Concern that merit deeper thought—consequences and mistakes.

While we are free to choose our actions, we are not free to choose the consequences of those actions. Consequences are governed by natural law. They are out in the Circle of Concern. We can decide to step in front of a fast-moving train, but we cannot decide what will happen when the train hits us.

We can decide to be dishonest in our business dealings. While the social consequences of that decision may vary depending on whether or not we are found out, the natural consequences to our basic character are a fixed result.

Our behavior is governed by principles. Living in harmony with them brings positive consequences; violating them brings negative consequences. We are free to choose our response in any situation, but in doing so, we choose the attendant consequence. “When we pick up one end of the stick, we pick up the other.”

Undoubtedly, there have been times in each of our lives when we have picked up what we later felt was the wrong stick. Our choices have brought consequences we would rather have lived without. If we had the choice to make over again, we would make it differently. We call these choices mistakes, and they are the second thing that merits our deeper thought.

For those filled with regret, perhaps the most needful exercise of proactivity is to realize that past mistakes are also out there in the Circle of Concern. We can’t recall them, we can’t undo them, we can’t control the consequences that came as a result.

As a college quarterback, one of my sons learned to snap his wristband between plays as a kind of mental checkoff whenever he or anyone made a “setting back” mistake, so the last mistake wouldn’t affect the resolve and execution of the next play.

The proactive approach to a mistake is to acknowledge it instantly, correct and learn from it. This literally turns a failure into a success. “Success,” said IBM founder T. J. Watson, “is on the far side of failure.”

But not to acknowledge a mistake, not to correct it and learn from it, is a mistake of a different order. It usually puts a person on a self-deceiving, self-justifying path, often involving rationalization (rational lies) to self and to others.
This second mistake, this cover-up, empowers the first, giving it disproportionate importance, and causes far deeper injury to self.

It is not what others do or even our own mistakes that hurt us the most; it is our response to those things. Chasing after the poisonous snake that bites us will only drive the poison through our entire system. It is far better to take measures immediately to get the poison out.

Our response to any mistake affects the quality of the next moment. It is important to immediately admit and correct our mistakes so that they have no power over that next moment and we are empowered again.
Making and Keeping Commitments

At the very heart of our Circle of Influence is our ability to make and keep commitments and promises. The commitments we make to ourselves and to others, and our integrity to those commitments, is the essence and clearest manifestation of our proactivity.

It is also the essence of our growth. Through our human endowments of self-awareness and conscience, we become conscious of areas of weakness, areas for improvement, areas of talent that could be developed, areas that need to be changed or eliminated from our lives. Then, as we recognize and use our imagination and independent will to act on that awareness—making promises, setting goals, and being true to them—we build the strength of character, the being, that makes possible every other positive thing in our lives.

It is here that we find two ways to put ourselves in control of our lives immediately. We can make a promise—and keep it. Or we can set a goal—and work to achieve it. As we make and keep commitments, even small commitments, we begin to establish an inner integrity that gives us the awareness of self-control and the courage and strength to accept more of the responsibility for our own lives. By making and keeping promises to ourselves and others, little by little, our honor becomes greater than our moods.

The power to make and keep commitments to ourselves is the essence of developing the basic habits of effectiveness. Knowledge, skill, and desire are all within our control. We can work on any one to improve the balance of the three. As the area of intersection becomes larger, we more deeply internalize the principles upon which the habits are based and create the strength of character to move us in a balanced way toward increasing effectiveness in our lives.
**Proactivity: The Thirty-Day Test**

We don’t have to go through the death camp experience of Frankl to recognize and develop our own proactivity. It is in the ordinary events of every day that we develop the proactive capacity to handle the extraordinary pressures of life. It’s how we make and keep commitments, how we handle a traffic jam, how we respond to an irate customer or a disobedient child. It’s how we view our problems and where we focus our energies. It’s the language we use.

I would challenge you to test the principle of proactivity for thirty days. Simply try it and see what happens. For thirty days work only in your Circle of Influence. Make small commitments and keep them. Be a light, not a judge. Be a model, not a critic. Be part of the solution, not part of the problem.

Try it in your marriage, in your family, in your job. Don’t argue for other people’s weaknesses. Don’t argue for your own. When you make a mistake, admit it, correct it, and learn from it—immediately. Don’t get into a blaming, accusing mode. Work on things you have control over. Work on you. On be.

Look at the weaknesses of others with compassion, not accusation. It’s not what they’re not doing or should be doing that’s the issue. The issue is your own chosen response to the situation and what you should be doing. If you start to think the problem is “out there,” stop yourself. That thought is the problem.

People who exercise their embryonic freedom day after day will, little by little, expand that freedom. People who do not will find that it withers until they are literally “being lived.” They are acting out the scripts written by parents, associates, and society.

We are responsible for our own effectiveness, for our own happiness, and ultimately, I would say, for most of our circumstances.

Samuel Johnson observed: “The fountain of content must spring up in the mind, and he who hath so little knowledge of human nature as to seek happiness by changing anything but his own disposition, will waste his life in fruitless efforts and multiply the grief he proposes to remove.”

Knowing that we are responsible—“response-able”—is fundamental to effectiveness and to every other habit of effectiveness we will discuss.
APPLICATION SUGGESTIONS

1. For a full day, listen to your language and to the language of the people around you. How often do you use and hear reactive phrases such as “If only,” “I can’t,” or “I have to”?

2. Identify an experience you might encounter in the near future where, based on past experience, you would probably behave reactively. Review the situation in the context of your Circle of Influence. How could you respond proactively? Take several moments and create the experience vividly in your mind, picturing yourself responding in a proactive manner. Remind yourself of the gap between stimulus and response. Make a commitment to yourself to exercise your freedom to choose.

3. Select a problem from your work or personal life that is frustrating to you. Determine whether it is a direct, indirect, or no control problem. Identify the first step you can take in your Circle of Influence to solve it and then take that step.

4. Try the thirty-day test of proactivity. Be aware of the change in your Circle of Influence.
Habit 2
Begin with the End in Mind
PRINCIPLES OF PERSONAL LEADERSHIP

What lies behind us and what lies before us are tiny matters compared to what lies within us.

OLIVER WENDELL HOLMES

PLEASE FIND A PLACE TO READ THESE NEXT FEW PAGES where you can be alone and uninterrupted. Clear your mind of everything except what you will read and what I will invite you to do. Don’t worry about your schedule, your business, your family, or your friends. Just focus with me and really open your mind.

In your mind’s eye, see yourself going to the funeral of a loved one. Picture yourself driving to the funeral parlor or chapel, parking the car, and getting out. As you walk inside the building, you notice the flowers, the soft organ music. You see the faces of friends and family you pass along the way. You feel the shared sorrow of losing, the joy of having known, that radiates from the hearts of the people there.

As you walk down to the front of the room and look inside the casket, you suddenly come face to face with yourself. This is your funeral, three years from today. All these people have come to honor you, to express feelings of love and appreciation for your life.
As you take a seat and wait for the services to begin, you look at the program in your hand. There are to be four speakers. The first is from your family, immediate and also extended—children, brothers, sisters, nephews, nieces, aunts, uncles, cousins, and grandparents who have come from all over the country to attend. The second speaker is one of your friends, someone who can give a sense of what you were as a person. The third speaker is from your work or profession. And the fourth is from your church or some community organization where you’ve been involved in service.

Now think deeply. What would you like each of these speakers to say about you and your life? What kind of husband, wife, father, or mother would you like their words to reflect? What kind of son or daughter or cousin? What kind of friend? What kind of working associate?

What character would you like them to have seen in you? What contributions, what achievements would you want them to remember? Look carefully at the people around you. What difference would you like to have made in their lives?

Before you read further, take a few minutes to jot down your impressions. It will greatly increase your personal understanding of Habit 2.
What It Means to “Begin with the End in Mind”

If you participated seriously in this visualization experience, you touched for a moment some of your deep, fundamental values. You established brief contact with that inner guidance system at the heart of your Circle of Influence.

Consider the words of Joseph Addison:

When I look upon the tombs of the great, every emotion of envy dies in me; when I read the epitaphs of the beautiful, every inordinate desire goes out; when I meet with the grief of parents upon a tombstone, my heart melts with compassion; when I see the tomb of the parents themselves, I consider the vanity of grieving or those whom we must quickly follow: when I see kings lying by those who deposed them, when I consider rival wits placed side by side, or the holy men that divided the world with their contests and disputes, I reflect with sorrow and astonishment on the little competitions, factions, and debates of mankind. When I read the several dates of the tombs, of some that died yesterday, and some six hundred years ago, I consider that great Day when we shall all of us be Contemporaries, and make our appearance together.

Although Habit 2 applies to many different circumstances and levels of life, the most fundamental application of “begin with the end in mind” is to begin today with the image, picture, or paradigm of the end of your life as your frame of reference or the criterion by which everything else is examined. Each part of your life—today’s behavior, tomorrow’s behavior, next week’s behavior, next month’s behavior—can be examined in the context of the whole, of what really matters most to you. By keeping that end clearly in mind, you can make certain that whatever you do on any particular day does not violate the criteria you have defined as supremely important, and that each day of your life contributes in a meaningful way to the vision you have of your life as a whole.

To begin with the end in mind means to start with a clear understanding of your destination. It means to know where you’re going so that you better understand where you are now and so that the steps you take are always in the right direction.
It’s incredibly easy to get caught up in an activity trap, in the busy-ness of life, to work harder and harder at climbing the ladder of success only to discover it’s leaning against the wrong wall. It is possible to be busy—very busy—without being very effective.

People often find themselves achieving victories that are empty, successes that have come at the expense of things they suddenly realize were far more valuable to them. People from every walk of life—doctors, academicians, actors, politicians, business professionals, athletes, and plumbers—often struggle to achieve a higher income, more recognition or a certain degree of professional competence, only to find that their drive to achieve their goal blinded them to the things that really mattered most and now are gone.

How different our lives are when we really know what is deeply important to us, and, keeping that picture in mind, we manage ourselves each day to be and to do what really matters most. If the ladder is not leaning against the right wall, every step we take just gets us to the wrong place faster. We may be very busy, we may be very efficient, but we will also be truly effective only when we begin with the end in mind.

If you carefully consider what you wanted to be said of you in the funeral experience, you will find your definition of success. It may be very different from the definition you thought you had in mind. Perhaps fame, achievement, money, or some of the other things we strive for are not even part of the right wall.

When you begin with the end in mind, you gain a different perspective. One man asked another on the death of a mutual friend, “How much did he leave?” His friend responded, “He left it all.”
ALL THINGS ARE CREATED TWICE

“Begin with the end in mind” is based on the principle that all things are created twice. There’s a mental or first creation, and a physical or second creation to all things.

Take the construction of a home, for example. You create it in every detail before you ever hammer the first nail into place. You try to get a very clear sense of what kind of house you want. If you want a family-centered home, you plan to put a family room where it would be a natural gathering place. You plan sliding doors and a patio for children to play outside. You work with ideas. You work with your mind until you get a clear image of what you want to build.

Then you reduce it to blueprint and develop construction plans. All of this is done before the earth is touched. If not, then in the second creation, the physical creation, you will have to make expensive changes that may double the cost of your home.

The carpenter’s rule is “measure twice, cut once.” You have to make sure that the blueprint, the first creation, is really what you want, that you’ve thought everything through. Then you put it into bricks and mortar. Each day you go to the construction shed and pull out the blueprint to get marching orders for the day. You begin with the end in mind.

For another example, look at a business. If you want to have a successful enterprise, you clearly define what you’re trying to accomplish. You carefully think through the product or service you want to provide in terms of your market target, then you organize all the elements—financial, research and development, operations, marketing, personnel, physical facilities, and so on—to meet that objective. The extent to which you begin with the end in mind often determines whether or not you are able to create a successful enterprise. Most business failures begin in the first creation, with problems such as undercapitalization, misunderstanding of the market, or lack of a business plan.

The same is true with parenting. If you want to raise responsible, self-disciplined children, you have to keep that end clearly in mind as you interact with your children on a daily basis. You can’t behave toward them in ways that undermine their self-discipline or self-esteem.

To varying degrees, people use this principle in many different areas of life. Before you go on a trip, you determine your destination and plan out the best
route. Before you plant a garden, you plan it out in your mind, possibly on paper. You create speeches on paper before you give them, you envision the landscaping in your yard before you landscape it, you design the clothes you make before you thread the needle.

To the extent to which we understand the principle of two creations and accept the responsibility for both, we act within and enlarge the borders of our Circle of Influence. To the extent to which we do not operate in harmony with this principle and take charge of the first creation, we diminish it.
BY DESIGN OR DEFAULT

It’s a principle that all things are created twice, but not all first creations are by conscious design. In our personal lives, if we do not develop our own self-awareness and become responsible for first creations, we empower other people and circumstances outside our Circle of Influence to shape much of our lives by default. We reactively live the scripts handed to us by family, associates, other people’s agendas, the pressures of circumstance—scripts from our earlier years, from our training, our conditioning.

These scripts come from people, not principles. And they rise out of our deep vulnerabilities, our deep dependency on others and our needs for acceptance and love, for belonging, for a sense of importance and worth, for a feeling that we matter.

Whether we are aware of it or not, whether we are in control of it or not, there is a first creation to every part of our lives. We are either the second creation of our own proactive design, or we are the second creation of other people’s agendas, of circumstances, or of past habits.

The unique human capacities of self-awareness, imagination, and conscience enable us to examine first creations and make it possible for us to take charge of our own first creation, to write our own script. Put another way, Habit 1 says, “You are the creator.” Habit 2 is the first creation.
LEADERSHIP AND MANAGEMENT—THE TWO CREATIONS

Habit 2 is based on principles of personal leadership, which means that leadership is the first creation. Leadership is not management. Management is the second creation, which we’ll discuss in the chapter on Habit 3. But leadership has to come first.

Management is a bottom line focus: How can I best accomplish certain things? Leadership deals with the top line: What are the things I want to accomplish? In the words of both Peter Drucker and Warren Bennis, “Management is doing things right; leadership is doing the right things.” Management is efficiency in climbing the ladder of success; leadership determines whether the ladder is leaning against the right wall.

You can quickly grasp the important difference between the two if you envision a group of producers cutting their way through the jungle with machetes. They’re the producers, the problem solvers. They’re cutting through the undergrowth, clearing it out.

The managers are behind them, sharpening their machetes, writing policy and procedure manuals, holding muscle development programs, bringing in improved technologies and setting up working schedules and compensation programs for machete wielders.

The leader is the one who climbs the tallest tree, surveys the entire situation, and yells, “Wrong jungle!”

But how do the busy, efficient producers and managers often respond? “Shut up! We’re making progress.”

As individuals, groups, and businesses, we’re often so busy cutting through the undergrowth we don’t even realize we’re in the wrong jungle. And the rapidly changing environment in which we live makes effective leadership more critical than it has ever been—in every aspect of independent and interdependent life.

We are more in need of a vision or destination and a compass (a set of principles or directions) and less in need of a road map. We often don’t know what the terrain ahead will be like or what we will need to go through it; much will depend on our judgment at the time. But an inner compass will always give us direction.

Effectiveness—often even survival—does not depend solely on how much
effort we expend, but on whether or not the effort we expend is in the right jungle. And the metamorphosis taking place in most every industry and profession demands leadership first and management second.

In business, the market is changing so rapidly that many products and services that successfully met consumer tastes and needs a few years ago are obsolete today. Proactive powerful leadership must constantly monitor environmental change, particularly customer buying habits and motives, and provide the force necessary to organize resources in the right direction.

Such changes as deregulation of the airline industry, skyrocketing costs of health care, and the greater quality and quantity of imported cars impact the environment in significant ways. If industries do not monitor the environment, including their own work teams, and exercise the creative leadership to keep headed in the right direction, no amount of management expertise can keep them from failing.

Efficient management without effective leadership is, as one individual has phrased it, “like straightening deck chairs on the Titanic.” No management success can compensate for failure in leadership. But leadership is hard because we’re often caught in a management paradigm.

At the final session of a year-long executive development program in Seattle, the president of an oil company came up to me and said, “Stephen, when you pointed out the difference between leadership and management in the second month, I looked at my role as the president of this company and realized that I had never been into leadership. I was deep into management, buried by pressing challenges and the details of day-to-day logistics. So I decided to withdraw from management. I could get other people to do that. I wanted to really lead my organization.

“It was hard. I went through withdrawal pains because I stopped dealing with a lot of the pressing, urgent matters that were right in front of me and which gave me a sense of immediate accomplishment. I didn’t receive much satisfaction as I started wrestling with the direction issues, the culture building issues, the deep analysis of problems, the seizing of new opportunities. Others also went through withdrawal pains from their working style comfort zones. They missed the easy accessibility I had given them before. They still wanted me to be available to them, to respond, to help solve their problems on a day-to-day basis.

“But I persisted. I was absolutely convinced that I needed to provide leadership. And I did. Today our whole business is different. We’re more in line with our environment. We have doubled our revenues and quadrupled our
profits. I’m into leadership.”

I’m convinced that too often parents are also trapped in the management paradigm, thinking of control, efficiency, and rules instead of direction, purpose, and family feeling.

And leadership is even more lacking in our personal lives. We’re into managing with efficiency, setting and achieving goals before we have even clarified our values.
Rescripting: Becoming Your Own First Creator

As we previously observed, proactivity is based on the unique human endowment of self-awareness. The two additional unique human endowments that enable us to expand our proactivity and to exercise personal leadership in our lives are imagination and conscience.

Through imagination, we can visualize the uncreated worlds of potential that lie within us. Through conscience, we can come in contact with, universal laws or principles with our own singular talents and avenues of contribution, and with the personal guidelines within which we can most effectively develop them. Combined with self-awareness, these two endowments empower us to write our own script.

Because we already live with many scripts that have been handed to us, the process of writing our own script is actually more a process of “rescripting,” or paradigm shifting—of changing some of the basic paradigms that we already have. As we recognize the ineffective scripts, the incorrect or incomplete paradigms within us, we can proactively begin to rescript ourselves.

I think one of the most inspiring accounts of the rescripting process comes from the autobiography of Anwar Sadat, past president of Egypt. Sadat had been reared, nurtured, and deeply scripted in a hatred for Israel. He would make the statement on national television, “I will never shake the hand of an Israeli as long as they occupy one inch of Arab soil. Never, never, never!” And huge crowds all around the country would chant, “Never, never, never!” He marshalled the energy and unified the will of the whole country in that script.

The script was very independent and nationalistic, and it aroused deep emotions in the people. But it was also very foolish, and Sadat knew it. It ignored the perilous, highly interdependent reality of the situation.

So he rescripted himself. It was a process he had learned when he was a young man imprisoned in Cell 54, a solitary cell in Cairo Central Prison, as a result of his involvement in a conspiracy plot against King Farouk. He learned to withdraw from his own mind and look at it to see if the scripts were appropriate and wise. He learned how to vacate his own mind and, through a deep personal process of meditation, to work with his own scriptures, his own form of prayer,
and rescript himself.

He records that he was almost loathe to leave his prison cell because it was there that he realized that real success is success with self. It’s not in having things, but in having mastery, having victory over self.

For a period of time during Nasser’s administration Sadat was relegated to a position of relative insignificance. Everyone felt that his spirit was broken, but it wasn’t. They were projecting their own home movies onto him. They didn’t understand him. He was biding his time.

And when that time came, when he became president of Egypt and confronted the political realities, he rescripted himself toward Israel. He visited the Knesset in Jerusalem and opened up one of the most precedent-breaking peace movements in the history of the world, a bold initiative that eventually brought about the Camp David Accord.

Sadat was able to use his self-awareness, his imagination and his conscience to exercise personal leadership, to change an essential paradigm, to change the way he saw the situation. He worked in the center of his Circle of Influence. And from that rescripting, that change in paradigm, flowed changes in behavior and attitude that affected millions of lives in the wider Circle of Concern.

In developing our own self-awareness many of us discover ineffective scripts, deeply embedded habits that are totally unworthy of us, totally incongruent with the things we really value in life. Habit 2 says we don’t have to live with those scripts. We are response-able to use our imagination and creativity to write new ones that are more effective, more congruent with our deepest values and with the correct principles that give our values meaning.

Suppose, for example, that I am highly overreactive to my children. Suppose that whenever they begin to do something I feel is inappropriate, I sense an immediate tensing in the pit of my stomach. I feel defensive walls go up; I prepare for battle. My focus is not on the long-term growth and understanding but on the short-term behavior. I’m trying to win the battle, not the war.

I pull out my ammunition—my superior size, my position of authority—and I yell or intimidate or I threaten or punish. And I win. I stand there, victorious, in the middle of the debris of a shattered relationship while my children are outwardly submissive and inwardly rebellious, suppressing feelings that will come out later in uglier ways.

Now if I were sitting at that funeral we visualized earlier, and one of my children was about to speak, I would want his life to represent the victory of teaching, training, and disciplining with love over a period of years rather than
the battle scars of quick fix skirmishes. I would want his heart and mind to be filled with the pleasant memories of deep, meaningful times together. I would want him to remember me as a loving father who shared the fun and the pain of growing up. I would want him to remember the times he came to me with his problems and concerns. I would want to have listened and loved and helped. I would want him to know I wasn’t perfect, but that I had tried with everything I had. And that, perhaps more than anybody in the world, I loved him.

The reason I would want those things is because, deep down, I value my children. I love them, I want to help them. I value my role as their father.

But I don’t always see those values. I get caught up in the “thick of thin things.” What matters most gets buried under layers of pressing problems, immediate concerns, and outward behaviors. I become reactive. And the way I interact with my children every day often bears little resemblance to the way I deeply feel about them.

Because I am self-aware, because I have imagination and conscience, I can examine my deepest values. I can realize that the script I’m living is not in harmony with those values, that my life is not the product of my own proactive design, but the result of the first creation I have deferred to circumstances and other people. And I can change. I can live out of my imagination instead of my memory. I can tie myself to my limitless potential instead of my limiting past. I can become my own first creator.

To begin with the end in mind means to approach my role as a parent, as well as my other roles in life, with my values and directions clear. It means to be responsible for my own first creation, to rescript myself so that the paradigms from which my behavior and attitude flow are congruent with my deepest values and in harmony with correct principles.

It also means to begin each day with those values firmly in mind. Then as the vicissitudes, as the challenges come, I can make my decisions based on those values. I can act with integrity. I don’t have to react to the emotion, the circumstance. I can be truly proactive, value driven, because my values are clear.
A PERSONAL MISSION STATEMENT

The most effective way I know to begin with the end in mind is to develop a personal mission statement or philosophy or creed. It focuses on what you want to be (character) and to do (contributions and achievements) and on the values or principles upon which being and doing are based.

Because each individual is unique, a personal mission statement will reflect that uniqueness, both in content and form. My friend, Rolfe Kerr, has expressed his personal creed in this way:

Succeed at home first.
Seek and merit divine help.
Never compromise with honesty.
Remember the people involved.
Hear both sides before judging.
Obtain counsel of others.
Defend those who are absent.
Be sincere yet decisive.
Develop one new proficiency a year.
Plan tomorrow’s work today.
Hustle while you wait.
Maintain a positive attitude.
Keep a sense of humor.
Be orderly in person and in work.
Do not fear mistakes—fear only the absence of creative, constructive, and corrective responses to those mistakes.
Facilitate the success of subordinates.
Listen twice as much as you speak.
Concentrate all abilities and efforts on the task at hand, not worrying about the next job or promotion.

A woman seeking to balance family and work values has expressed her sense of personal mission differently:

I will seek to balance career and family as best I can since both are
important to me.

My home will be a place where I and my family, friends, and guests find joy, comfort, peace, and happiness. Still I will seek to create a clean and orderly environment, yet livable and comfortable. I will exercise wisdom in what we choose to eat, read, see, and do at home. I especially want to teach my children to love, to learn, and to laugh—and to work and develop their unique talents.

I value the rights, freedoms, and responsibilities of our democratic society. I will be a concerned and informed citizen, involved in the political process to ensure my voice is heard and my vote is counted.

I will be a self-starting individual who exercises initiative in accomplishing my life’s goals. I will act on situations and opportunities, rather than to be acted upon.

I will always try to keep myself free from addictive and destructive habits. I will develop habits that free me from old labels and limits and expand my capabilities and choices.

My money will be my servant, not my master. I will seek financial independence over time. My wants will be subject to my needs and my means. Except for long-term home and car loans, I will seek to keep myself free from consumer debt. I will spend less than I earn and regularly save or invest part of my income.

Moreover, I will use what money and talents I have to make life more enjoyable for others through service and charitable giving.

You could call a personal mission statement a personal constitution. Like the United States Constitution, it’s fundamentally changeless. In over two hundred years, there have been only twenty-six amendments, ten of which were in the original Bill of Rights.

The United States Constitution is the standard by which every law in the country is evaluated. It is the document the president agrees to defend and support when he takes the Oath of Allegiance. It is the criterion by which people are admitted into citizenship. It is the foundation and the center that enables people to ride through such major traumas as the Civil War, Vietnam, or Watergate. It is the written standard, the key criterion by which everything else is evaluated and directed.

The Constitution has endured and serves its vital function today because it is based on correct principles, on the self-evident truths contained in the Declaration of Independence. These principles empower the Constitution with a timeless strength, even in the midst of social ambiguity and change. “Our
peculiar security,” said Thomas Jefferson, “is in the possession of a written Constitution.”

A personal mission statement based on correct principles becomes the same kind of standard for an individual. It becomes a personal constitution, the basis for making major, life-directing decisions, the basis for making daily decisions in the midst of the circumstances and emotions that affect our lives. It empowers individuals with the same timeless strength in the midst of change.

People can’t live with change if there’s not a changeless core inside them. The key to the ability to change is a changeless sense of who you are, what you are about and what you value.

With a mission statement, we can flow with changes. We don’t need prejudgments or prejudices. We don’t need to figure out everything else in life, to stereotype and categorize everything and everybody in order to accommodate reality.

Our personal environment is also changing at an ever-increasing pace. Such rapid change burns out a large number of people who feel they can hardly handle it, can hardly cope with life. They become reactive and essentially give up, hoping that the things that happen to them will be good.

But it doesn’t have to be that way. In the Nazi death camps where Viktor Frankl learned the principle of proactivity, he also learned the importance of purpose, of meaning in life. The essence of “logotherapy,” the philosophy he later developed and taught, is that many so-called mental and emotional illnesses are really symptoms of an underlying sense of meaninglessness or emptiness. Logotherapy eliminates that emptiness by helping the individual to detect his unique meaning, his mission in life.

Once you have that sense of mission, you have the essence of your own proactivity. You have the vision and the values which direct your life. You have the basic direction from which you set your long-and short-term goals. You have the power of a written constitution based on correct principles, against which every decision concerning the most effective use of your time, your talents, and your energies can be effectively measured.
In order to write a personal mission statement, we must begin at the very center of our Circle of Influence, that center comprised of our most basic paradigms, the lens through which we see the world.

It is here that we deal with our vision and our values. It is here that we use our endowment of self-awareness to examine our maps and, if we value correct principles, to make certain that our maps accurately describe the territory, that our paradigms are based on principles and reality. It is here that we use our endowment of conscience as a compass to help us detect our own unique talents and areas of contribution. It is here that we use our endowment of imagination to mentally create the end we desire, giving direction and purpose to our beginnings and providing the substance of a written personal constitution.

It is also here that our focused efforts achieve the greatest results. As we work within the very center of our Circle of Influence, we expand it. This is highest leverage PC work, significantly impacting the effectiveness of every aspect of our lives.

Whatever is at the center of our life will be the source of our security, guidance, wisdom, and power.

*Security* represents your sense of worth, your identity, your emotional anchorage, your self-esteem, your basic personal strength or lack of it.

*Guidance* means your source of direction in life. Encompassed by your map, your internal frame of reference that interprets for you what is happening out there, are standards or principles or implicit criteria that govern moment by moment decision-making and doing.

*Wisdom* is your perspective on life, your sense of balance, your understanding of how the various parts and principles apply and relate to each other. It embraces judgment, discernment, comprehension. It is a gestalt or oneness, an integrated wholeness.

*Power* is the faculty or capacity to act, the strength and potency to accomplish something. It is the vital energy to make choices and decisions. It also includes the capacity to overcome deeply embedded habits and to cultivate higher, more effective ones.
These four factors—security, guidance, wisdom, and power—are interdependent. Security and clear guidance bring true wisdom, and wisdom becomes the spark or catalyst to release and direct power. When these four factors are present together, harmonized and enlivened by each other, they create the great force of a noble personality, a balanced character, a beautifully integrated individual.

These life-support factors also undergird every other dimension of life. And none of them is an all-or-nothing matter. The degree to which you have developed each one could be charted somewhere on a continuum, much like the maturity continuum described earlier. At the bottom end, the four factors are weak. You are basically dependent on circumstances or other people, things over which you have no direct control. At the top end you are in control. You have independent strength and the foundation for rich, interdependent relationships.

Your security lies somewhere on the continuum between extreme insecurity on one end, wherein your life is buffeted by all the fickle forces that play upon it, and a deep sense of high intrinsic worth and personal security on the other end. Your guidance ranges on the continuum from dependence on the social mirror or other unstable, fluctuating sources to strong inner direction. Your wisdom falls somewhere between a totally inaccurate map where everything is distorted and nothing seems to fit, and a complete and accurate map of life wherein all the
parts and principles are properly related to each other. Your power lies somewhere between immobilization or being a puppet pulled by someone else’s strings to high proactivity, the power to act according to your own values instead of being acted upon by other people and circumstances.

The location of these factors on the continuum, the resulting degree of their integration, harmony, and balance, and their positive impact on every aspect of your life is a function of your center, the basic paradigms at your very core.
Each of us has a center, though we usually don’t recognize it as such. Neither do we recognize the all-encompassing effects of that center on every aspect of our lives.

Let’s briefly examine several centers or core paradigms people typically have for a better understanding of how they affect these four fundamental dimensions and, ultimately, the sum of life that flows from them.

**Spouse Centeredness.** Marriage can be the most intimate, the most satisfying, the most enduring, growth-producing of human relationships. It might seem natural and proper to be centered on one’s husband or wife.

But experience and observation tell a different story. Over the years, I have been involved in working with many troubled marriages, and I have observed a certain thread weaving itself through almost every spouse-centered relationship I have encountered. That thread is strong emotional dependence.

If our sense of emotional worth comes primarily from our marriage, then we become highly dependent upon that relationship. We become vulnerable to the moods and feelings, the behavior and treatment of our spouse, or to any external event that may impinge on the relationship—a new child, in-laws, economic setbacks, social successes, and so forth.

When responsibilities increase and stresses come in the marriage, we tend to revert to the scripts we were given as we were growing up. But so does our spouse. And those scripts are usually different. Different ways of handling financial, child discipline, or in-law issues come to the surface. When these deep-seated tendencies combine with the emotional dependency in the marriage, the spouse-centered relationship reveals all its vulnerability.

When we are dependent on the person with whom we are in conflict, both need and conflict are compounded. Love-hate overreactions, fight-or-flight tendencies, withdrawal, aggressiveness, bitterness, resentment, and cold competition are some of the usual results. When these occur, we tend to fall even further back on background tendencies and habits in an effort to justify and defend our own behavior and we attack our spouse’s.

Inevitably, anytime we are too vulnerable we feel the need to protect ourselves.
from further wounds. So we resort to sarcasm, cutting humor, criticism—anything that will keep from exposing the tenderness within. Each partner tends to wait on the initiative of the other for love, only to be disappointed but also confirmed as to the rightness of the accusations made.

There is only phantom security in such a relationship when all appears to be going well. Guidance is based on the emotion of the moment. Wisdom and power are lost in the counterdependent negative interactions.

**Family Centeredness.** Another common center is the family. This, too, may seem to be natural and proper. As an area of focus and deep investment, it provides great opportunities for deep relationships, for loving, for sharing, for much that makes life worthwhile. But as a center, it ironically destroys the very elements necessary to family success.

People who are family-centered get their sense of security or personal worth from the family tradition and culture or the family reputation. Thus, they become vulnerable to any changes in that tradition or culture and to any influences that would affect that reputation.

Family-centered parents do not have the emotional freedom, the power, to raise their children with their ultimate welfare truly in mind. If they derive their own security from the family, their need to be popular with their children may override the importance of a long-term investment in their children’s growth and development. Or they may be focused on the proper and correct behavior of the moment. Any behavior that they consider improper threatens their security. They become upset, guided by the emotions of the moment, spontaneously reacting to the immediate concern rather than the long-term growth and development of the child. They may yell or scream. They may overreact and punish out of bad temper. They tend to love their children conditionally, making them emotionally dependent or counterdependent and rebellious.

**Money Centeredness.** Another logical and extremely common center to people’s lives is making money. Economic security is basic to one’s opportunity to do much in any other dimension. In a hierarchy or continuum of needs, physical survival and financial security comes first. Other needs are not even activated until that basic need is satisfied, at least minimally.

Most of us face economic worries. Many forces in the wider culture can and do act upon our economic situation, causing or threatening such disruption that we often experience concern and worry that may not always rise to the conscious
Sometimes there are apparently noble reasons given for making money, such as the desire to take care of one’s family. And these things are important. But to focus on money-making as a center will bring about its own undoing.

Consider again the four life-support factors—security, guidance, wisdom, and power. Suppose I derive much of my security from my employment or from my income or net worth. Since many factors affect these economic foundations, I become anxious and uneasy, protective and defensive, about anything that may affect them. When my sense of personal worth comes from my net worth, I am vulnerable to anything that will affect that net worth. But work and money, per se, provide no wisdom, no guidance, and only a limited degree of power and security. All it takes to show the limitations of a money center is a crisis in my life or in the life of a loved one.

Money-centered people often put aside family or other priorities, assuming everyone will understand that economic demands come first. I know one father who was leaving with his children for a promised trip to the circus when a phone call came for him to come to work instead. He declined. When his wife suggested that perhaps he should have gone to work, he responded, “The work will come again, but childhood won’t.” For the rest of their lives his children remembered this little act of priority setting, not only as an object lesson in their minds but as an expression of love in their hearts.

**Work Centeredness.** Work-centered people may become “workaholics,” driving themselves to produce at the sacrifice of health, relationships, and other important areas of their lives. Their fundamental identity comes from their work—“I’m a doctor,” “I’m a writer,” “I’m an actor.”

Because their identity and sense of self-worth are wrapped up in their work, their security is vulnerable to anything that happens to prevent them from continuing in it. Their guidance is a function of the demands of the work. Their wisdom and power come in the limited areas of their work, rendering them ineffective in other areas of life.

**Possession Centeredness.** A driving force of many people is possessions—not only tangible, material possessions such as fashionable clothes, homes, cars, boats, and jewelry, but also the intangible possessions of fame, glory, or social prominence. Most of us are aware, through our own experience, how singularly flawed such a center is, simply because it can vanish rapidly and it is influenced
by so many forces.  
If my sense of security lies in my reputation or in the things I have, my life will be in a constant state of threat and jeopardy that these possessions may be lost or stolen or devalued. If I’m in the presence of someone of greater net worth or fame or status, I feel inferior. If I’m in the presence of someone of lesser net worth or fame or status, I feel superior. My sense of self-worth constantly fluctuates. I don’t have any sense of constancy or anchorage or persistent selfhood. I am constantly trying to protect and insure my assets, properties, securities, position, or reputation. We have all heard stories of people committing suicide after losing their fortunes in a significant stock decline or their fame in a political reversal.

**Pleasure Centeredness.** Another common center, closely allied with possessions, is that of fun and pleasure. We live in a world where instant gratification is available and encouraged. Television and movies are major influences in increasing people’s expectations. They graphically portray what other people have and can do in living the life of ease and “fun.”

But while the glitter of pleasure-centered life-styles is graphically portrayed, the natural result of such life-styles—the impact on the inner person, on productivity, on relationships—is seldom accurately seen.

Innocent pleasures in moderation can provide relaxation for the body and mind and can foster family and other relationships. But pleasure, per se, offers no deep, lasting satisfaction or sense of fulfillment. The pleasure-centered person, too soon bored with each succeeding level of “fun,” constantly cries for more and more. So the next new pleasure has to be bigger and better, more exciting, with a bigger “high.” A person in this state becomes almost entirely narcissistic, interpreting all of life in terms of the pleasure it provides to the self here and now.

Too many vacations that last too long, too many movies, too much TV, too much video game playing—too much undisciplined leisure time in which a person continually takes the course of least resistance gradually wastes a life. It ensures that a person’s capacities stay dormant, that talents remain undeveloped, that the mind and spirit become lethargic and that the heart is unfulfilled. Where is the security, the guidance, the wisdom, and the power? At the low end of the continuum, in the pleasure of a fleeting moment.

Malcolm Muggeridge writes “A Twentieth-Century Testimony”:

When I look back on my life nowadays, which I sometimes do, what
strikes me most forcibly about it is that what seemed at the time most significant and seductive, seems now most futile and absurd. For instance, success in all of its various guises; being known and being praised; ostensible pleasures, like acquiring money or seducing women, or traveling, going to and fro in the world and up and down in it like Satan, explaining and experiencing whatever Vanity Fair has to offer.

In retrospect, all these exercises in self-gratification seem pure fantasy, what Pascal called, “licking the earth.”

**Friend/Enemy Centeredness.** Young people are particularly, though certainly not exclusively, susceptible to becoming friend-centered. Acceptance and belonging to a peer group can become almost supremely important. The distorted and ever-changing social mirror becomes the source for the four life-support factors, creating a high degree of dependence on the fluctuating moods, feelings, attitudes, and behavior of others.

Friend centeredness can also focus exclusively on one person, taking on some of the dimensions of marriage. The emotional dependence on one individual, the escalating need/conflict spiral, and the resulting negative interactions can grow out of friend centeredness.

And what about putting an *enemy* at the center of one’s life? Most people would never think of it, and probably no one would ever do it consciously. Nevertheless, enemy centering is very common, particularly when there is frequent interaction between people who are in real conflict. When someone feels he has been unjustly dealt with by an emotionally or socially significant person, it is very easy for him to become preoccupied with the injustice and make the other person the center of his life. Rather than proactively leading his own life, the enemy-centered person is counterdependently reacting to the behavior and attitudes of a perceived enemy.

One friend of mine who taught at a university became very distraught because of the weaknesses of a particular administrator with whom he had a negative relationship. He allowed himself to think about the man constantly until eventually it became an obsession. It so preoccupied him that it affected the quality of his relationships with his family, his church, and his working associates. He finally came to the conclusion that he had to leave the university and accept a teaching appointment somewhere else.

“Wouldn’t you really prefer to teach at this university, if the man were not
“Why have you made this administrator the center of your life?” I asked him.

He was shocked by the question. He denied it. But I pointed out to him that he was allowing one individual and his weaknesses to distort his entire map of life, to undermine his faith and the quality of his relationships with his loved ones.

He finally admitted that this individual had had such an impact on him, but he denied that he himself had made all these choices. He attributed the responsibility for the unhappy situation to the administrator. He, himself, he declared, was not responsible.

As we talked, little by little, he came to realize that he was indeed responsible, but that because he did not handle this responsibility well, he was being irresponsible.

* 

Many divorced people fall into a similar pattern. They are still consumed with anger and bitterness and self-justification regarding an ex-spouse. In a negative sense, psychologically they are still married—they each need the weaknesses of the former partner to justify their accusations.

Many “older” children go through life either secretly or openly hating their parents. They blame them for past abuses, neglect, or favoritism and they center their adult life on that hatred, living out the reactive, justifying script that accompanies it.

The individual who is friend-or enemy-centered has no intrinsic security. Feelings of self-worth are volatile, a function of the emotional state or behavior of other people. Guidance comes from the person’s perception of how others will respond, and wisdom is limited by the social lens or by an enemy-centered paranoia. The individual has no power. Other people are pulling the strings.

CHURCH CENTEREDNESS. I believe that almost anyone who is seriously involved in any church will recognize that churchgoing is not synonymous with personal spirituality. There are some people who get so busy in church worship and projects that they become insensitive to the pressing human needs that surround them, contradicting the very precepts they profess to believe deeply. There are
others who attend church less frequently or not at all but whose attitudes and behavior reflect a more genuine centering in the principles of the basic Judeo-Christian ethic.

Having participated throughout my life in organized church and community service groups, I have found that attending church does not necessarily mean living the principles taught in those meetings. You can be active in a church but inactive in its gospel.

In the church-centered life, image or appearance can become a person’s dominant consideration, leading to hypocrisy that undermines personal security and intrinsic worth. Guidance comes from a social conscience, and the church-centered person tends to label others artificially in terms of “active,” “inactive,” “liberal,” “orthodox,” or “conservative.”

Because the church is a formal organization made up of policies, programs, practices, and people, it cannot by itself give a person any deep, permanent security or sense of intrinsic worth. Living the principles taught by the church can do this, but the organization alone cannot.

Nor can the church give a person a constant sense of guidance. Church-centered people often tend to live in compartments, acting and thinking and feeling in certain ways on the Sabbath and in totally different ways on weekdays. Such a lack of wholeness or unity or integrity is a further threat to security, creating the need for increased labeling and self-justifying.

Seeing the church as an end rather than as a means to an end undermines a person’s wisdom and sense of balance. Although the church claims to teach people about the source of power, it does not claim to be that power itself. It claims to be one vehicle through which divine power can be channeled into man’s nature.

**Self-Centeredness.** Perhaps the most common center today is the self. The most obvious form is *selfishness*, which violates the values of most people. But if we look closely at many of the popular approaches to growth and self-fulfillment, we often find self-centering at their core.

There is little security, guidance, wisdom, or power in the limited center of self. Like the Dead Sea in Israel, it accepts but never gives. It becomes stagnant.

On the other hand, paying attention to the development of self in the greater perspective of improving one’s ability to serve, to produce, to contribute in meaningful ways, gives context for dramatic increase in the four life-support factors.
These are some of the more common centers from which people approach life. It is often much easier to recognize the center in someone else’s life than to see it in your own. You probably know someone who puts making money ahead of everything else. You probably know someone whose energy is devoted to justifying his or her position in an ongoing negative relationship. If you look, you can sometimes see beyond behavior into the center that creates it.
IDENTIFYING YOUR CENTER

But where do you stand? What is at the center of your own life? Sometimes that isn’t easy to see.

Perhaps the best way to identify your own center is to look closely at your life-support factors. If you can identify with one or more of the descriptions below, you can trace it back to the center from which it flows, a center which may be limiting your personal effectiveness.

<td>- You see the world in terms of &quot;believers&quot; and &quot;nonbelievers,&quot; &quot;belongers&quot; and &quot;non-belongers.&quot;</td>
<td>- Perceived power comes from your church position or role.</td>
</tr>
<tr>
<td></td>
<td>- You find identity and security in religious labels and comparisons.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Self-Center ed</strong></td>
<td>- Your security is constantly changing and shifting.</td>
<td>- Your judgment criteria are: &quot;If it feels good . . . , &quot;What I want?&quot;, &quot;What I need?&quot;, &quot;What's in it for me?&quot;</td>
<td>- You view the world by how decisions, events, or circumstances will affect you.</td>
<td>- Your ability to act is limited to your own resources, without the benefits of interdependency.</td>
</tr>
</tbody>
</table>

More often than not, a person's center is some combination of these and/or other centers. Most people are very much a function of a variety of influences that play upon their lives. Depending on external or internal conditions, one particular center may be activated until the underlying needs are satisfied. Then
another center becomes the compelling force.

As a person fluctuates from one center to another, the resulting relativism is like roller coasting through life. One moment you’re high, the next moment you’re low, making efforts to compensate for one weakness by borrowing strength from another weakness. There is no consistent sense of direction, no persistent wisdom, no steady power supply or sense of personal, intrinsic worth and identity.

The ideal, of course, is to create one clear center from which you consistently derive a high degree of security, guidance, wisdom, and power, empowering your proactivity and giving congruency and harmony to every part of your life.
By centering our lives on correct principles, we create a solid foundation for development of the four life-support factors.

Our security comes from knowing that, unlike other centers based on people or things which are subject to frequent and immediate change, correct principles do not change. We can depend on them.

Principles don’t react to anything. They don’t get mad and treat us differently. They won’t divorce us or run away with our best friend. They aren’t out to get us. They can’t pave our way with shortcuts and quick fixes. They don’t depend on the behavior of others, the environment, or the current fad for their validity. Principles don’t die. They aren’t here one day and gone the next. They can’t be destroyed by fire, earthquake or theft.

Principles are deep, fundamental truths, classic truths, generic common denominators. They are tightly interwoven threads running with exactness, consistency, beauty, and strength through the fabric of life.

Even in the midst of people or circumstances that seem to ignore the principles, we can be secure in the knowledge that principles are bigger than people or circumstances, and that thousands of years of history have seen them triumph, time and time again. Even more important, we can be secure in the knowledge that we can validate them in our own lives, by our own experience.

Admittedly, we’re not omniscient. Our knowledge and understanding of correct principles is limited by our own lack of awareness of our true nature and the world around us and by the flood of trendy philosophies and theories that are not in harmony with correct principles. These ideas will have their season of acceptance, but, like many before them, they won’t endure because they’re built on false foundations.

We are limited, but we can push back the borders of our limitations. An understanding of the principle of our own growth enables us to search out correct principles with the confidence that the more we learn, the more clearly we can focus the lens through which we see the world. The principles don’t change; our understanding of them does.

The wisdom and guidance that accompany principle-centered living come from correct maps, from the way things really are, have been, and will be. Correct maps enable us to clearly see where we want to go and how to get there.
We can make our decisions using the correct data that will make their implementation possible and meaningful.

The personal *power* that comes from principle-centered living is the power of a self-aware, knowledgeable, proactive individual, unrestricted by the attitudes, behaviors, and actions of others or by many of the circumstances and environmental influences that limit other people.

The only real limitation of power is the natural consequences of the principles themselves. We are free to choose our actions, based on our knowledge of correct principles, but we are not free to choose the consequences of those actions. Remember, “If you pick up one end of the stick, you pick up the other.”

Principles always have natural consequences attached to them. There are positive consequences when we live in harmony with the principles. There are negative consequences when we ignore them. But because these principles apply to everyone, whether or not they are aware, this limitation is universal. And the more we know of correct principles, the greater is our personal freedom to act wisely.

By centering our lives on timeless, unchanging principles, we create a fundamental paradigm of effective living. It is the center that puts all other centers in perspective.

</table>
Remember that your paradigm is the source from which your attitudes and behaviors flow. A paradigm is like a pair of glasses; it affects the way you see everything in your life. If you look at things through the paradigm of correct principles, what you see in life is dramatically different from what you see through any other centered paradigm.

I have included in the Appendix section of this book a detailed chart which shows how each center we’ve discussed might possibly affect the way you see everything else.* But for a quick understanding of the difference your center makes, let’s look at just one example of a specific problem as seen through the different paradigms. As you read, try to put on each pair of glasses. Try to feel the response that flows from the different centers.

* 

Suppose tonight you have invited your wife to go to a concert. You have the tickets; she’s excited about going. It’s four o’clock in the afternoon.

All of a sudden, your boss calls you into his office and says he needs your help through the evening to get ready for an important meeting at 9 A.M. tomorrow.

If you’re looking through spouse-centered or family-centered glasses, your main concern will be your wife. You may tell the boss you can’t stay and you take her to the concert in an effort to please her. You may feel you have to stay to
protect your job, but you’ll do so grudgingly, anxious about her response, trying to justify your decision and protect yourself from her disappointment or anger.

If you’re looking through a *money-centered* lens, your main thought will be of the overtime you’ll get or the influence working late will have on a potential raise. You may call your wife and simply tell her you have to stay, assuming she’ll understand that economic demands come first.

If you’re *work-centered*, you may be thinking of the opportunity. You can learn more about the job. You can make some points with the boss and further your career. You may give yourself a pat on the back for putting in hours well beyond what is required, evidence of what a hard worker you are. Your wife should be proud of you!

If you’re *possession-centered*, you might be thinking of the things the overtime income could buy. Or you might consider what an asset to your reputation at the office it would be if you stayed. Everyone would hear tomorrow how noble, how sacrificing and dedicated you are.

If you’re *pleasured-centered*, you’ll probably can the work and go to the concert, even if your wife would be happy for you to work late. You deserve a night out!

If you’re *friend-centered*, your decision would be influenced by whether or not you had invited friends to attend the concert with you. Or whether your friends at work were going to stay late, too.

If you’re *enemy-centered*, you may stay late because you know it will give you a big edge over that person in the office who thinks he’s the company’s greatest asset. While he’s off having fun, you’ll be working and slaving, doing his work and yours, sacrificing your personal pleasure for the good of the company he can so blithely ignore.

If you’re *church-centered*, you might be influenced by plans other church members have to attend the concert, by whether or not any church members work at your office, or by the nature of the concert—Handel’s *Messiah* might rate higher priority than a rock concert. Your decision might also be affected by what you think a “good church member” would do and by whether you view the extra work as “service” or “seeking after material wealth.”

If you’re *self-centered*, you’ll be focused on what will do you the most good. Would it be better for you to go out for the evening? Or would it be better for you to make a few points with the boss? How the different options affect you will be your main concern.

As we consider various ways of looking at a single event, is it any wonder that
we have “young lady/old lady” perception problems in our interactions with each other? Can you see how fundamentally our centers affect us? Right down to our motivations, our daily decisions, our actions (or, in too many cases, our reactions), our interpretations of events? That’s why understanding your own center is so important. And if that center does not empower you as a proactive person, it becomes fundamental to your effectiveness to make the necessary paradigm shifts to create a center that will.

As a principle-centered person, you try to stand apart from the emotion of the situation and from other factors that would act on you, and evaluate the options. Looking at the balanced whole—the work needs, the family needs, other needs that may be involved and the possible implications of the various alternative decisions—you’ll try to come up with the best solution, taking all factors into consideration.

Whether you go to the concert or stay and work is really a small part of an effective decision. You might make the same choice with a number of other centers. But there are several important differences when you are coming from a principle-centered paradigm.

First, you are not being acted upon by other people or circumstances. You are proactively choosing what you determine to be the best alternative. You make your decision consciously and knowledgeably.

Second, you know your decision is most effective because it is based on principles with predictable long-term results.

Third, what you choose to do contributes to your ultimate values in life. Staying at work to get the edge on someone at the office is an entirely different evening in your life from staying because you value your boss’s effectiveness and you genuinely want to contribute to the company’s welfare. The experiences you have as you carry out your decisions take on quality and meaning in the context of your life as a whole.

Fourth, you can communicate to your wife and your boss within the strong networks you’ve created in your interdependent relationships. Because you are independent, you can be effectively interdependent. You might decide to delegate what is delegable and come in early the next morning to do the rest.

And finally, you’ll feel comfortable about your decision. Whatever you choose to do, you can focus on it and enjoy it.

As a principle-centered person, you see things differently. And because you see things differently, you think differently, you act differently. Because you have a high degree of security, guidance, wisdom, and power that flows from a solid, unchanging core, you have the foundation of a highly proactive and highly effective life.
Writing and Using a Personal Mission Statement

As we go deeply within ourselves, as we understand and realign our basic paradigms to bring them in harmony with correct principles, we create both an effective, empowering center and a clear lens through which we can see the world. We can then focus that lens on how we, as unique individuals, relate to that world.

Frankl says we detect rather than invent our missions in life. I like that choice of words. I think each of us has an internal monitor or sense, a conscience, that gives us an awareness of our own uniqueness and the singular contributions that we can make. In Frankl’s words, “Everyone has his own specific vocation or mission in life…. Therein he cannot be replaced, nor can his life be repeated. Thus, everyone’s task is as unique as is his specific opportunity to implement it.”

In seeking to give verbal expression to that uniqueness, we are again reminded of the fundamental importance of proactivity and of working within our Circle of Influence. To seek some abstract meaning to our lives out in our Circle of Concern is to abdicate our proactive responsibility, to place our own first creation in the hands of circumstance and other people.

Our meaning comes from within. Again, in the words of Frankl, “Ultimately, man should not ask what the meaning of his life is, but rather must recognize that it is he who is asked. In a word, each man is questioned by life; and he can only answer to life by answering for his own life; to life he can only respond by being responsible.”

Personal responsibility, or proactivity, is fundamental to the first creation. Returning to the computer metaphor, Habit 1 says “You are the programmer.” Habit 2, then, says, “Write the program.” Until you accept the idea that you are responsible, that you are the programmer, you won’t really invest in writing the program.

As proactive people, we can begin to give expression to what we want to be and to do in our lives. We can write a personal mission statement, a personal constitution.

A mission statement is not something you write overnight. It takes deep introspection, careful analysis, thoughtful expression, and often many rewrites to produce it in final form. It may take you several weeks or even months before you feel really comfortable with it, before you feel it is a complete and concise
expression of your innermost values and directions. Even then, you will want to review it regularly and make minor changes as the years bring additional insights or changing circumstances.

But fundamentally, your mission statement becomes your constitution, the solid expression of your vision and values. It becomes the criterion by which you measure everything else in your life.

I recently finished reviewing my own mission statement, which I do fairly regularly. Sitting on the edge of a beach, alone, at the end of a bicycle ride, I took out my organizer and hammered it out. It took several hours, but I felt a sense of clarity, a sense of organization and commitment, a sense of exhilaration and freedom.

I find the process is as important as the product. Writing or reviewing a mission statement changes you because it forces you to think through your priorities deeply, carefully, and to align your behavior with your beliefs. As you do, other people begin to sense that you’re not being driven by everything that happens to you. You have a sense of mission about what you’re trying to do and you are excited about it.
Our self-awareness empowers us to examine our own thoughts. This is particularly helpful in creating a personal mission statement because the two unique human endowments that enable us to practice Habit 2—imagination and conscience—are primarily functions of the right side of the brain. Understanding how to tap into that right brain capacity greatly increases our first creation ability.

A great deal of research has been conducted for decades on what has come to be called brain dominance theory. The findings basically indicate that each hemisphere of the brain—left and right—tends to specialize in and preside over different functions, process different kinds of information, and deal with different kinds of problems.

Essentially, the left hemisphere is the more logical/verbal one and the right hemisphere the more intuitive, creative one. The left deals with words, the right with pictures; the left with parts and specifics, the right with wholes and the relationship between the parts. The left deals with analysis, which means to break apart; the right with synthesis, which means to put together. The left deals with sequential thinking; the right with simultaneous and holistic thinking. The left is time bound; the right is time free.

Although people use both sides of the brain, one side or the other generally tends to be dominant in each individual. Of course, the ideal would be to cultivate and develop the ability to have good crossover between both sides of the brain so that a person could first sense what the situation called for and then use the appropriate tool to deal with it. But people tend to stay in the “comfort zone” of their dominant hemisphere and process every situation according to either a right or left brain preference.

In the words of Abraham Maslow, “He that is good with a hammer tends to think everything is a nail.” This is another factor that affects the “young lady/old lady” perception difference. Right brain and left brain people tend to look at things in different ways.

We live in a primarily left brain-dominant world, where words and measurement and logic are enthroned, and the more creative, intuitive, sensing, artistic aspect of our nature is often subordinated. Many of us find it more difficult to tap into our right brain capacity.
Admittedly this description is oversimplified and new studies will undoubtedly throw more light on brain functioning. But the point here is that we are capable of performing many different kinds of thought processes and we barely tap our potential. As we become aware of its different capacities, we can consciously use our minds to meet specific needs in more effective ways.
TWO WAYS TO TAP THE RIGHT BRAIN

If we use the brain dominance theory as a model, it becomes evident that the quality of our first creation is significantly impacted by our ability to use our creative right brain. The more we are able to draw upon our right brain capacity, the more fully we will be able to visualize, to synthesize, to transcend time and present circumstances, to project a holistic picture of what we want to do and to be in life.
Expand Perspective

Sometimes we are knocked out of our left brain environment and thought patterns and into the right brain by an unplanned experience. The death of a loved one, a severe illness, a financial setback, or extreme adversity can cause us to stand back, look at our lives, and ask ourselves some hard questions: “What’s really important? Why am I doing what I’m doing?”

But if you’re proactive, you don’t have to wait for circumstances or other people to create perspective expanding experiences. You can consciously create your own.

There are a number of ways to do this. Through the powers of your imagination, you can visualize your own funeral, as we did at the beginning of this chapter. Write your own eulogy. Actually write it out. Be specific.

You can visualize your twenty-fifth and then your fiftieth wedding anniversary. Have your spouse visualize this with you. Try to capture the essence of the family relationship you want to have created through your day-by-day investment over a period of that many years.

You can visualize your retirement from your present occupation. What contributions, what achievements will you want to have made in your field? What plans will you have after retirement? Will you enter a second career?

Expand your mind. Visualize in rich detail. Involve as many emotions and feelings as possible. Involve as many of the senses as you can.

I have done similar visualization exercises with some of my university classes. “Assume you only have this one semester to live,” I tell my students, “and that during this semester you are to stay in school as a good student. Visualize how you would spend your semester.”

Things are suddenly placed in a different perspective. Values quickly surface that before weren’t even recognized.

I have also asked students to live with that expanded perspective for a week and keep a diary of their experiences.

The results are very revealing. They start writing to parents to tell them how much they love and appreciate them. They reconcile with a brother, a sister, a friend where the relationship has deteriorated.

The dominant, central theme of their activities, the underlying principle, is love. The futility of bad-mouthing, bad thinking, put-downs, and accusation
becomes very evident when they think in terms of having only a short time to live. Principles and values become more evident to everybody.

There are a number of techniques using your imagination that can put you in touch with your values. But the net effect of every one I have ever used is the same. When people seriously undertake to identify what really matters most to them in their lives, what they really want to be and to do, they become very reverent. They start to think in larger terms than today and tomorrow.
Visualization and Affirmation

Personal leadership is not a singular experience. It doesn’t begin and end with the writing of a personal mission statement. It is, rather, the ongoing process of keeping your vision and values before you and aligning your life to be congruent with those most important things. And in that effort, your powerful right brain capacity can be a great help to you on a daily basis as you work to integrate your personal mission statement into your life. It’s another application of “begin with the end in mind.”

Let’s go back to an example we mentioned before. Suppose I am a parent who really deeply loves my children. Suppose I identify that as one of my fundamental values in my personal mission statement. But suppose, on a daily basis, I have trouble overreacting.

I can use my right brain power of visualization to write an “affirmation” that will help me become more congruent with my deeper values in my daily life.

A good affirmation has five basic ingredients: it’s personal, it’s positive, it’s present tense, it’s visual, and it’s emotional. So I might write something like this: “It is deeply satisfying (emotional) that I (personal) respond (present tense) with wisdom, love, firmness, and self-control (positive) when my children misbehave.”

Then I can visualize it. I can spend a few minutes each day and totally relax my mind and body. I can think about situations in which my children might misbehave. I can visualize them in rich detail. I can feel the texture of the chair I might be sitting on, the floor under my feet, the sweater I’m wearing. I can see the dress my daughter has on, the expression on her face. The more clearly and vividly I can imagine the detail, the more deeply I will experience it, the less I will see it as a spectator.

Then I can see her do something very specific which normally makes my heart pound and my temper start to flare. But instead of seeing my normal response, I can see myself handle the situation with all the love, the power, the self-control I have captured in my affirmation. I can write the program, write the script, in harmony with my values, with my personal mission statement.

And if I do this, day after day my behavior will change. Instead of living out of the scripts given to me by my own parents or by society or by genetics or my environment, I will be living out of the script I have written from my own self-
selected value system.

I have helped and encouraged my son, Sean, to use this affirmation process extensively throughout his football career. We started when he played quarterback in high school, and eventually, I taught him how to do it on his own.

We would try to get him in a very relaxed state of mind through deep breathing and a progressive muscle relaxation technique so that he became very quiet inside. Then I would help him visualize himself right in the heat of the toughest situations imaginable.

He would imagine a big blitz coming at him fast. He had to read the blitz and respond. He would imagine giving audibles at the line after reading defenses. He would imagine quick reads with his first receiver, his second receiver, his third receiver. He would imagine options that he normally wouldn’t do.

At one point in his football career, he told me he was constantly getting uptight. As we talked, I realized that he was visualizing uptightness. So we worked on visualizing relaxation in the middle of the big pressure circumstance. We discovered that the nature of the visualization is very important. If you visualize the wrong thing, you’ll produce the wrong thing.

Dr. Charles Garfield has done extensive research on peak performers, both in athletics and in business. He became fascinated with peak performance in his work with the NASA program, watching the astronauts rehearse everything on earth, again and again in a simulated environment before they went to space. Although he had a doctorate in mathematics, he decided to go back and get another Ph.D. in the field of psychology and study the characteristics of peak performers.

One of the main things his research showed was that almost all of the world-class athletes and other peak performers are visualizers. They see it; they feel it; they experience it before they actually do it. They begin with the end in mind.

You can do it in every area of your life. Before a performance, a sales presentation, a difficult confrontation, or the daily challenge of meeting a goal, see it clearly, vividly, relentlessly, over and over again. Create an internal “comfort zone.” Then, when you get into the situation, it isn’t foreign. It doesn’t scare you.

Your creative, visual right brain is one of your most important assets, both in creating your personal mission statement and in integrating it into your life.

There is an entire body of literature and audio and video tapes that deals with this process of visualization and affirmation. Some of the more recent developments in this field include such things as subliminal programming,
neurolinguistic programming, and new forms of relaxation and self-talk processes. These all involve explanation, elaboration and different packaging of the fundamental principles of the first creation.

My review of the success literature brought me in contact with hundreds of books on this subject. Although some made extravagant claims and relied on anecdotal rather than scientific evidence, I think that most of the material is fundamentally sound. The majority of it appears to have originally come out of the study of the Bible by many individuals.

In effective personal leadership, visualization and affirmation techniques emerge naturally out of a foundation of well thought through purposes and principles that become the center of a person’s life. They are extremely powerful in rescripting and reprogramming, into writing deeply committed-to purposes and principles into one’s heart and mind. I believe that central to all enduring religions in society are the same principles and practices clothed in different language—meditation, prayer, covenants, or dinances, scripture study, empathy, compassion, and many different forms of the use of both conscience and imagination.

But if these techniques become part of the Personality Ethic and are severed from a base of character and principles, they can be misused and abused in serving other centers, primarily the center of self.

Affirmation and visualization are forms of programming, and we must be certain that we do not submit ourselves to any programming that is not in harmony with our basic center or that comes from sources centered on money-making, self interest, or anything other than correct principles.

The imagination can be used to achieve the fleeting success that comes when a person is focused on material gain or on “what’s in it for me.” But I believe the higher use of imagination is in harmony with the use of conscience to transcend self and create a life of contribution based on unique purpose and on the principles that govern interdependent reality.
IDENTIFYING ROLES AND GOALS

Of course, the logical/verbal left brain becomes important also as you attempt to capture your right brain images, feelings, and pictures in the words of a written mission statement. Just as breathing exercises help integrate body and mind, writing is a kind of psycho-neural muscular activity which helps bridge and integrate the conscious and subconscious minds. Writing distills, crystallizes, and clarifies thought and helps break the whole into parts.

We each have a number of different roles in our lives—different areas or capacities in which we have responsibility. I may, for example, have a role as an individual, a husband, a father, a teacher, a church member, and a businessman. And each of these roles is important.

One of the major problems that arises when people work to become more effective in life is that they don’t think broadly enough. They lose the sense of proportion, the balance, the natural ecology necessary to effective living. They may get consumed by work and neglect personal health. In the name of professional success, they may neglect the most precious relationships in their lives.

You may find that your mission statement will be much more balanced, much easier to work with, if you break it down into the specific role areas of your life and the goals you want to accomplish in each area. Look at your professional role. You might be a salesperson, or a manager, or a product developer. What are you about in that area? What are the values that should guide you? Think of your personal roles—husband, wife, father, mother, neighbor, friend. What are you about in those roles? What’s important to you? Think of community roles—the political area, public service, volunteer organizations.

One executive has used the idea of roles and goals to create the following mission statement:

My mission is to live with integrity and to make a difference in the lives of others.

To fulfill this mission:
I have charity: I seek out and love the one—each one—regardless of his situation.

I sacrifice: I devote my time, talents, and resources to my mission.

I inspire: I teach by example that we are all children of a loving Heavenly Father and that every Goliath can be overcome.

I am impactful: What I do makes a difference in the lives of others.

These roles take priority in achieving my mission:

Husband—my partner is the most important person in my life. Together we contribute the fruits of harmony, industry, charity, and thrift.

Father—I help my children experience progressively greater joy in their lives.

Son/Brother—I am frequently “there” for support and love.

Christian—God can count on me to keep my covenants and to serve his other children.

Neighbor—The love of Christ is visible through my actions toward others.

Change Agent—I am a catalyst for developing high performance in large organizations.

Scholar—I learn important new things every day.

Writing your mission in terms of the important roles in your life gives you balance and harmony. It keeps each role clearly before you. You can review your roles frequently to make sure that you don’t get totally absorbed by one role to the exclusion of others that are equally or even more important in your life.

After you identify your various roles, then you can think about the long-term goals you want to accomplish in each of those roles. We’re into the right brain again, using imagination, creativity, conscience, and inspiration. If these goals are the extension of a mission statement based on correct principles, they will be vitally different from the goals people normally set. They will be in harmony with correct principles, with natural laws, which gives you greater power to achieve them. They are not someone else’s goals you have absorbed. They are your goals. They reflect your deepest values, your unique talent, your sense of mission. And they grow out of your chosen roles in life.
An effective goal focuses primarily on results rather than activity. It identifies where you want to be, and, in the process, helps you determine where you are. It gives you important information on how to get there, and it tells you when you have arrived. It unifies your efforts and energy. It gives meaning and purpose to all you do. And it can finally translate itself into daily activities so that you are proactive, you are in charge of your life, you are making happen each day the things that will enable you to fulfill your personal mission statement.

Roles and goals give structure and organized direction to your personal mission. If you don’t yet have a personal mission statement, it’s a good place to begin. Just identifying the various areas of your life and the two or three important results you feel you should accomplish in each area to move ahead gives you an overall perspective of your life and a sense of direction.

As we move into Habit 3, we’ll go into greater depth in the area of short-term goals. The important application at this point is to identify roles and long-term goals as they relate to your personal mission statement. These roles and goals will provide the foundation for effective goal setting and achieving when we get to the Habit 3 day-to-day management of life and time.
Because Habit 2 is based on principle, it has broad application. In addition to individuals, families, service groups, and organizations of all kinds become significantly more effective as they begin with the end in mind.

Many families are managed on the basis of crises, moods, quick fixes, and instant gratification—not on sound principles. Symptoms surface whenever stress and pressure mount: people become cynical, critical, or silent or they start yelling and overreacting. Children who observe these kinds of behavior grow up thinking the only way to solve problems is flight or fight.

The core of any family is what is changeless, what is always going to be there—shared vision and values. By writing a family mission statement, you give expression to its true foundation.

This mission statement becomes its constitution, the standard, the criterion for evaluation and decision making. It gives continuity and unity to the family as well as direction. When individual values are harmonized with those of the family, members work together for common purposes that are deeply felt.

Again, the process is as important as the product. The very process of writing and refining a mission statement becomes a key way to improve the family. Working together to create a mission statement builds the PC capacity to live it.

By getting input from every family member, drafting a statement, getting feedback, revising it, and using wording from different family members, you get the family talking, communicating, on things that really matter deeply. The best mission statements are the result of family members coming together in a spirit of mutual respect, expressing their different views, and working together to create something greater than any one individual could do alone. Periodic review to expand perspective, shift emphasis or direction, amend or give new meaning to time-worn phrases can keep the family united in common values and purposes.

The mission statement becomes the framework for thinking, for governing the family. When the problems and crises come, the constitution is there to remind family members of the things that matter most and to provide direction for problem solving and decision making based on correct principles.

In our home, we put our mission statement up on a wall in the family room so that we can look at it and monitor ourselves daily.
When we read the phrases about the sounds of love in our home, order, responsible independence, cooperation, helpfulness, meeting needs, developing talents, showing interest in each other’s talents, and giving service to others it gives us some criteria to know how we’re doing in the things that matter most to us as a family.

When we plan our family goals and activities, we say, “In light of these principles, what are the goals we’re going to work on? What are our action plans to accomplish our goals and actualize these values?”

We review the statement frequently and rework goals and jobs twice a year, in September and June—the beginning of school and the end of school—to reflect the situation as it is, to improve it, to strengthen it. It renews us, it recommits us to what we believe in, what we stand for.
Mission statements are also vital to successful organizations. One of the most important thrusts of my work with organizations is to assist them in developing effective mission statements. And to be effective, that statement has to come from within the bowels of the organization. Everyone should participate in a meaningful way—not just the top strategy planners, but everyone. Once again, the involvement process is as important as the written product and is the key to its use.

I am always intrigued whenever I go to IBM and watch the training process there. Time and time again, I see the leadership of the organization come into a group and say that IBM stands for three things: the dignity of the individual, excellence, and service.

These things represent the belief system of IBM. Everything else will change, but these three things will not change. Almost like osmosis, this belief system has spread throughout the entire organization, providing a tremendous base of shared values and personal security for everyone who works there.

Once I was training a group of people for IBM in New York. It was a small group, about twenty people, and one of them became ill. He called his wife in California, who expressed concern because his illness required special treatment. The IBM people responsible for the training session arranged to have him taken to an excellent hospital with medical specialists in the disease. But they could sense that his wife was uncertain and really wanted him home where their personal physician could handle the problem.

So they decided to get him home. Concerned about the time involved in driving him to the airport and waiting for a commercial plane, they brought in a helicopter, flew him to the airport, and hired a special plane just to take this man to California.

I don’t know what costs that involved; my guess would be many thousands of dollars. But IBM believes in the dignity of the individual. That’s what the company stands for. To those present, that experience represented its belief system and was no surprise. I was impressed.

At another time, I was scheduled to train 175 shopping center managers at a
particular hotel. I was amazed at the level of service there. It wasn’t a cosmetic thing. It was evident at all levels, spontaneously, without supervision.

I arrived quite late, checked in, and asked if room service were available. The man at the desk said, “No, Mr. Covey, but if you’re interested, I could go back and get a sandwich or a saïad or whatever you’d like that we have in the kitchen.” His attitude was one of total concern about my comfort and welfare. “Would you like to see your convention room?” he continued. “Do you have everything you need? What can I do for you? I’m here to serve you.”

There was no supervisor there checking up. This man was sincere.

The next day I was in the middle of a presentation when I discovered that I didn’t have all the colored markers I needed. So I went out into the hall during the brief break and found a bellboy running to another convention. “I’ve got a problem,” I said. “I’m here training a group of managers and I only have a short break. I need some more colored pens.”

He whipped around and almost came to attention. He glanced at my name tag and said, “Mr. Covey, I will solve your problem.”

He didn’t say, “I don’t know where to go” or “Well, go and check at the front desk.” He just took care of it. And he made me feel like it was his privilege to do so.

Later, I was in the side lobby, looking at some of the art objects. Someone from the hotel came up to me and said, “Mr. Covey, would you like to see a book that describes the art objects in this hotel?” How anticipatory! How service-oriented!

I next observed one of the employees high up on a ladder cleaning windows in the lobby. From his vantage point he saw a woman having a little difficulty in the garden with a walker. She hadn’t really fallen, and she was with other people. But he climbed down that ladder, went outside, helped the woman into the lobby and saw that she was properly taken care of. Then he went back and finished cleaning the windows.

I wanted to find out how this organization had created a culture where people bought so deeply into the value of customer service. I interviewed housekeepers, waitresses, bellboys in that hotel and found that this attitude had impregnated the minds, hearts, and attitudes of every employee there.

I went through the back door into the kitchen, where I saw the central value: “Uncompromising personalized service.” I finally went to the manager and said, “My business is helping organizations develop a powerful team character, a team culture. I am amazed at what you have here.”

“Do you want to know the real key?” he inquired. He pulled out the mission statement for the hotel chain.
After reading it, I acknowledged, “That’s an impressive statement. But I know many companies that have impressive mission statements.”

“Do you want to see the one for this hotel?” he asked.

“Do you mean you developed one just for this hotel?”

“Yes.”

“Different from the one for the hotel chain?”

“Yes. It’s in harmony with that statement, but this one pertains to our situation, our environment, our time.” He handed me another paper.

“Who developed this mission statement?” I asked.

“Everybody,” he replied.

“Everybody? Really, everybody?”

“Yes.”

“Housekeepers?”

“Yes.”

“Waitresses?”

“Yes.”

“Desk clerks?”

“Yes. Do you want to see the mission statement written by the people who greeted you last night?” He pulled out a mission statement that they, themselves, had written that was interwoven with all the other mission statements. Everyone, at every level, was involved.

The mission statement for that hotel was the hub of a great wheel. It spawned the thoughtful, more specialized mission statements of particular groups of employees. It was used as the criterion for every decision that was made. It clarified what those people stood for—how they related to the customer, how they related to each other. It affected the style of the managers and the leaders. It affected the compensation system. It affected the kind of people they recruited and how they trained and developed them. Every aspect of that organization, essentially, was a function of that hub, that mission statement.

I later visited another hotel in the same chain, and the first thing I did when I checked in was to ask to see their mission statement, which they promptly gave me. At this hotel, I came to understand the motto “Uncompromising personalized service” a little more.

For a three-day period, I watched every conceivable situation where service was called for. I always found that service was delivered in a very impressive, excellent way. But it was always also very personalized. For instance, in the swimming area I asked the attendant where the drinking fountain was. He walked me to it.

But the thing that impressed me the very most was to see an employee, on his
own, admit a mistake to his boss. We ordered room service, and were told when it would be delivered to the room. On the way to our room, the room service person spilled the hot chocolate, and it took a few extra minutes to go back and change the linen on the tray and replace the drink. So the room service was about fifteen minutes late, which was really not that important to us.

Nevertheless, the next morning the room service manager phoned us to apologize and invited us to have either the buffet breakfast or a room service breakfast, compliments of the hotel, to in some way compensate for the inconvenience.

What does it say about the culture of an organization when an employee admits his own mistake, unknown to anyone else, to the manager so that customer or guest is better taken care of!

As I told the manager of the first hotel I visited, I know a lot of companies with impressive mission statements. But there is a real difference, all the difference in the world, in the effectiveness of a mission statement created by everyone involved in the organization and one written by a few top executives behind a mahogany wall.

*

One of the fundamental problems in organizations, including families, is that people are not committed to the determinations of other people for their lives. They simply don’t buy into them.

Many times as I work with organizations, I find people whose goals are totally different from the goals of the enterprise. I commonly find reward systems completely out of alignment with stated value systems.

When I begin work with companies that have already developed some kind of mission statement, I ask them, “How many of the people here know that you have a mission statement? How many of you know what it contains? How many were involved in creating it? How many really buy into it and use it as your frame of reference in making decisions?”

Without involvement, there is no commitment. Mark it down, asterisk it, circle it, underline it. No involvement, no commitment.

Now, in the early stages—when a person is new to an organization or when a child in the family is young—you can pretty well give them a goal and they’ll buy it, particularly if the relationship, orientation, and training are good.

But when people become more mature and their own lives take on a separate
meaning, they want involvement, significant involvement. And if they don’t have that involvement, they don’t buy it. Then you have a significant motivational problem which cannot be solved at the same level of thinking that created it.

That’s why creating an organizational mission statement takes time, patience, involvement, skill, and empathy. Again, it’s not a quick fix. It takes time and sincerity, correct principles, and the courage and integrity to align systems, structure, and management style to the shared vision and values. But it’s based on correct principles and it works.

An organizational mission statement—one that truly reflects the deep shared vision and values of everyone within that organization—creates a great unity and tremendous commitment. It creates in people’s hearts and minds a frame of reference, a set of criteria or guidelines, by which they will govern themselves. They don’t need someone else directing, controlling, criticizing, or taking cheap shots. They have bought into the changeless core of what the organization is about.
APPLICATION SUGGESTIONS

1. Take the time to record the impressions you had in the funeral visualization at the beginning of this chapter. You may want to use the chart below to organize your thoughts.

<table>

2. Take a few moments and write down your roles as you now see them. Are you satisfied with that mirror image of your life?

3. Set up time to completely separate yourself from daily activities and to begin work on your personal mission statement.

4. Go through the chart in Appendix A showing different centers and circle all those you can identify with. Do they form a pattern for the behavior in your life? Are you comfortable with the implications of your analysis?

5. Start a collection of notes, quotes, and ideas you may want to use as resource material in writing your personal mission statement.

6. Identify a project you will be facing in the near future and apply the principle of mental creation. Write down the results you desire and what steps will lead to those results.

7. Share the principles of Habit 2 with your family or work group and suggest that together you begin the process of developing a family or group mission statement.
* Please refer to Appendix A.
HABIT 3
PUT FIRST THINGS FIRST
**PRINCIPLES OF PERSONAL MANAGEMENT**

*Things which matter most must never be at the mercy of things which matter least.*

---

**GOETHE**

Will you take just a moment and write down a short answer to the following two questions? Your answers will be important to you as you begin work on Habit 3.

Question 1: What one thing could you do (you aren’t doing now) that if you did on a regular basis, would make a tremendous positive difference in your personal life?

Question 2: What one thing in your business or professional life would bring similar results?

We’ll come back to these answers later. But first, let’s put Habit 3 in perspective.

Habit 3 is the personal fruit, the practical fulfillment of Habits 1 and 2.
Habit 1 says, “You’re the creator. You are in charge.” It’s based on the four unique human endowments of imagination, conscience, independent will, and, particularly, self-awareness. It empowers you to say, “That’s an unhealthy program I’ve been given from my childhood, from my social mirror. I don’t like that ineffective script. I can change.”

Habit 2 is the first or mental creation. It’s based on imagination—the ability to envision, to see the potential, to create with our minds what we cannot at present see with our eyes; and conscience—the ability to detect our own uniqueness and the personal, moral, and ethical guidelines within which we can most happily fulfill it. It’s the deep contact with our basic paradigms and values and the vision of what we can become.

Habit 3, then, is the second creation, the physical creation. It’s the fulfillment, the actualization, the natural emergence of Habits 1 and 2. It’s the exercise of independent will toward becoming principle-centered. It’s the day-in, day-out, moment-by-moment doing it.

Habits 1 and 2 are absolutely essential and prerequisite to Habit 3. You can’t become principle-centered without first being aware of and developing your own proactive nature. You can’t become principle-centered without first being aware of your paradigms and understanding how to shift them and align them with principles. You can’t become principle-centered without a vision of and a focus on the unique contribution that is yours to make.

But with that foundation, you can become principle-centered, day-in and day-out, moment-by-moment, by living Habit 3—by practicing effective self-management.

Management, remember, is clearly different from leadership. Leadership is primarily a high-powered, right brain activity. It’s more of an art; it’s based on a philosophy. You have to ask the ultimate questions of life when you’re dealing with personal leadership issues.

But once you have dealt with those issues, once you have resolved them, you then have to manage yourself effectively to create a life
congruent with your answers. The ability to manage well doesn’t make much difference if you’re not even in the “right jungle.” But if you are in the right jungle, it makes all the difference. In fact, the ability to manage well determines the quality and even the existence of the second creation. Management is the breaking down, the analysis, the sequencing, the specific application, the time-bound left-brain aspect of effective self-government. My own maxim of personal effectiveness is this: Manage from the left; lead from the right.
The Power of Independent Will

In addition to self-awareness, imagination, and conscience, it is the fourth human endowment—*independent will*—that really makes effective self-management possible. It is the ability to make decisions and choices and to act in accordance with them. It is the ability to act rather than to be acted upon, to proactively carry out the program we have developed through the other three endowments.

The human will is an amazing thing. Time after time, it has triumphed against unbelievable odds. The Helen Kellers of this world give dramatic evidence to the value, the power of the independent will.

But as we examine this endowment in the context of effective self-management, we realize it’s usually not the dramatic, the visible, the once-in-a-lifetime, up-by-the-bootstraps effort that brings enduring success. Empowerment comes from learning how to use this great endowment in the decisions we make every day.

The degree to which we have developed our independent will in our everyday lives is measured by our personal integrity. Integrity is, fundamentally, the value we place on ourselves. It’s our ability to make and keep commitments to ourselves, to “walk our talk.” It’s honor with self, a fundamental part of the Character Ethic, the essence of proactive growth.

Effective management is putting first things first. While leadership decides what “first things” are, it is management that puts them first, day-by-day, moment-by-moment. Management is discipline, carrying it out.

Discipline derives from *disciple*—disciple to a philosophy, disciple to a set of principles, disciple to a set of values, disciple to an overriding purpose, to a superordinate goal or a person who represents that goal.

In other words, if you are an effective manager of your self, your discipline comes from within; it is a function of your independent will. You are a disciple, a follower, of your own deep values and their source. And you have the will, the integrity, to subordinate your feelings, your impulses, your moods to those values.

One of my favorite essays is “The Common Denominator of Success,” written by E. M. Gray. He spent his life searching for the one denominator that all successful people share. He found it wasn’t hard work, good luck, or astute
human relations, though those were all important. The one factor that seemed to transcend all the rest embodies the essence of Habit 3—putting first things first.

“The successful person has the habit of doing the things failures don’t like to do,” he observed. “They don’t like doing them either necessarily. But their disliking is subordinated to the strength of their purpose.”

That subordination requires a purpose, a mission, a Habit 2 clear sense of direction and value, a burning “yes!” inside that makes it possible to say “no” to other things. It also requires independent will, the power to do something when you don’t want to do it, to be a function of your values rather than a function of the impulse or desire of any given moment. It’s the power to act with integrity to your proactive first creation.
FOUR GENERATIONS OF TIME MANAGEMENT

In Habit 3 we are dealing with many of the questions addressed in the field of life and time management. As a longtime student of this fascinating field, I am personally persuaded that the essence of the best thinking in the area of time management can be captured in a single phrase: Organize and execute around priorities. That phrase represents the evolution of three generations of time management theory, and how to best do it is the focus of a wide variety of approaches and materials.

Personal management has evolved in a pattern similar to many other areas of human endeavor. Major developmental thrusts, or “waves” as Alvin Toffler calls them, follow each other in succession, each adding a vital new dimension. For example, in social development, the agricultural revolution was followed by the industrial revolution, which was followed by the informational revolution. Each succeeding wave created a surge of social and personal progress.

Likewise, in the area of time management, each generation builds on the one before it—each one moves us toward greater control of our lives. The first wave or generation could be characterized by notes and checklists, an effort to give some semblance of recognition and inclusiveness to the many demands placed on our time and energy.

The second generation could be characterized by calendars and appointment books. This wave reflects an attempt to look ahead, to schedule events and activities in the future.

The third generation reflects the current time management field. It adds to those preceding generations the important idea of prioritization, of clarifying values, and of comparing the relative worth of activities based on their relationship to those values. In addition, it focuses on setting goals—specific long-, intermediate-, and short-term targets toward which time and energy would be directed in harmony with values. It also includes the concept of daily planning, of making a specific plan to accomplish those goals and activities determined to be of greatest worth.

While the third generation has made a significant contribution, people have begun to realize that “efficient” scheduling and control of time are often counterproductive. The efficiency focus creates expectations that clash with the opportunities to develop rich relationships, to meet human needs, and to enjoy
spontaneous moments on a daily basis.

As a result, many people have become turned off by time management programs and planners that make them feel too scheduled, too restricted, and they “throw the baby out with the bath water,” reverting to first or second generation techniques to preserve relationships, spontaneity, and quality of life.

But there is an emerging fourth generation that is different in kind. It recognizes that “time management” is really a misnomer—the challenge is not to manage time, but to manage ourselves. Satisfaction is a function of expectation as well as realization. And expectation (and satisfaction) lie in our Circle of Influence.

Rather than focusing on things and time, fourth generation expectations focus on preserving and enhancing relationships and on accomplishing results—in short, on maintaining the P/PC Balance.
QUADRANT II

The essential focus of the fourth generation of management can be captured in the time management matrix diagrammed on the next page. Basically, we spend time in one of four ways.

As you can see, the two factors that define an activity are **urgent** and **important**. **Urgent** means it requires immediate attention. It’s “Now!” Urgent things act on us. A ringing phone is urgent. Most people can’t stand the thought of just allowing the phone to ring.

You could spend hours preparing materials, you could get all dressed up and travel to a person’s office to discuss a particular issue, but if the phone were to ring while you were there, it would generally take precedence over your personal visit.

If you were to phone someone, there aren’t many people who would say, “I’ll get to you in 15 minutes; just hold.” But those same people would probably let you wait in an office for at least that long while they completed a telephone conversation with someone else.

</table>

Urgent matters are usually visible. They press on us; they insist on action. They’re often popular with others. They’re usually right in front of us. And often they are pleasant, easy, fun to do. But so often they are unimportant!
Importance, on the other hand, has to do with results. If something is important, it contributes to your mission, your values, your high priority goals.

We react to urgent matters. Important matters that are not urgent require more initiative, more proactivity. We must act to seize opportunity, to make things happen. If we don’t practice Habit 2, if we don’t have a clear idea of what is important, of the results we desire in our lives, we are easily diverted into responding to the urgent.

Look for a moment at the four quadrants in the time management matrix. Quadrant I is both urgent and important. It deals with significant results that require immediate attention. We usually call the activities in Quadrant I “crises” or “problems.” We all have some Quadrant I activities in our lives. But Quadrant I consumes many people. They are crisis managers, problem-minded people, deadline-driven producers.

As long as you focus on Quadrant I, it keeps getting bigger and bigger until it dominates you. It’s like the pounding surf. A huge problem comes and knocks you down and you’re wiped out. You struggle back up only to face another one that knocks you down and slams you to the ground.

Some people are literally beaten up by problems all day every day. The only relief they have is in escaping to the not important, not urgent activities of Quadrant IV. So when you look at their total matrix, 90 percent of their time is in Quadrant I and most of the remaining 10 percent is in Quadrant IV, with only negligible attention paid to Quadrants II and III. That’s how people who manage their lives by crisis live.

There are other people who spend a great deal of time in “urgent, but not important” Quadrant III, thinking they’re in Quadrant I. They spend most of their time reacting to things that are urgent, assuming they are also important. But the reality is that the urgency of these matters is often based on the priorities and expectations of others.
People who spend time almost exclusively in Quadrants III and IV basically lead irresponsible lives.

Effective people stay out of Quadrants III and IV because, urgent or not, they aren’t important. They also shrink Quadrant I down to size by spending more time in Quadrant II.

Quadrant II is the heart of effective personal management. It deals with things that are not urgent, but are important. It deals with things like building relationships, writing a personal mission statement, long-range planning, exercising, preventive maintenance, preparation—all those things we know we need to do, but somehow seldom get around to doing, because they aren’t urgent.
To paraphrase Peter Drucker, effective people are not problem-minded; they’re opportunity-minded. They feed opportunities and starve problems. They think preventively. They have genuine Quadrant I crises and emergencies that require their immediate attention, but the number is comparatively small. They keep P and PC in balance by focusing on the important, but not urgent, high leverage capacity-building activities of Quadrant II.

With the time management matrix in mind, take a moment now and consider how you answered the questions at the beginning of this chapter. What quadrant do they fit in? Are they important? Are they urgent?

My guess is that they probably fit into Quadrant II. They are obviously important, deeply important, but not urgent. And because they aren’t urgent, you don’t do them.

Now look again at the nature of those questions: What one thing could you do in your personal and professional life that, if you did on a regular basis, would make a tremendous positive difference in your life? Quadrant II activities have that kind of impact. Our effectiveness takes quantum leaps when we do them.

*

I asked a similar question to a group of shopping center managers. “If you were to do one thing in your professional work that you know would have enormously positive effects on the results, what would it be?” Their unanimous response was to build helpful personal relationships with the tenants, the owners of the stores inside the shopping center, which is a Quadrant II activity.

We did an analysis of the time they were spending on that activity. It was less than 5 percent. They had good reasons—problems, one right after another. They
had reports to make out, meetings to go to, correspondence to answer, phone calls to make, constant interruptions. Quadrant I had consumed them.

They were spending very little time with the store managers, and the time they did spend was filled with negative energy. The only reason they visited the store managers at all was to enforce the contract—to collect the money or discuss advertising or other practices that were out of harmony with center guidelines, or some similar thing.

The store owners were struggling for survival, let alone prosperity. They had employment problems, cost problems, inventory problems, and a host of other problems. Most of them had no training in management at all. Some were fairly good merchandisers, but they needed help. The tenants didn’t even want to see the shopping center owners; they were just one more problem to contend with.

So the owners decided to be proactive. They determined their purpose, their values, their priorities. In harmony with those priorities, they decided to spend about one-third of their time in helping relationships with the tenants.

In working with that organization for about a year and a half, I saw them climb to around 20 percent, which represented more than a fourfold increase. In addition, they changed their role. They became listeners, trainers, consultants to the tenants. Their interchanges were filled with positive energy.

The effect was dramatic, profound. By focusing on relationships and results rather than time and methods, the numbers went up, the tenants were thrilled with the results created by new ideas and skills, and the shopping center managers were more effective and satisfied and increased their list of potential tenants and lease revenue based on increased sales by the tenant stores. They were no longer policemen or hovering supervisors. They were problem solvers, helpers.

*  

Whether you are a student at the university, a worker in an assembly line, a homemaker, fashion designer, or president of a company, I believe that if you were to ask what lies in Quadrant II and cultivate the proactivity to go after it, you would find the same results. Your effectiveness would increase dramatically. Your crises and problems would shrink to manageable proportions because you would be thinking ahead, working on the roots, doing the preventive things that keep situations from developing into crises in the first place. In time management jargon, this is called the Pareto Principle—80 percent of the results
flow out of 20 percent of the activities.
**WHAT IT TAKES TO SAY “NO“**

The only place to get time for Quadrant II in the beginning is from Quadrants III and IV. You can’t ignore the urgent and important activities of Quadrant I, although it will shrink in size as you spend more time with prevention and preparation in Quadrant II. But the initial time for Quadrant II has to come out of III and IV.

You have to be proactive to work on Quadrant II because Quadrants I and III work on you. To say “yes” to important Quadrant II priorities, you have to learn to say “no” to other activities, sometimes apparently urgent things.

Some time ago, my wife was invited to serve as chairman of a committee in a community endeavor. She had a number of truly important things she was trying to work on, and she really didn’t want to do it. But she felt pressured into it and finally agreed.

Then she called one of her dear friends to ask if she would serve on her committee. Her friend listened for a long time and then said, “Sandra, that sounds like a wonderful project, a really worthy undertaking. I appreciate so much your inviting me to be a part of it. I feel honored by it. For a number of reasons, I won’t be participating myself, but I want you to know how much I appreciate your invitation.”

Sandra was ready for anything but a pleasant “no.” She turned to me and sighed, “I wish I’d said that.”

I don’t mean to imply that you shouldn’t be involved in significant service projects. Those things are important. But you have to decide what your highest priorities are and have the courage—pleasantly, smilingly, nonapologetically—to say “no” to other things. And the way you do that is by having a bigger “yes” burning inside. The enemy of the “best” is often the “good.”

Keep in mind that you are always saying “no” to something. If it isn’t to the apparent, urgent things in your life, it is probably to the more fundamental, highly important things. Even when the urgent is good, the good can keep you from your best, keep you from your unique contribution, if you let it.
When I was Director of University Relations at a large university, I hired a very talented, proactive, creative writer. One day, after he had been on the job for a few months, I went into his office and asked him to work on some urgent matters that were pressing on me.

He said, “Stephen, I’ll do whatever you want me to do. Just let me share with you my situation.”

Then he took me over to his wallboard, where he had listed over two dozen projects he was working on, together with performance criteria and deadline dates that had been clearly negotiated before. He was highly disciplined, which is why I went to see him in the first place. “If you want to get something done, give it to a busy man.”

Then he said, “Stephen, to do the jobs that you want done right would take several days. Which of these projects would you like me to delay or cancel to satisfy your request?”

Well, I didn’t want to take the responsibility for that. I didn’t want to put a cog in the wheel of one of the most productive people on the staff just because I happened to be managing by crisis at the time. The jobs I wanted done were urgent, but not important. So I went and found another crisis manager and gave the job to him.

We say “yes” or “no” to things daily, usually many times a day. A center of correct principles and a focus on our personal mission empowers us with wisdom to make those judgments effectively.

As I work with different groups, I tell them that the essence of effective time and life management is to organize and execute around balanced priorities. Then I ask this question: if you were to fault yourself in one of three areas, which would it be: (1) the inability to prioritize; (2) the inability or desire to organize around those priorities; or (3) the lack of discipline to execute around them, to stay with your priorities and organization?

Most people say their main fault is a lack of discipline. On deeper thought, I believe that is not the case. The basic problem is that their priorities have not become deeply planted in their hearts and minds. They haven’t really internalized Habit 2.

There are many people who recognize the value of Quadrant II activities in their lives, whether they identify them as such or not. And they attempt to give priority to those activities and integrate them into their lives through self-discipline alone. But without a principle center and a personal mission statement, they don’t have the necessary foundation to sustain their efforts. They’re
working on the leaves, on the attitudes and the behaviors of discipline, without even thinking to examine the roots, the basic paradigms from which their natural attitudes and behaviors flow.

A Quadrant II focus is a paradigm that grows out of a principle center. If you are centered on your spouse, your money, your friends, your pleasure, or any extrinsic factor, you will keep getting thrown back into Quadrants I and III, reacting to the outside forces your life is centered on. Even if you’re centered on yourself, you’ll end up in I and III reacting to the impulse of the moment. Your independent will alone cannot effectively discipline you against your center.

In the words of the architectural maxim, form follows function. Likewise, management follows leadership. The way you spend your time is a result of the way you see your time and the way you really see your priorities. If your priorities grow out of a principle center and a personal mission, if they are deeply planted in your heart and in your mind, you will see Quadrant II as a natural, exciting place to invest your time.

It’s almost impossible to say “no” to the popularity of Quadrant III or to the pleasure of escape to Quadrant IV if you don’t have a bigger “yes” burning inside. Only when you have the self-awareness to examine your program—and the imagination and conscience to create a new, unique, principle-centered program to which you can say “yes”—only then will you have sufficient independent will power to say “no,” with a genuine smile, to the unimportant.
MOVING INTO QUADRANT II

If Quadrant II activities are clearly the heart of effective personal management—the “first things” we need to put first—then how do we organize and execute around those things?

The first generation of time management does not even recognize the concept of priority. It gives us notes and “to do” lists that we can cross off, and we feel a temporary sense of accomplishment every time we check something off, but no priority is attached to items on the list. In addition, there is no correlation between what’s on the list and our ultimate values and purposes in life. We simply respond to whatever penetrates our awareness and apparently needs to be done.

Many people manage from this first-generation paradigm. It’s the course of least resistance. There’s no pain or strain; it’s fun to “go with the flow.” Externally imposed disciplines and schedules give people the feeling that they aren’t responsible for results.

But first-generation managers, by definition, are not effective people. They produce very little, and their life-style does nothing to build their production capability. Buffeted by outside forces, they are often seen as undependable and irresponsible, and they have very little sense of control and self-esteem.

Second-generation managers assume a little more control. They plan and schedule in advance and generally are seen as more responsible because they “show up” when they’re supposed to.

But again, the activities they schedule have no priority or recognized correlation to deeper values and goals. They have few significant achievements and tend to be schedule oriented.

Third-generation managers take a significant step forward. They clarify their values and set goals. They plan each day and prioritize their activities.

As I have said, this is where most of the time management field is today. But this third generation has some critical limitations. First, it limits vision—daily planning often misses important things that can only be seen from a larger perspective. The very language “daily planning” focuses on the urgent—the “now.” While third generation prioritization provides order to activity, it doesn’t question the essential importance of the activity in the first place—it doesn’t place the activity in the context of principles, personal mission, roles, and goals.
The third-generation value-driven daily planning approach basically prioritizes the Quadrant I and III problems and crises of the day.

In addition, the third generation makes no provision for managing roles in a balanced way. It lacks realism, creating the tendency to over-schedule the day, resulting in frustration and the desire to occasionally throw away the plan and escape to Quadrant IV. And its efficiency, time management focus tends to strain relationships rather than build them.

While each of the three generations has recognized the value of some kind of management tool, none has produced a tool that empowers a person to live a principle-centered, Quadrant II life-style. The first-generation notepads and “to do” lists give us no more than a place to capture those things that penetrate our awareness so we won’t forget them. The second-generation appointment books and calendars merely provide a place to record our future commitments so that we can be where we have agreed to be at the appropriate time.

Even the third generation, with its vast array of planners and materials, focuses primarily on helping people prioritize and plan their Quadrants I and III activities. Though many trainers and consultants recognize the value of Quadrant II activities, the actual planning tools of the third generation do not facilitate organizing and executing around them.

As each generation builds on those that have preceded it, the strengths and some of the tools of each of the first three generations provide elemental material for the fourth. But there is an added need for a new dimension, for the paradigm and the implementation that will empower us to move into Quadrant II, to become principle-centered and to manage ourselves to do what is truly most important.
**THE QUADRANT II TOOL**

The objective of Quadrant II management is to manage our lives effectively—from a center of sound principles, from a knowledge of our personal mission, with a focus on the important as well as the urgent, and within the framework of maintaining a balance between increasing our production and increasing our production capability.

This is, admittedly, an ambitious objective for people caught in the thick of thin things in Quadrants III and IV. But striving to achieve it will have a phenomenal impact on personal effectiveness.

A Quadrant II organizer will need to meet six important criteria.

**COHERENCE.** Coherence suggests that there is harmony, unity, and integrity between your vision and mission, your roles and goals, your priorities and plans, and your desires and discipline. In your planner, there should be a place for your personal mission statement so that you can constantly refer to it. There also needs to be a place for your roles and for both short-and long-term goals.

**BALANCE.** Your tool should help you to keep balance in your life, to identify your various roles and keep them right in front of you, so that you don’t neglect important areas such as your health, your family, professional preparation, or personal development.

Many people seem to think that success in one area can compensate for failure in other areas of life. But can it really?

Perhaps it can for a limited time in some areas. But can success in your profession compensate for a broken marriage, ruined health, or weakness in personal character? True effectiveness requires balance, and your tool needs to help you create and maintain it.

**QUADRANT II FOCUS.** You need a tool that encourages you, motivates you, actually helps you spend the time you need in Quadrant II, so that you’re dealing with prevention rather than prioritizing crises. In my opinion, the best way to do this is to organize your life on a *weekly* basis. You can still adapt and prioritize
on a daily basis, but the fundamental thrust is organizing the week.

Organizing on a weekly basis provides much greater balance and context than daily planning. There seems to be implicit cultural recognition of the week as a single, complete unit of time. Business, education, and many other facets of society operate within the framework of the week, designating certain days for focused investment and others for relaxation or inspiration. The basic Judeo-Christian ethic honors the Sabbath, the one day out of every seven set aside for uplifting purposes.

Most people think in terms of weeks. But most third-generation planning tools focus on daily planning. While they may help you prioritize your activities, they basically only help you organize crises and busywork. The key is not to prioritize what’s on your schedule, but to schedule your priorities. And this can best be done in the context of the week.

A “People“ Dimension. You also need a tool that deals with people, not just schedules. While you can think in terms of efficiency in dealing with time, a principle-centered person thinks in terms of effectiveness in dealing with people. There are times when principle-centered Quadrant II living requires the subordination of schedules to people. Your tool needs to reflect that value, to facilitate implementation rather than create guilt when a schedule is not followed.

Flexibility. Your planning tool should be your servant, never your master. Since it has to work for you, it should be tailored to your style, your needs, your particular ways.

Portability. Your tool should also be portable, so that you can carry it with you most of the time. You may want to review your personal mission statement while riding the bus. You may want to measure the value of a new opportunity against something you already have planned. If your organizer is portable, you will keep it with you so that important data is always within reach.

Since Quadrant II is the heart of effective self-management, you need a tool that moves you into Quadrant II. My work with the fourth-generation concept has led to the creation of a tool specifically designed according to the criteria listed above. But many good third-generation tools can easily be adapted.
Because the principles are sound, the practices or specific applications can vary from one individual to the next.
BECOMING A QUADRANT II SELF-MANAGER

Although my effort here is to teach principles, not practices, of effectiveness, I believe you can better understand the principles and the empowering nature of the fourth generation if you actually experience organizing a week from a principle-centered, Quadrant II base.

Quadrant II organizing involves four key activities.

IDENTIFYING ROLES. The first task is to write down your key roles. If you haven’t really given serious thought to the roles in your life, you can write down what immediately comes to mind. You have a role as an individual. You may want to list one or more roles as a family member—a husband or wife, mother or father, son or daughter, a member of the extended family of grandparents, aunts, uncles, and cousins. You may want to list a few roles in your work, indicating different areas in which you wish to invest time and energy on a regular basis. You may have roles in church or community affairs.

You don’t need to worry about defining the roles in a way that you will live with for the rest of your life—just consider the week and write down the areas you see yourself spending time in during the next seven days.

Here are two examples of the way people might see their various roles.

1. Individual
2. Spouse/Parent
3. Manager New Products
4. Manager Research
5. Manager Staff Dev.
6. Manager Administration
7. Chairman United Way

1. Personal Development
2. Spouse
3. Parent
4. Real Estate Salesperson
5. Community Service
6. Symphony Board Member
SELECTING GOALS. The next step is to think of one or two important results you feel you should accomplish in each role during the next seven days. These would be recorded as goals. (See next page.)

At least some of these goals should reflect Quadrant II activities. Ideally, these weekly goals would be tied to the longer-term goals you have identified in conjunction with your personal mission statement. But even if you haven’t written your mission statement, you can get a feeling, a sense, of what is important as you consider each of your roles and one or two goals for each role.

SCHEDULING. Now you can look at the week ahead with your goals in mind and schedule time to achieve them. For example, if your goal is to produce the first draft of your personal mission statement, you may want to set aside a two-hour block of time on Sunday to work on it. Sunday (or some other day of the week that is special to you, your faith, or your circumstances) is often the ideal time to plan your more personally uplifting activities, including weekly organizing. It’s a good time to draw back, to seek inspiration, to look at your life in the context of principles and values.

If you set a goal to become physically fit through exercise, you may want to set aside an hour three or four days during the week, or possibly every day during the week, to accomplish that goal. There are some goals that you may only be able to accomplish during business hours, or some that you can only do on Saturday when your children are home. Can you begin to see some of the advantages of organizing the week instead of the day?

Having identified roles and set goals, you can translate each goal to a specific day of the week, either as a priority item or, even better, as a specific appointment. You can also check your annual or monthly calendar for any appointments you may have previously made and evaluate their importance in the context of your goals, transferring those you decide to keep to your schedule and making plans to reschedule or cancel others.
As you study the following weekly schedule, observe how each of the nineteen most important, often Quadrant II, goals has been scheduled or translated into a specific action plan. In addition, notice the box labeled “Sharpen the Saw” that provides a place to plan vital renewing Quadrant II activities in each of the four human dimensions that will be explained in Habit 7.

Even with time set aside to accomplish 19 important goals during the week, look at the amount of remaining unscheduled space on the schedule! As well as empowering you to put first things first, Quadrant II weekly organizing gives you the freedom and the flexibility to handle unanticipated events, to shift appointments if you need to, to savor relationships and interactions with others, to deeply enjoy spontaneous experiences, knowing that you have proactively organized your week to accomplish key goals in every area of your life.
DAILY ADAPTING. With Quadrant II weekly organizing, daily planning becomes more a function of daily adapting, of prioritizing activities and responding to unanticipated events, relationships, and experiences in a meaningful way.

Taking a few minutes each morning to review your schedule can put you in touch with the value-based decisions you made as you organized the week as well as unanticipated factors that may have come up. As you overview the day, you can see that your roles and goals provide a natural prioritization that grows out of your innate sense of balance. It is a softer, more right-brain prioritization that ultimately comes out of your sense of personal mission.

You may still find that the third-generation A, B, C or 1, 2, 3 prioritization gives needed order to daily activities. It would be a false dichotomy to say that activities are either important or they aren’t. They are obviously on a continuum, and some important activities are more important than others. In the context of weekly organizing, third-generation prioritization gives order to daily focus.

But trying to prioritize activities before you even know how they relate to your sense of personal mission and how they fit into the balance of your life is not effective. You may be prioritizing and accomplishing things you don’t want or need to be doing at all.

**Mission Statement** ➔ **Roles** ➔ **Goals**
LONG-TERM ORGANIZING

WEEKLY ORGANIZING

Can you begin to see the difference between organizing your week as a principle-centered, Quadrant II manager and planning your days as an individual centered on something else? Can you begin to sense the tremendous difference the Quadrant II focus would make in your current level of effectiveness?

Having experienced the power of principle-centered Quadrant II organizing in my own life and having seen it transform the lives of hundreds of other people, I am persuaded it makes a difference—a quantum positive difference. And the more completely weekly goals are tied into a wider framework of correct principles and into a personal mission statement, the greater the increase in effectiveness will be.
**LIVING IT**

Returning once more to the computer metaphor, if Habit 1 says “You’re the programmer” and Habit 2 says “Write the program,” then Habit 3 says “Run the program,” “Live the program.” And living it is primarily a function of our independent will, our self-discipline, our integrity, and commitment—not to short-term goals and schedules or to the impulse of the moment, but to the correct principles and our own deepest values, which give meaning and context to our goals, our schedules, and our lives.

As you go through your week, there will undoubtedly be times when your integrity will be placed on the line. The popularity of reacting to the urgent but unimportant priorities of other people in Quadrant III or the pleasure of escaping to Quadrant IV will threaten to overpower the important Quadrant II activities you have planned. Your principle center, your self-awareness, and your conscience can provide a high degree of intrinsic security, guidance, and wisdom to empower you to use your independent will and maintain integrity to the truly important.

But because you aren’t omniscient, you can’t always know in advance what is truly important. As carefully as you organize the week, there will be times when, as a principle-centered person, you will need to subordinate your schedule to a higher value. Because you are principle-centered, you can do that with an inner sense of peace.

At one point, one of my sons was deeply into scheduling and efficiency. One day he had a very tight schedule, which included down-to-the-minute time allocations for every activity, including picking up some books, washing his car, and “dropping” Carol, his girlfriend, among other things.

Everything went according to schedule until it came to Carol. They had been dating for a long period of time, and he had finally come to the conclusion that a continued relationship would not work out. So, congruent with his efficiency model, he had scheduled a ten-to fifteen-minute telephone call to tell her.

But the news was very traumatic to her. One-and-a-half hours later, he was still deeply involved in a very intense conversation with her. Even then, the one visit was not enough. The situation was a very frustrating experience for them.
both.

Again, you simply can’t think efficiency with people. You think effectiveness with people and efficiency with things. I’ve tried to be “efficient” with a disagreeing or disagreeable person and it simply doesn’t work. I’ve tried to give ten minutes of “quality time” to a child or an employee to solve a problem, only to discover such “efficiency” creates new problems and seldom resolves the deepest concern.

I see many parents, particularly mothers with small children, often frustrated in their desire to accomplish a lot because all they seem to do is meet the needs of little children all day. Remember, frustration is a function of our expectations, and our expectations are often a reflection of the social mirror rather than our own values and priorities.

But if you have Habit 2 deep inside your heart and mind, you have those higher values driving you. You can subordinate your schedule to those values with integrity. You can adapt; you can be flexible. You don’t feel guilty when you don’t meet your schedule or when you have to change it.
ADVANCES OF THE FOURTH GENERATION

One of the reasons why people resist using third-generation time management tools is because they lose spontaneity; they become rigid and inflexible. They subordinate people to schedules because the efficiency paradigm of the third generation of management is out of harmony with the principle that people are more important than things.

The fourth-generation tool recognizes that principle. It also recognizes that the first person you need to consider in terms of effectiveness rather than efficiency is yourself. It encourages you to spend time in Quadrant II, to understand and center your life on principles, to give clear expression to the purposes and values you want to direct your daily decisions. It helps you to create balance in your life. It helps you rise above the limitations of daily planning and organize and schedule in the context of the week. And when a higher value conflicts with what you have planned, it empowers you to use your self-awareness and your conscience to maintain integrity to the principles and purposes you have determined are most important. Instead of using a road map, you’re using a compass.

The fourth generation of self-management is more advanced than the third in five important ways.

First, it’s principle-centered. More than giving lip service to Quadrant II, it creates the central paradigm that empowers you to see your time in the context of what is really important and effective.

Second, it’s conscience-directed. It gives you the opportunity to organize your life to the best of your ability in harmony with your deepest values. But it also gives you the freedom to peacefully subordinate your schedule to higher values.

Third, it defines your unique mission, including values and long-term goals. This gives direction and purpose to the way you spend each day.

Fourth, it helps you balance your life by identifying roles, and by setting goals and scheduling activities in each key role every week.

And fifth, it gives greater context through weekly organizing (with daily adaptation as needed), rising above the limiting perspective of a single day and putting you in touch with your deepest values through review of your key roles.

The practical thread running through all five of these advances is a primary focus on relationships and results and a secondary focus on time.
DELEGATION: INCREASING P AND PC

We accomplish all that we do through delegation—either to time or to other people. If we delegate to time, we think efficiency. If we delegate to other people, we think effectiveness.

Many people refuse to delegate to other people because they feel it takes too much time and effort and they could do the job better themselves. But effectively delegating to others is perhaps the single most powerful high-leverage activity there is.

Transferring responsibility to other skilled and trained people enables you to give your energies to other high-leverage activities. Delegation means growth, both for individuals and for organizations. The late J. C. Penney was quoted as saying that the wisest decision he ever made was to “let go” after realizing that he couldn’t do it all by himself any longer. That decision, made long ago, enabled the development and growth of hundreds of stores and thousands of people.

Because delegation involves other people, it is a Public Victory and could well be included in Habit 4. But because we are focusing here on principles of personal management, and the ability to delegate to others is the main difference between the role of manager and independent producer, I am approaching delegation from the standpoint of your personal managerial skills.

A producer does whatever is necessary to accomplish desired results, to get the golden eggs. A parent who washes the dishes, an architect who draws up blueprints, or a secretary who types correspondence is a producer.

But when a person sets up and works with and through people and systems to produce golden eggs, that person becomes a manager in the interdependent sense. A parent who delegates washing the dishes to a child is a manager. An architect who heads a team of other architects is a manager. A secretary who supervises other secretaries and office personnel is an office manager.

A producer can invest one hour of effort and produce one unit of results, assuming no loss of efficiency.
A manager, on the other hand, can invest one hour of effort and produce ten or fifty or a hundred units through effective delegation.

Management is essentially moving the fulcrum over, and the key to effective management is delegation.
**Gofer Delegation**

There are basically two kinds of delegation: “gofer delegation” and “stewardship delegation.” Gofer delegation means “Go for this, go for that, do this, do that, and tell me when it’s done.” Most people who are producers have a gofer delegation paradigm. Remember the machete wielders in the jungle? They are the producers. They roll up their sleeves and get the job done. If they are given a position of supervision or management, they still think like producers. They don’t know how to set up a full delegation so that another person is committed to achieve results. Because they are focused on methods, they become responsible for the results.

I was involved in a gofer delegation once when our family went water skiing. My son, who is an excellent skier, was in the water being pulled and I was driving the boat. I handed the camera to Sandra and asked her to take some pictures.

At first, I told her to be selective in her picture taking because we didn’t have much film left. Then I realized she was unfamiliar with the camera, so I became a little more specific. I told her to be sure to wait until the sun was ahead of the boat and until our son was jumping the wake or making a turn and touching his elbow.

But the more I thought about our limited footage and her inexperience with the camera, the more concerned I became. I finally said, “Look, Sandra, just push the button when I tell you. Okay?” And I spent the next few minutes yelling, “Take it!—Take it!—Don’t take it!—Don’t take it!” I was afraid that if I didn’t direct her every move every second, it wouldn’t be done right.

That was true gofer delegation, one-on-one supervision of methods. Many people consistently delegate that way. But how much does it really accomplish? And how many people is it possible to supervise or manage when you have to be involved in every move they make?

There’s a much better way, a more effective way to delegate to other people. And it’s based on a paradigm of appreciation of the self-awareness, the imagination, the conscience, and the free will of other people.
Stewardship Delegation

Stewardship delegation is focused on results instead of methods. It gives people a choice of method and makes them responsible for results. It takes more time in the beginning, but it’s time well invested. You can move the fulcrum over, you can increase your leverage, through stewardship delegation.

Stewardship delegation involves clear, up-front mutual understanding and commitment regarding expectations in five areas.

**Desired Results.** Create a clear, mutual understanding of what needs to be accomplished, focusing on what, not how; results, not methods. Spend time. Be patient. Visualize the desired result. Have the person see it, describe it, make out a quality statement of what the results will look like, and by when they will be accomplished.

**Guidelines.** Identify the parameters within which the individual should operate. These should be as few as possible to avoid methods delegation, but should include any formidable restrictions. You wouldn’t want a person to think he had considerable latitude as long as he accomplished the objectives, only to violate some long-standing traditional practice or value. That kills initiative and sends people back to the gofer’s creed: “Just tell me what you want me to do, and I’ll do it.”

If you know the failure paths of the job, identify them. Be honest and open—tell a person where the quicksand is and where the wild animals are. You don’t want to have to reinvent the wheel every day. Let people learn from your mistakes or the mistakes of others. Point out the potential failure paths, what not to do, but don’t tell them what to do. Keep the responsibility for results with them—to do whatever is necessary within the guidelines.

**Resources.** Identify the human, financial, technical, or organizational resources the person can draw on to accomplish the desired results.
ACCOUNTABILITY. Set up the standards of performance that will be used in evaluating the results and the specific times when reporting and evaluation will take place.

CONSEQUENCES. Specify what will happen, both good and bad, as a result of the evaluation. This could include such things as financial rewards, psychic rewards, different job assignments, and natural consequences tied into the overall mission of an organization.

Some years ago, I had an interesting experience in delegation with one of my sons. We were having a family meeting, and we had our mission statement up on the wall to make sure our plans were in harmony with our values. Everybody was there.

I set up a big blackboard and we wrote down our goals—the key things we wanted to do—and the jobs that flowed out of those goals. Then I asked for volunteers to do the job.

“Who wants to pay the mortgage?” I asked. I noticed I was the only one with my hand up.

“Who wants to pay for the insurance? The food? The cars?” I seemed to have a real monopoly on the opportunities.

“Who wants to feed the new baby?” There was more interest here, but my wife was the only one with the right qualifications for the job.

As we went down the list, job by job, it was soon evident that Mom and Dad had more than sixty-hour work weeks. With that paradigm in mind, some of the other jobs took on a more proper perspective.

My seven-year-old son, Stephen, volunteered to take care of the yard. Before I actually gave him the job, I began a thorough training process. I wanted him to have a clear picture in his mind of what a well cared for yard was like, so I took him next door to our neighbor’s.

“Look, son,” I said. “See how our neighbor’s yard is green and clean? That’s what we’re after: green and clean. Now come look at our yard. See the mixed colors? That’s not it; that’s not green. Green and clean is what we want. Now how you get it green is up to you. You’re free to do it any way you want, except paint it. But I’ll tell you how I’d do it if it were up to me.”

“How would you do it, Dad?”

“I’d turn on the sprinklers. But you may want to use buckets or a hose. It makes no difference to me. All we care about is that the color is green. Okay?”
“Okay.”

“Now let’s talk about ‘clean,’ Son. Clean means no messes around—no paper, strings, bones, sticks, or anything that messes up the place. I’ll tell you what let’s do. Let’s just clean up half the yard right now and look at the difference.”

So we got out two paper sacks and picked up one side of the yard. “Now look at this side. Look at the other side. See the difference? That’s called clean.”

“Wait!” he called. “I see some paper behind that bush!”

“Oh, good! I didn’t notice that newspaper back there. You have good eyes, Son.

“Now before you decide whether or not you’re going to take the job, let me tell you a few more things. Because when you take the job, I don’t do it anymore. It’s your job. It’s called a stewardship. Stewardship means ‘a job with a trust.’ I trust you to do the job, to get it done. Now who’s going to be your boss?”

“You, Dad?”

“No, not me. You’re the boss. You boss yourself. How do you like Mom and Dad nagging you all the time?”

“I don’t.”

“We don’t like doing it either. It sometimes causes a bad feeling, doesn’t it? So you boss yourself. Now, guess who your helper is.”

“Who?”

“I am,” I said. “You boss me.”

“I do?”

“That’s right. But my time to help is limited. Sometimes I’m away. But when I’m here, you tell me how I can help. I’ll do anything you want me to do.”

“Okay!”

“Now guess who judges you.”

“Who?”

“You judge yourself.”

“I do?”

“That’s right. Twice a week the two of us will walk around the yard, and you can show me how it’s coming. How are you going to judge?”

“Green and clean.”

“Right!”

I trained him with those two words for two weeks before I felt he was ready to take the job. Finally, the big day came.

“Is it a deal, Son?”

“It’s a deal.”

“What’s the job?”
“Green and clean.”
“What’s green?”
He looked at our yard, which was beginning to look better. Then he pointed next door. “That’s the color of his yard.”
“What’s clean?”
“No messes.”
“Who’s the boss?”
“I am.”
“Who’s your helper?”
“You are, when you have time.”
“Who’s the judge?”
“I am. We’ll walk around two times a week and I can show you how it’s coming.”
“And what will we look for?”
“Green and clean.”
At that time I didn’t mention an allowance. But I wouldn’t hesitate to attach an allowance to such a stewardship.
Two weeks and two words. I thought he was ready.
It was Saturday. And he did nothing. Sunday … nothing. Monday … nothing. As I pulled out of the driveway on my way to work on Tuesday, I looked at the yellow, cluttered yard and the hot July sun on its way up. “Surely he’ll do it today,” I thought. I could rationalize Saturday because that was the day we made the agreement. I could rationalize Sunday; Sunday was for other things. But I couldn’t rationalize Monday. And now it was Tuesday. Certainly he’d do it today. It was summertime. What else did he have to do?
All day I could hardly wait to return home to see what happened. As I rounded the corner, I was met with the same picture I left that morning. And there was my son at the park across the street playing.
This was not acceptable. I was upset and disillusioned by his performance after two weeks of training and all those commitments. We had a lot of effort, pride, and money invested in the yard and I could see it going down the drain. Besides, my neighbor’s yard was manicured and beautiful, and the situation was beginning to get embarrassing.
I was ready to go back to gofer delegation. Son, you get over here and pick up this garbage right now or else! I knew I could get the golden egg that way. But what about the goose? What would happen to his internal commitment?
So I faked a smile and yelled across the street, “Hi, Son. How’s it going?”
“Fine!” he returned.
“How’s the yard coming?” I knew the minute I said it I had broken our
agreement. That’s not the way we had set up an accounting. That’s not what we
had agreed.

So he felt justified in breaking it, too. “Fine, Dad.”

I bit my tongue and waited until after dinner. Then I said, “Son, let’s do as we
agreed. Let’s walk around the yard together and you can show me how it’s going
in your stewardship.”

As we started out the door, his chin began to quiver. Tears welled up in his
eyes and, by the time we got out to the middle of the yard, he was whimpering.

“It’s so hard, Dad!”

What’s so hard? I thought to myself. You haven’t done a single thing! But I
knew what was hard—self-management, self-supervision. So I said, “Is there
anything I can do to help?”

“Would you, Dad?” he sniffed.

“What was our agreement?”

“You said you’d help me if you had time.”

“I have time.”

So he ran into the house and came back with two sacks. He handed me one.

“Will you pick that stuff up?” He pointed to the garbage from Saturday night’s
barbecue. “It makes me sick!”

So I did. I did exactly what he asked me to do. And that was when he signed
the agreement in his heart. It became his yard, his stewardship.

He only asked for help two or three more times that entire summer. He took
care of that yard. He kept it greener and cleaner than it had ever been under my
stewardship. He even reprimanded his brothers and sisters if they left so much as
a gum wrapper on the lawn.

Trust is the highest form of human motivation. It brings out the very best in
people. But it takes time and patience, and it doesn’t preclude the necessity to
train and develop people so that their competency can rise to the level of that
trust.

I am convinced that if stewardship delegation is done correctly, both parties
will benefit and ultimately much more work will get done in much less time. I
believe that a family that is well organized, whose time has been spent
effectively delegating on a one-on-one basis, can organize the work so that
everyone can do everything in about an hour a day. But that takes the internal
capacity to want to manage, not just to produce. The focus is on effectiveness,
not efficiency.

Certainly you can pick up that room better than a child, but the key is that you
want to empower the child to do it. It takes time. You have to get involved in the training and development. It takes time, but how valuable that time is downstream! It saves you so much in the long run.

This approach involves an entirely new paradigm of delegation. In effect, it changes the nature of the relationship: The steward becomes his own boss, governed by a conscience that contains the commitment to agreed upon desired results. But it also releases his creative energies toward doing whatever is necessary in harmony with correct principles to achieve those desired results.

The principles involved in stewardship delegation are correct and applicable to any kind of person or situation. With immature people, you specify fewer desired results and more guidelines, identify more resources, conduct more frequent accountability interviews, and apply more immediate consequences. With more mature people, you have more challenging desired results, fewer guidelines, less frequent accountability, and less measurable but more discernable criteria.

Effective delegation is perhaps the best indicator of effective management simply because it is so basic to both personal and organizational growth.
THE QUADRANT II PARADIGM

The key to effective management of self, or of others through delegation, is not in any technique or tool or extrinsic factor. It is intrinsic—in the Quadrant II paradigm that empowers you to see through the lens of importance rather than urgency.

I have included in the Appendix an exercise called “A Quadrant II Day at the Office” which will enable you to see in a business setting how powerfully this paradigm can impact your effectiveness.*

As you work to develop a Quadrant II paradigm, you will increase your ability to organize and execute every week of your life around your deepest priorities, to walk your talk. You will not be dependent on any other person or thing for the effective management of your life.

Interestingly, every one of the Seven Habits is in Quadrant II. Every one deals with fundamentally important things that, if done on a regular basis, would make a tremendous positive difference in our lives.
**Application Suggestions:**

1. Identify a Quadrant II activity you know has been neglected in your life—one that, if done well, would have a significant impact.

in your life, either personally or professionally. Write it down and commit to implement it.

2. Draw a time management matrix and try to estimate what percentage of your time you spend in each quadrant. Then log your time for three days in fifteen-minute intervals. How accurate was your estimate? Are you satisfied with the way you spend your time? What do you need to change?

3. Make a list of responsibilities you could delegate and the people you could delegate to or train to be responsible in these areas. Determine what is

needed to start the process of delegation or training.

4. Organize your next week.* Start by writing down your roles and goals for the week, then transfer the goals to a specific action plan. At the end of the week, evaluate how well your plan translated your deep values and purposes into your daily life and the degree of integrity you were able to maintain to those values and purposes.

5. Commit yourself to start organizing on a weekly basis and set up a regular time to do it.

6. Either convert your current planning tool into a fourth generation; tool or secure such a tool.

7. Go through “A Quadrant II Day at the Office” (Appendix B) for a more in-depth understanding of the impact of a Quadrant II paradigm.

* Please refer to Appendix B.

* On the previous pages is a sample weekly schedule from the Seven Habits Organizer. If you would like samples of these schedules (which you can adapt to your current system), please call 1-800-255-0777 or visit our Internet home page at http://www.franklincovey.com. These schedules are also a feature of Microsoft Schedule + with Seven Habits.
Part Three

PUBLIC VICTORY
PARADIGMS OF INTERDEPENDENCE

There can be no friendship without confidence, and no confidence without integrity.

SAMUEL JOHNSON

BEFORE MOVING INTO THE AREA OF PUBLIC VICTORY, we should remember that effective interdependence can only be built on a foundation of true independence. Private Victory precedes Public Victory. Algebra comes before calculus.

As we look back and survey the terrain to determine where we’ve been and where we are in relationship to where we’re going, we clearly see that we could not have gotten where we are without coming the way we came. There aren’t any other roads; there aren’t any shortcuts. There’s no way to parachute into this terrain. The landscape ahead is covered with the fragments of broken relationships of people who have tried. They’ve tried to jump into effective relationships without the maturity, the strength of character, to maintain them.

But you just can’t do it; you simply have to travel the road. You can’t be successful with other people if you haven’t paid the price of success with yourself.
A few years ago when I was giving a seminar on the Oregon coast, a man came up to me and said, “You know, Stephen, I really don’t enjoy coming to these seminars.” He had my attention.

“Look at everyone else here,” he continued. “Look at this beautiful coastline and the sea out there and all that’s happening. And all I can do is sit and worry about the grilling I’m going to get from my wife tonight on the phone.

“She gives me the third degree every time I’m away. Where did I eat breakfast? Who else was there? Was I in meetings all morning? When did we stop for lunch? What did I do during lunch? How did I spend the afternoon? What did I do for entertainment in the evening? Who was with me? What did we talk about?

“And what she really wants to know, but never quite asks, is who she can call to verify everything I tell her. She just nags me and questions everything I do whenever I’m away. It’s taken the bloom out of this whole experience. I really don’t enjoy it at all.”

He did look pretty miserable. We talked for a while, and then he made a very interesting comment. “I guess she knows all the questions to ask,” he said a little sheepishly. “It was at a seminar like this that I met her … when I was married to someone else!”

I considered the implications of his comment and then said, “You’re kind of into ‘quick fix,’ aren’t you?”

“What do you mean?” he replied.

“Well, you’d like to take a screwdriver and just open up your wife’s head and rewire that attitude of hers really fast, wouldn’t you?”

“Sure, I’d like her to change,” he exclaimed. “I don’t think it’s right for her to constantly grill me like she does.”

“My friend,” I said, “you can’t talk your way out of problems you behave yourself into.”
We’re dealing with a very dramatic and very fundamental paradigm shift here. You may try to lubricate your social interactions with personality techniques and skills, but in the process, you may truncate the vital character base. You can’t have the fruits without the roots. It’s the principle of sequencing: Private Victory precedes Public Victory. Self-mastery and self-discipline are the foundation of good relationships with others.

Some people say that you have to like yourself before you can like others. I think that idea has merit, but if you don’t know yourself, if you don’t control yourself, if you don’t have mastery over yourself, it’s very hard to like yourself, except in some short-term, psych-up, superficial way.

Real self-respect comes from dominion over self, from true independence. And that’s the focus of Habits 1, 2, and 3. Independence is an achievement. Interdependence is a choice only independent people can make. Unless we are willing to achieve real independence, it’s foolish to try to develop human relations skills. We might try. We might even have some degree of success when the sun is shining. But when the difficult times come—and they will—we won’t have the foundation to keep things together.

The most important ingredient we put into any relationship is not what we say or what we do, but what we are. And if our words and our actions come from superficial human relations techniques (the Personality Ethic) rather than from our own inner core (the Character Ethic), others will sense that duplicity. We simply won’t be able to create and sustain the foundation necessary for effective interdependence.

The techniques and skills that really make a difference in human interaction are the ones that almost naturally flow from a truly independent character. So the place to begin building any relationship is inside ourselves, inside our Circle of Influence, our own character. As we become independent—proactive, centered in correct principles, value driven and able to organize and execute around the priorities in our life with integrity—we then can choose to become interdependent—capable of building rich, enduring, highly productive relationships
with other people.

As we look at the terrain ahead, we see that we’re entering a whole new dimension. Interdependence opens up worlds of possibilities for deep, rich, meaningful associations, for geometrically increased productivity, for serving, for contributing, for learning, for growing. But it is also where we feel the greatest pain, the greatest frustration, the greatest roadblocks to happiness and success. And we’re very aware of that pain because it is acute.

We can often live for years with the chronic pain of our lack of vision, leadership or management in our personal lives. We feel vaguely uneasy and uncomfortable and occasionally take steps to ease the pain, at least for a time. Because the pain is chronic, we get used to it, we learn to live with it.

But when we have problems in our interactions with other people, we’re very aware of acute pain—it’s often intense, and we want it to go away.

That’s when we try to treat the symptoms with quick fixes and techniques—the band-aids of the Personality Ethic. We don’t understand that the acute pain is an outgrowth of the deeper, chronic problem. And until we stop treating the symptoms and start treating the problem, our efforts will only bring counterproductive results. We will only be successful at obscuring the chronic pain even more.

Now, as we think of effective interaction with others, let’s go back to our earlier definition of effectiveness. We’ve said it’s the P/PC balance, the fundamental concept in the story of the goose and the golden egg.

In an interdependent situation, the golden eggs are the effectiveness, the wonderful synergy, the results created by open communication and positive interaction with others. And to get those eggs on a regular basis, we need to take care of the goose. We need to create and care for the relationships that make those results realities.

So before we descend from our point of reconnaissance and get into Habits 4, 5, and 6, I would like to introduce what I believe to be a very
powerful metaphor in describing relationships and in defining the P/PC balance in an interdependent reality.
THE EMOTIONAL BANK ACCOUNT

We all know what a financial bank account is. We make deposits into it and build up a reserve from which we can make withdrawals when we need to. An Emotional Bank Account is a metaphor that describes the amount of trust that’s been built up in a relationship. It’s the feeling of safeness you have with another human being.

If I make deposits into an Emotional Bank Account with you through courtesy, kindness, honesty, and keeping my commitments to you, I build up a reserve. Your trust toward me becomes higher, and I can call upon that trust many times if I need to. I can even make mistakes and that trust level, that emotional reserve, will compensate for it. My communication may not be clear, but you’ll get my meaning anyway. You won’t make me “an offender for a word.” When the trust account is high, communication is easy, instant, and effective.

But if I have a habit of showing discourtesy, disrespect, cutting you off, overreacting, ignoring you, becoming arbitrary, betraying your trust, threatening you, or playing little tin god in your life, eventually my Emotional Bank Account is overdrawn. The trust level gets very low. Then what flexibility do I have?

None. I’m walking on mine fields. I have to be very careful of everything I say. I measure every word. It’s tension city, memo haven. It’s protecting my backside, politicking. And many organizations are filled with it. Many families are filled with it. Many marriages are filled with it.

If a large reserve of trust is not sustained by continuing deposits, a marriage will deteriorate. Instead of rich, spontaneous understanding and communication, the situation becomes one of accommodation, where two people simply attempt to live independent life-styles in a fairly respectful and tolerant way. The relationship may further deteriorate to one of hostility and defensiveness. The “fight or flight” response creates verbal battles, slammed doors, refusal to talk, emotional withdrawal and self-pity. It may end up in a cold war at home, sustained only by children, sex, social pressure, or image protection. Or it may end up in open warfare in the courts, where bitter ego decimating legal battles can be carried on for years as people endlessly confess the sins of a former spouse.
And this is in the most intimate, the most potentially rich, joyful, satisfying and productive relationship possible between two people on this earth. The P/PC lighthouse is there; we can either break ourselves against it or we can use it as a guiding light.

Our most constant relationships, like marriage, require our most constant deposits. With continuing expectations, old deposits evaporate. If you suddenly run into an old high school friend you haven’t seen for years, you can pick up right where you left off because the earlier deposits are still there. But your accounts with the people you interact with on a regular basis require more constant investment. There are sometimes automatic withdrawals in your daily interactions or in their perception of you that you don’t even know about. This is especially true with teenagers in the home.

Suppose you have a teenage son and your normal conversation is something like, “Clean your room. Button your shirt. Turn down the radio. Go get a haircut. And don’t forget to take out the garbage!” Over a period of time, the withdrawals far exceed the deposits.

Now, suppose this son is in the process of making some important decisions that will affect the rest of his life. But the trust level is so low and the communication process so closed, mechanical, and unsatisfying that he simply will not be open to your counsel. You may have the wisdom and the knowledge to help him, but because your account is so overdrawn, he will end up making his decisions from a short-range emotional perspective, which may well result in many negative long-range consequences.

You need a positive balance to communicate on these tender issues. What do you do?

What would happen if you started making deposits into the relationship? Maybe the opportunity comes up to do him a little kindness—to bring home a magazine on skateboarding, if that’s his interest, or just to walk up to him when he’s working on a project and offer to help. Perhaps you could invite him to go to a movie with you or take him out for some ice cream. Probably the most important deposit you could make would be just to listen, without judging or preaching or reading your own autobiography into what he says. Just listen and seek to understand. Let him feel your concern for him, your acceptance of him as a person.

He may not respond at first. He may even be suspicious. “What’s Dad up to now? What technique is Mom trying on me this time?” But as those genuine deposits keep coming, they begin to add up. That overdrawn balance is shrinking.

Remember that quick fix is a mirage. Building and repairing relationships
takes time. If you become impatient with his apparent lack of response or his seeming ingratitude, you may make huge withdrawals and undo all the good you’ve done. “After all we’ve done for you, the sacrifices we’ve made, how can you be so ungrateful? We try to be nice and you act like this. I can’t believe it!”

It’s hard not to get impatient. It takes character to be proactive, to focus on your Circle of Influence, to nurture growing things, and not to “pull up the flowers to see how the roots are coming.”

But there really is no quick fix. Building and repairing relationships are long-term investments.
Six Major Deposits

Let me suggest six major deposits that build the Emotional Bank Account.
Understanding the Individual

Really seeking to understand another person is probably one of the most important deposits you can make, and it is the key to every other deposit. You simply don’t know what constitutes a deposit to another person until you understand that individual. What might be a deposit for you—going for a walk to talk things over, going out for ice cream together, working on a common project—might not be perceived by someone else as a deposit at all. It might even be perceived as a withdrawal, if it doesn’t touch the person’s deep interests or needs.

One person’s mission is another person’s minutia. To make a deposit, what is important to another person must be as important to you as the other person is to you. You may be working on a high priority project when your six-year-old child interrupts with something that seems trivial to you, but it may be very important from his point of view. It takes Habit 2 to recognize and recommit yourself to the value of that person and Habit 3 to subordinate your schedule to that human priority. By accepting the value he places on what he has to say, you show an understanding of him that makes a great deposit.

I have a friend whose son developed an avid interest in baseball. My friend wasn’t interested in baseball at all. But one summer, he took his son to see every major league team play one game. The trip took over six weeks and cost a great deal of money, but it became a powerful bonding experience in their relationship.

My friend was asked on his return, “Do you like baseball that much?”
“No,” he replied, “but I like my son that much.”

I have another friend, a college professor, who had a terrible relationship with his teenage son. This man’s entire life was essentially academic, and he felt his son was totally wasting his life by working with his hands instead of working to develop his mind. As a result, he was almost constantly on the boy’s back, and, in moments of regret, he would try to make deposits that just didn’t work. The boy perceived the gestures as new forms of rejection, comparison, and judgment,
and they precipitated huge withdrawals. The relationship was turning sour, and it was breaking the father’s heart.

One day I shared with him this principle of making what is important to the other person as important to you as the other person is to you. He took it deeply to heart. He engaged his son in a project to build a miniature Wall of China around their home. It was a consuming project, and they worked side by side on it for over a year and a half.

Through that bonding experience, the son moved through that phase in his life and into an increased desire to develop his mind. But the real benefit was what happened to the relationship. Instead of a sore spot, it became a source of joy and strength to both father and son.

*

Our tendency is to project out of our own autobiographies what we think other people want or need. We project our intentions on the behavior of others. We interpret what constitutes a deposit based on our own needs and desires, either now or when we were at a similar age or stage in life. If they don’t interpret our effort as a deposit, our tendency is to take it as a rejection of our well intentioned effort and to give up.

The Golden Rule says to “Do unto others as you would have others do unto you.” While on the surface that could mean to do for them what you would like to have done for you, I think the more essential meaning is to understand them deeply as individuals, the way you would want to be understood, and then to treat them in terms of that understanding. As one successful parent said about raising children, “Treat them all the same by treating them differently.”
Attending to the Little Things

The little kindnesses and courtesies are so important. Small discourtesies, little unkindnesses, little forms of disrespect make large withdrawals. In relationships, the little things are the big things.

I remember an evening I spent with two of my sons some years ago. It was an organized father and son outing, complete with gymnastics, wrestling matches, hotdogs, orangeade, and a movie—the works.

In the middle of the movie, Sean, who was then four years old, fell asleep in his seat. His older brother, Stephen, who was six, stayed awake, and we watched the rest of the movie together. When it was over, I picked Sean up in my arms, carried him out to the car and laid him in the back seat. It was very cold that night, so I took off my coat and gently arranged it over and around him.

When we arrived home, I quickly carried Sean in and tucked him into bed. After Stephen put on his “jammies” and brushed his teeth, I lay down next to him to talk about the night out together.

“How’d you like it, Stephen?”
“Fine,” he answered.
“Did you have fun?”
“Yes.”
“What did you like most?”
“I don’t know. The trampoline, I guess.”
“That was quite a thing, wasn’t it—doing those somersaults and tricks in the air like that?”

There wasn’t much response on his part. I found myself making conversation. I wondered why Stephen wouldn’t open up more. He usually did when exciting things happened. I was a little disappointed. I sensed something was wrong; he had been so quiet on the way home and getting ready for bed.

Suddenly Stephen turned over on his side, facing the wall. I wondered why and lifted myself up just enough to see his eyes welling up with tears.

“What’s wrong, honey? What is it?”
He turned back, and I could sense he was feeling some embarrassment for the tears and his quivering lips and chin.
“Daddy, if I were cold, would you put your coat around me, too?”

Of all the events of that special night out together, the most important was a little act of kindness—a momentary, unconscious showing of love to his little brother.

What a powerful, personal lesson that experience was to me then and is even now. People are very tender, very sensitive inside. I don’t believe age or experience makes much difference. Inside, even within the most toughened and calloused exteriors, are the tender feelings and emotions of the heart.
Keeping Commitments

Keeping a commitment or a promise is a major deposit; breaking one is a major withdrawal. In fact, there’s probably not a more massive withdrawal than to make a promise that’s important to someone and then not to come through. The next time a promise is made, they won’t believe it. People tend to build their hopes around promises, particularly promises about their basic livelihood.

I’ve tried to adopt a philosophy as a parent never to make a promise I don’t keep. I therefore try to make them very carefully, very sparingly, and to be aware of as many variables and contingencies as possible so that something doesn’t suddenly come up to keep me from fulfilling it.

Occasionally, despite all my effort, the unexpected does come up, creating a situation where it would be unwise or impossible to keep a promise I’ve made. But I value that promise. I either keep it anyway, or explain the situation thoroughly to the person involved and ask to be released from the promise.

I believe that if you cultivate the habit of always keeping the promises you make, you build bridges of trust that span the gaps of understanding between you and your child. Then, when your child wants to do something you don’t want him to do, and out of your maturity you can see consequences that the child cannot see, you can say, “Son, if you do this, I promise you that this will be the result.” If that child has cultivated trust in your word, in your promises, he will act on your counsel.
Clarifying Expectations

Imagine the difficulty you might encounter if you and your boss had different assumptions regarding whose role it was to create your job description.

“When am I going to get my job description?” you might ask.

“I’ve been waiting for you to bring one to me so that we could discuss it,” your boss might reply.

“I thought defining my job was your role.”

“That’s not my role at all. Don’t you remember? Right from the first, I said that how you do in the job largely depends on you.”

“I thought you meant that the quality of my job depended on me. But I don’t even know what my job really is.”

Unclear expectations in the area of goals also undermine communication and trust.

“I did exactly what you asked me to do and here is the report.”

“I don’t want a report. The goal was to solve the problem—not to analyze it and report on it.”

“I thought the goal was to get a handle on the problem so we could delegate it to someone else.”

How many times have we had these kinds of conversations?

“You said …”

“No, you’re wrong! I said …”

“You did not! You never said I was supposed to …”

“Oh, yes I did! I clearly said …”

“You never even mentioned …”

“But that was our agreement …”

The cause of almost all relationship difficulties is rooted in conflicting or ambiguous expectations around roles and goals. Whether we are dealing with the question of who does what at work, how you communicate with your daughter when you tell her to clean her room, or who feeds the fish and takes out the garbage, we can be certain that unclear expectations will lead to misunderstanding, disappointment, and withdrawals of trust.

Many expectations are implicit. They haven’t been explicitly stated or announced, but people nevertheless bring them to a particular situation. In marriage, for example, a man and a woman have implicit expectations of each
other in their marriage roles. Although these expectations have not been discussed, or sometimes even recognized by the person who has them, fulfilling them makes great deposits in the relationship and violating them makes withdrawals.

That’s why it’s so important whenever you come into a new situation to get all the expectations out on the table. People will begin to judge each other through those expectations. And if they feel like their basic expectations have been violated, the reserve of trust is diminished. We create many negative situations by simply assuming that our expectations are self-evident and that they are clearly understood and shared by other people.

The deposit is to make the expectations clear and explicit in the beginning. This takes a real investment of time and effort up front, but it saves great amounts of time and effort down the road. When expectations are not clear and shared, people begin to become emotionally involved and simple misunderstandings become compounded, turning into personality clashes and communication breakdowns.

Clarifying expectations sometimes takes a great deal of courage. It seems easier to act as though differences don’t exist and to hope things will work out than it is to face the differences and work together to arrive at a mutually agreeable set of expectations.
Showing Personal Integrity

Personal Integrity generates trust and is the basis of many different kinds of deposits.

Lack of integrity can undermine almost any other effort to create high trust accounts. People can seek to understand, remember the little things, keep their promises, clarify and fulfill expectations, and still fail to build reserves of trust if they are inwardly duplicitous.

Integrity includes but goes beyond honesty. Honesty is telling the truth—in other words, *conforming our words to reality*. Integrity is *conforming reality to our words*—in other words, keeping promises and fulfilling expectations. This requires an integrated character, a oneness, primarily with self but also with life.

One of the most important ways to manifest integrity is to be *loyal to those who are not present*. In doing so, we build the trust of those who are present. When you defend those who are absent, you retain the trust of those present.

Suppose you and I were talking alone, and we were criticizing our supervisor in a way that we would not dare to do if he were present. Now what will happen when you and I have a falling out? You know I’m going to be discussing your weaknesses with someone else. That’s what you and I did behind our supervisor’s back. You know my nature. I’ll sweet-talk you to your face and bad-mouth you behind your back. You’ve seen me do it.

That’s the essence of duplicity. Does that build a reserve of trust in my account with you?

On the other hand, suppose you were to start criticizing our supervisor and I basically told you I agree with the content of some of the criticism and suggest that the two of us go directly to him and make an effective presentation on how things might be improved. Then what would you know I would do if someone were to criticize you to me behind your back?

For another example, suppose in my effort to build a relationship with you, I told you something someone else had shared with me in confidence. “I really shouldn’t tell you this,” I might say, “but since you’re my friend....” Would my betraying another person build my trust account with you? Or would you wonder if the things you had told me in confidence were being shared with others?

Such duplicity might appear to be making a deposit with the person you’re with, but it is actually a withdrawal because you communicate your own lack of
integrity. You may get the golden egg of temporary pleasure from putting someone down or sharing privileged information, but you’re strangling the goose, weakening the relationship that provides enduring pleasure in association.

Integrity in an interdependent reality is simply this: you treat everyone by the same set of principles. As you do, people will come to trust you. They may not at first appreciate the honest confrontational experiences such integrity might generate. Confrontation takes considerable courage, and many people would prefer to take the course of least resistance, belittling and criticizing, betraying confidences, or participating in gossip about others behind their backs. But in the long run, people will trust and respect you if you are honest and open and kind with them. You care enough to confront. And to be trusted, it is said, is greater than to be loved. In the long run, I am convinced, to be trusted will be also to be loved.

When my son Joshua was quite young, he would frequently ask me a soul-searching question. Whenever I overreacted to someone else or was the least bit impatient or unkind, he was so vulnerable and so honest and our relationship was so good that he would simply look me in the eye and say, “Dad, do you love me?” If he thought I was breaking a basic principle of life toward someone else, he wondered if I wouldn’t break it with him.

As a teacher, as well as a parent, I have found that the key to the ninety-nine is the one—particularly the one that is testing the patience and the good humor of the many. It is the love and the discipline of the one student, the one child, that communicates love for the others. It’s how you treat the one that reveals how you regard the ninety-nine, because everyone is ultimately a one.

Integrity also means avoiding any communication that is deceptive, full of guile, or beneath the dignity of people. “A lie is any communication with intent to deceive,” according to one definition of the word. Whether we communicate with words or behavior, if we have integrity, our intent cannot be to deceive.

**Apologizing Sincerely When You Make a Withdrawal**

When we make withdrawals from the Emotional Bank Account, we need to apologize and we need to do it sincerely. Great deposits come in the sincere words:
“I was wrong.”
“That was unkind of me.”
“I showed you no respect.”
“I gave you no dignity, and I’m deeply sorry.”
“I embarrassed you in front of your friends and I had no call to do that. Even though I wanted to make a point, I never should have done it. I apologize.”

It takes a great deal of character strength to apologize quickly out of one’s heart rather than out of pity. A person must possess himself and have a deep sense of security in fundamental principles and values in order to genuinely apologize.

People with little internal security can’t do it. It makes them too vulnerable. They feel it makes them appear soft and weak, and they fear that others will take advantage of their weakness. Their security is based on the opinions of other people, and they worry about what others might think. In addition, they usually feel justified in what they did. They rationalize their own wrong in the name of the other person’s wrong, and if they apologize at all, it’s superficial.

“If you’re going to bow, bow low,” says Eastern wisdom. “Pay the uttermost farthing,” says the Christian ethic. To be a deposit, an apology must be sincere. And it must be perceived as sincere.

Leo Roskin taught, “It is the weak who are cruel. Gentleness can only be expected from the strong.”

I was in my office at home one afternoon writing, of all things, on the subject of patience. I could hear the boys running up and down the hall making loud banging noises, and I could feel my own patience beginning to wane.

Suddenly, my son David started pounding on the bathroom door, yelling at the top of his lungs, “Let me in! Let me in!”

I rushed out of the office and spoke to him with great intensity. “David, do you have any idea how disturbing that is to me? Do you know how hard it is to try to concentrate and write creatively? Now, you go into your room and stay in there until you can behave yourself.” So in he went, dejected, and shut the door.

As I turned around, I became aware of another problem. The boys had been playing tackle football in the four-foot-wide hallway, and one of them had been elbowed in the mouth. He was lying there in the hall, bleeding from the mouth. David, I discovered, had gone to the bathroom to get a wet towel for him. But his sister, Maria, who was taking a shower, wouldn’t open the door.
When I realized that I had completely misinterpreted the situation and had overreacted, I immediately went in to apologize to David.

As I opened the door, the first thing he said to me was, “I won’t forgive you.”

“Well, why not, honey?” I replied. “Honestly, I didn’t realize you were trying to help your brother. Why won’t you forgive me?”

“Because you did the same thing last week,” he replied. In other words, he was saying, “Dad, you’re overdrawn, and you’re not going to talk your way out of a problem you behaved yourself into.”

Sincere apologies make deposits; repeated apologies interpreted as insincere make withdrawals. And the quality of the relationship reflects it.

It is one thing to make a mistake, and quite another thing not to admit it. People will forgive mistakes, because mistakes are usually of the mind, mistakes of judgment. But people will not easily forgive the mistakes of the heart, the ill intention, the bad motives, the prideful justifying cover-up of the first mistake.
The Laws of Love and the Laws of Life

When we make deposits of unconditional love, when we live the primary laws of love, we encourage others to live the primary laws of life. In other words, when we truly love others without condition, without strings, we help them feel secure and safe and validated and affirmed in their essential worth, identity, and integrity. Their natural growth process is encouraged. We make it easier for them to live the laws of life—cooperation, contribution, self-discipline, integrity—and to discover and live true to the highest and best within them. We give them the freedom to act on their own inner imperatives rather than react to our conditions and limitations. This does not mean we become permissive or soft. That itself is a massive withdrawal. We counsel, we plead, we set limits and consequences. But we love, regardless.

When we violate the primary laws of love—when we attach strings and conditions to that gift—we actually encourage others to violate the primary laws of life. We put them in a reactive, defensive position where they feel they have to prove “I matter as a person, independent of you.”

In reality, they aren’t independent. They are counter-dependent, which is another form of dependency and is at the lowest end of the Maturity Continuum. They become reactive, almost enemy-centered, more concerned about defending their “rights” and producing evidence of their individuality than they are about proactively listening to and honoring their own inner imperatives.

Rebellion is a knot of the heart, not of the mind. The key is to make deposits—constant deposits of unconditional love.

I once had a friend who was dean of a very prestigious school.* He planned and saved for years to provide his son the opportunity to attend that institution, but when the time came, the boy refused to go.

This deeply concerned his father. Graduating from that particular school would have been a great asset to the boy. Besides, it was a family tradition. Three generations of attendance preceded the boy. The father pleaded and urged and talked. He also tried to listen to the boy to understand him, all the while hoping that the son would change his mind.

The subtle message being communicated was one of conditional love. The son felt that in a sense the father’s desire for him to attend the school outweighed the value he placed on him as a person and as a son, which was terribly threatening.
Consequently, he fought for and with his own identity and integrity, and he increased in his resolve and his efforts to rationalize his decision not to go.

After some intense soul-searching, the father decided to make a sacrifice—to renounce conditional love. He knew that his son might choose differently than he had wished; nevertheless, he and his wife resolved to love their son unconditionally, regardless of his choice. It was an extremely difficult thing to do because the value of his educational experience was so close to their hearts and because it was something they had planned and worked for since his birth.

The father and mother went through a very difficult rescripting process, struggling to really understand the nature of unconditional love. They communicated to the boy what they were doing and why, and told him that they had come to the point at which they could say in all honesty that his decision would not affect their complete feeling of unconditional love toward him. They didn’t do this to manipulate him, to try to get him to “shape up.” They did it as the logical extension of their growth and character.

The boy didn’t give much of a response at the time, but his parents had such a paradigm of unconditional love at that point that it would have made no difference in their feelings for him. About a week later, he told his parents that he had decided not to go. They were perfectly prepared for this response and continued to show unconditional love for him. Everything was settled and life went along normally.

A short time later, an interesting thing happened. Now that the boy no longer felt he had to defend his position, he searched within himself more deeply and found that he really did want to have this educational experience. He applied for admission, and then he told his father, who again showed unconditional love by fully accepting his son’s decision. My friend was happy, but not excessively so, because he had truly learned to love without condition.

Dag Hammarskjold, past Secretary-General of the United Nations, once made a profound, far-reaching statement: “It is more noble to give yourself completely to one individual than to labor diligently for the salvation of the masses.”

I take that to mean that I could devote eight, ten, or twelve hours a day, five, six, or seven days a week to the thousands of people and projects “out there” and still not have a deep, meaningful relationship with my own spouse, with my own teenage son, with my closest working associate. And it would take more nobility of character—more humility, courage, and strength—to rebuild that one relationship than it would to continue putting in all those hours for all those people and causes.
In twenty-five years of consulting with organizations, I have been impressed over and over again by the power of that statement. Many of the problems in organizations stem from relationship difficulties at the very top—between two partners in a professional firm, between the owner and the president of a company, between the president and an executive vice-president. It truly takes more nobility of character to confront and resolve those issues than it does to continue to diligently work for the many projects and people “out there.”

When I first came across Hammarskjold’s statement, I was working in an organization where there were unclear expectations between the individual who was my right-hand man and myself. I simply did not have the courage to confront our differences regarding role and goal expectations and values, particularly in our methods of administration. So I worked for a number of months in a compromise mode to avoid what might turn out to be an ugly confrontation. All the while, bad feelings were developing inside both of us.

After reading that it is more noble to give yourself completely to one individual than to labor diligently for the salvation of the masses, I was deeply affected by the idea of rebuilding that relationship. I had to steel myself for what lay ahead, because I knew it would be hard to really get the issues out and to achieve a deep, common understanding and commitment. I remember actually shaking in anticipation of the visit. He seemed like such a hard man, so set in his own ways and so right in his own eyes; yet I needed his strengths and abilities. I was afraid a confrontation might jeopardize the relationship and result in my losing those strengths.

I went through a mental dress rehearsal of the anticipated visit, and I finally became settled within myself around the principles rather than the practices of what I was going to do and say. At last I felt peace of mind and the courage to have the communication.

When we met together, to my total surprise, I discovered that this man had been going through the very same process and had been longing for such a conversation. He was anything but hard and defensive.

Nevertheless, our administrative styles were considerably different, and the entire organization was responding to these differences. We both acknowledged the problems that our disunity had created. Over several visits, we were able to confront the deeper issues, to get them all out on the table, and to resolve them, one by one, with a spirit of high mutual respect. We were able to develop a powerful complementary team and a deep personal affection which added tremendously to our ability to work effectively together.
Creating the unity necessary to run an effective business or a family or a marriage requires great personal strength and courage. No amount of technical administrative skill in laboring for the masses can make up for lack of nobility of personal character in developing relationships. It is at a very essential, one-on-one level, that we live the primary laws of love and life.
Problems Are PC Opportunities

This experience also taught me another powerful paradigm of interdependence. It deals with the way in which we see problems. I had lived for months trying to avoid the problem, seeing it as a source of irritation, a stumbling block, and wishing it would somehow go away. But, as it turned out, the very problem created the opportunity to build a deep relationship that empowered us to work together as a strong complementary team.

I suggest that in an interdependent situation, every P problem is a PC opportunity—a chance to build the Emotional Bank Accounts that significantly affect interdependent production.

When parents see their children’s problems as opportunities to build the relationship instead of as negative, burdensome irritations, it totally changes the nature of parent-child interaction. Parents become more willing, even excited, about deeply understanding and helping their children. When a child comes to them with a problem, instead of thinking, “Oh, no! Not another problem!” their paradigm is, “Here is a great opportunity for me to really help my child and to invest in our relationship.” Many interactions change from transactional to transformational, and strong bonds of love and trust are created as children sense the value parents give to their problems and to them as individuals.

This paradigm is powerful in business as well. One department store chain that operates from this paradigm has created a great loyalty among its customers. Any time a customer comes into the store with a problem, no matter how small, the clerks immediately see it as an opportunity to build the relationship with the customer. They respond with a cheerful, positive desire to solve the problem in a way that will make the customer happy. They treat the customer with such grace and respect, giving such second-mile service, that many of the customers don’t even think of going anywhere else.

By recognizing that the P/PC balance is necessary to effectiveness in an interdependent reality, we can value our problems as opportunities to increase PC.
THE HABITS OF INTERDEPENDENCE

With the paradigm of the Emotional Bank Account in mind, we’re ready to move into the habits of Public Victory, of success in working with other people. As we do, we can see how these habits work together to create effective interdependence. We can also see how powerfully scripted we are in other patterns of thought and behavior.

In addition, we can see on an even deeper level that effective interdependence can only be achieved by truly independent people. It is impossible to achieve Public Victory with popular “Win/Win negotiation” techniques or “reflective listening” techniques or “creative problem-solving” techniques that focus on personality and truncate the vital character base.

Let’s now focus on each of the Public Victory habits in depth.

HABIT 4
THINK WIN/WIN
PRINCIPLES OF INTERPERSONAL LEADERSHIP

We have committed the Golden Rule to memory; let us now commit it to life.

EDWIN MARKHAM

ONE TIME I WAS ASKED TO WORK WITH A COMPANY whose president was very concerned about the lack of cooperation among his people.

“Our basic problem, Stephen, is that they’re selfish,” he said. “They just won’t cooperate. I know if they would cooperate, we could produce so much more. Can you help us develop a human relations program that will solve the problem?”

“Is your problem the people or the paradigm?” I asked.

“Look for yourself,” he replied.

So I did. And I found that there was a real selfishness, an unwillingness to cooperate, a resistance to authority, defensive communication. I could see that overdrawn Emotional Bank Accounts had created a culture of low trust. But I pressed the question.

“Let’s look at it deeper,” I suggested. “Why don’t your people cooperate? What is the reward for not cooperating?”
“There’s no reward for not cooperating,” he assured me. “The rewards are much greater if they do cooperate.”

“Are they?” I asked. Behind a curtain on one wall of this man’s office was a chart. On the chart were a number of racehorses all lined up on a track. Superimposed on the face of each horse was the face of one of his managers. At the end of the track was a beautiful travel poster of Bermuda, an idyllic picture of blue skies and fleecy clouds and a romantic couple walking hand in hand down a white sandy beach.

Once a week, this man would bring all his people into this office and talk cooperation. “Let’s all work together. We’ll all make more money if we do.” Then he would pull the curtain and show them the chart. “Now which of you is going to win the trip to Bermuda?”

It was like telling one flower to grow and watering another, like saying “firings will continue until morale improves.” He wanted cooperation. He wanted his people to work together, to share ideas, to all benefit from the effort. But he was setting them up in competition with each other. One manager’s success meant failure for the other managers.

As with many, many problems between people in business, family, and other relationships, the problem in this company was the result of a flawed paradigm. The president was trying to get the fruits of cooperation from a paradigm of competition. And when it didn’t work, he wanted a technique, a program, a quick fix antidote to make his people cooperate.

But you can’t change the fruit without changing the root. Working on the attitudes and behaviors would have been hacking at the leaves. So we focused instead on producing personal and organizational excellence in an entirely different way by developing information and reward systems which reinforced the value of cooperation.

Whether you are the president of a company or the janitor, the moment you step from independence into interdependence in any capacity, you step into a leadership role. You are in a position of
influencing other people. And the habit of effective interpersonal leadership is Think Win/Win.
Six Paradigms of Human Interaction

Win/Win is not a technique; it’s a total philosophy of human interaction. In fact, it is one of six paradigms of interaction. The alternative paradigms are Win/Lose, Lose/Win, Lose/Lose, Win, and Win/Win or No Deal.

- Win/Win
- Lose/Lose
- Win/Lose
- Lose/Win
- Win
- Win/Win or No Deal

Win/Win

Win/Win is a frame of mind and heart that constantly seeks mutual benefit in all human interactions. Win/Win means that agreements or solutions are mutually beneficial, mutually satisfying. With a Win/Win solution, all parties feel good about the decision and feel committed to the action plan. Win/Win sees life as a cooperative, not a competitive arena. Most people tend to think in terms of dichotomies: strong or weak, hardball or softball, win or lose. But that kind of thinking is fundamentally flawed. It’s based on power and position rather than on principle. Win/Win is based on the paradigm that there is plenty for everybody, that one person’s success is not achieved at the expense or exclusion of the success of others.

Win/Win is a belief in the Third Alternative. It’s not your way or my way; it’s a better way, a higher way.

Win/Lose
One alternative to Win/Win is Win/Lose, the paradigm of the race to Bermuda. It says “If I win, you lose.”

In leadership style, Win/Lose is the authoritarian approach: “I get my way; you don’t get yours.” Win/Lose people are prone to use position, power, credentials, possessions, or personality to get their way.

Most people have been deeply scripted in the Win/Lose mentality since birth. First and most important of the powerful forces at work is the family. When one chi
